CU AMIGA MAGAZINE SEPTEMBER 1996

# Editorial

**For the latter part** of the summer the Amiga software market is holding up much better than anyone expected. Although there have been delays aplenty in recent months, two eagerly-awaited programs have just arrived in and boy have we had fun with them. On the serious side of things OctaMED SoundStudio had Tony Horgan in rave mode for the best part of three weeks. We had to buy him a new set of headphones to try and save our eardrums. On the games side The Killing Grounds finally arrived (it should be in the shops as you read this) and drove me half insane. Late nights testify to its addictivity – and difficulty. TKG takes no prisoners. We're going to have to take a couple of days off to recover from the damage done to his ears and my eyes.

For those of you who have bought the CD-ROM issue of the magazine, welcome. We don't like to boast (well not too much anyway) but this CU Amiga Magazine Super CD-ROM is the best we've done by a long shot. Not only does it contain the brilliant Vista Lite, it is also packed with demos, images, mods and more which will keep you busy for a long time to come. And the icing on the cake has to be the reader entries. As you may have noticed we've been running a competition for reader CD entries in the following categories: music, utilities, artwork/graphics, games and demos we received plenty and the best are on the CD.

For those not yet using CD-ROM try checking out our new CD Amiga section for a look at the variety you are missing out on – and if you think CD technology is too expensive take a look at page 54: the Ultra CD-ROM has just upped the stakes at a lower price. See you next month.

Alan Dykes

Alan Dykes, Editor

The Killing Grounds 37

# Cover Story and Features

## 8 Vista Lite

If you want to create landscapes as backdrops for Workbench, for objects or for games then this is the right place to start.

## 21 The world of Aminet

With the recent revelation that Aminet (the on-line Amiga resource) is the world's biggest FTP site, we talk to its creator, Urban Müller, about how it got there and where it goes from here.

## 26 CU talks to Dex and Jonesy

Who are they? Only the hottest properties on the dance remix scene ... and they've got there using Amigas. Tony Horgan checks them out.

## Hints and tips

**When you're dealing with high quality high resolution renders it can be frustrating to find that all your big shot render has gone a bit Pete Tong. The most common problems are things like rock faces and enormous trees appearing right up in the foreground obscuring everything behind them. Here are some tips to help avoid disappointments.**

- **Don't put too much faith in low quality renders. Before starting an ultra quality render it's best to generate a medium quality version. This is normally good enough to let you know if you're looking straight at a lump of rock or if your panorama will be drawn in full.**

- **Don't place the camera among trees. The tree line setting is the maximum altitude at which trees will appear, so if you check that the camera's vertical position is above this you'll be okay. Otherwise you might just end up with very good view of a tree and nothing else.**

- **Run a screen grabber in the background. This can be useful if you are using the Show Render option to view the scene as it's rendered. Scenes are rendered from background to foreground, which means that sometimes excellent features are drawn over later in the rendering process. With a screen grabber you can assure you get a good shot of the picture if the foreground starts to obscure the best bits.**

▲ Vista Lite 3.0 makes it incredibly simple to render scenes like this with little more than a few menu selections and button clicks.

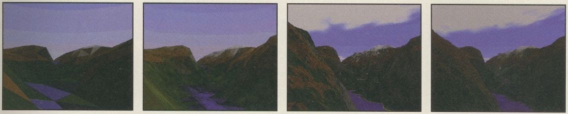
It's all here, complete and fully functioning in all its panoramic glory: Vista Lite 3.0 is yours with this month's CU Amiga Magazine. Now you can render incredibly realistic landscape scenes at the touch of button and let's face it, no Amiga is complete without a 3D landscape generator. Vista Lite 3.0 uses clever combinations of fractal maths and 3D representations of real world locations (Digital Elevation Maps - DEMs for short) to render snowy mountains, woodlands, lakes, rivers, pastures, scree slopes (ask your geography teacher) and little fluffy clouds. It couldn't be easier to use, but if you want to get more involved there's a host of options and parameters that can be tweaked, fine-tuned or cranked up to the max to ensure you get just the results you're after.

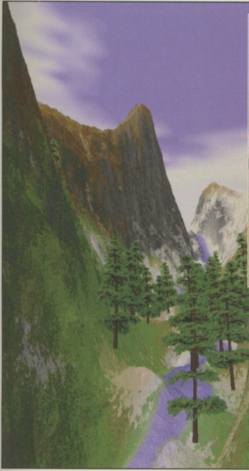
▲ This lake was originally a dry crater but one mouse click later and it's been turned into a lake.

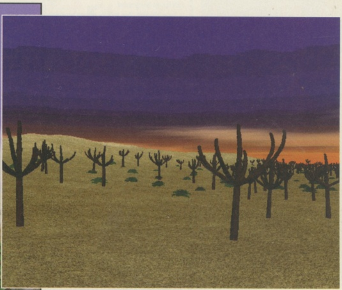
## Quality settings

There are four preset render quality modes which can be used a short cut to add or reduce the amount of detail and realism in your scenes. Rendering at lower quality is faster and useful for testing scenes before committing your Amiga to what could be a lengthy high quality rendering session. For example, it can sometimes be tricky to tell if your positioning is just right. A quick render will let you know if you've got a rock face obscuring your view.

Here are four versions of exactly the same scene, rendered with each of the four preset quality settings. Clouds and trees have been activated manually for the last two renders.







▲ **Above: spooky wastelands are just as easy to render as the lush rolling hillsides.**
**Left: this tree-lined river valley has been expanded vertically to emphasise the mountain peaks.**

## Quickstart

Once you have installed Vista Lite onto your hard drive according to the instructions on page 12 (CD users can run the program straight from the disc) you're ready to roll. When the program loads you'll be presented with grey screen split in half. On the right is the main control panel, while the window on the left is blank, awaiting a DEM file. The first thing to do is load a DEM from the hard drive or CD. Select Load Dem from the Load menu and then choose any .dem file from within the DEM drawer. Click Load DEM to confirm your selection.

You'll see that the window on the left is now filled with a splodgy kind of pattern. This is the DEM file, a kind of relief map of the area to be rendered. Green represents low lying areas, brown is intermediate and grey and white are areas of high altitude. The 'camera' (you vantage point) will initially be situated at the top of the map looking down (south). The visible area is indicated by the two lines extending from the camera blip. You can move the camera to any other point on the map by first clicking the Camera button from the control panel and then click on its new destination on the map. The 'target' defines the direction of the camera and can also be moved as with the camera, this time clicking the Target button first.

Now hit the Render button at the bottom of the control panel. After a few seconds you'll see a very crude representation of the landscape drawn out as if it were made from large flat triangles. While this looks totally unrealistic it's a quick way of testing out new maps and vantage points. You can re-render the scene at various levels of detail by making changes from the control panel, but the quickest method is to select a new setting from the Quality menu.

Continued overleaf ▶▶▶

## Upgrade now

**In order to get the most from Vista Lite 3.0 you can order the full instruction manual which details all of the program's features. You might also like to take a look at GeoMorph (brings your landscapes to life) and Vista Lite's big brother Vista Pro. See page 14 for details.**

▲ Try altering the camera's vertical position and pitch angle for better vantage points.

▲ Extreme settings of the focal length can lead to strange images. This is a maximum 'wide' example.

There are four selections: low, medium, high and ultra, and each takes longer to render than the one before. The other factor in the quality is the screen mode. From the Screen Mode menu you can select the resolution and amount of colours. If you want to watch the scene being drawn, select Show Render also (this will increase rendering times).

If you're happy with your camera position, select High or Ultra from the Quality menu and click on the clouds and one of the tree type buttons from the control panel. Now hit Render once again and put the kettle on or something. This time it will take a lot longer to render the scene but the result will be far more impressive. There's a progress monitor in the panel at the bottom of the screen. The Render counter goes up to 128 before it cleans up the render and displays it properly.

To save the picture to disk, select Save IFF from the Save menu, select you destination and filename then click Save IFF to write it to disk.

## Control panel

**The control panel isn't really as complex as it looks once you know your way around it. Here's a quick tour of what's on offer.**

**1. Target position. The three figures beneath the Target button display the target position. This can be altered by clicking on the map or entering new values in the boxes.**

**2. Camera position. Works just like the Target controls.**

**3. Distance. These specify the distance between the camera and the target ('dr' is the distance directly).**

**4. Camera orientation. These set the camera's angles of rotation through 360 degrees in three axes: bank, heading and pitch.**

**5. Sea level. This is maximum altitude of any sea that is rendered.**

**6. Tree line. In natural environments trees tend to grow up to a certain altitude and then stop abruptly. This sets the maximum altitude at which they will be rendered.**

**7. Snow line. This is the minimum altitude at which snow will lie on the ground.**

**8. Haze density. Use this to create anything from thick fog to a subtle haze effect.**

**9. Natural features. You can activate one of four types of tree, clouds and stars from these buttons. The River and Lake buttons require you to click on the map to specify where you want the water to appear. Vista Lite will ask you to confirm or alter the chosen altitude and is then intelligent enough to flow the water over any adjoining land lower than the specified source.**

**10. Tree density. Higher figures in this box lead to more dense woodland, with low numbers leading to just a sprinkling of trees.**

**11. Focal length. The Wide and Zoom buttons can be used as short cuts to alter the value. Possible values range from 1 to 180. Watch the lines extending from the camera on the map to see how this changes the view.**

**12. Tree size. Alter the size of the trees by changing this value.**

**13. Polygons. You can specify the amount of polygons that will make up your landscape from here. Higher settings make for smaller polygons and more of them, leading to smoother and more realistic hills (and longer rendering times).**

**14. Dither. Alter the amount of dithering used in the image by changing this value.**

**15. Texture. Four different types of texturing techniques are available. Try out each of them on a simple scene rendered at medium or high quality.**

**16. Pixel depth.**

## Animation

Why not go one better and create a whole animated fly-by animation of your 3D world? It's a piece of cake to set a sequence of frames that move through your landscape and build up into an animation. With a camera position and target set, select Generate from the Script menu and enter a name for your script (the movement sequence which acts as a guide for the animation) and then select Execute from the same menu, once again entering a filename for your animation. You can use the Preview option to test out the flightpath in either 2D or wireframe 3D.

Vista Lite does not detect whether the camera has passed through a landscape, so at times you will need to adjust the settings by hand to avoid the camera ducking beneath the ground. You'll normally be able to tell if this is going to happen by running a 3D preview. It's also worth picking a route across your landscape that doesn't show the edges dropping off into the inky blue void that surrounds it.

▲ Any Vista Lite DEM file can be rendered as a snowy mountain scene by merely selecting a winter season and lowering the snowline value.

The resulting file is in a special VAnim format. To view it you need to load the Viewer program found in the Vista Lite 3.0 drawer. Select your VAnim from the file requester and it will play automatically. Alternatively you can output single frames.■

Options via its Fast Expansion Bus include Modules such as a SCSI-2 Controller. An industry standard SIMM socket provides for up to 128Mb of auto-configuring 32-Bit FAST RAM (or up to 256Mb with the SCSI-2 option using its extra SIMM socket).

- May be disabled with Simple Keystroke on Boot Up for Full Games Compatibility, even with Badly Programed or Older Software!
- Battery Backed Self Recharge Real Time Clock
- High Performance Expansion with Full 32-Bit wide DMA
- PGA FPU Socket allowing Optional 50MHz, 68882 FPU
- Easy Trapdoor Installation - no modifications required and does not invalidate the Amiga's Warranty

**1230-IV Turbo** 50MHz 68030 & MMU 0Mb, 32-Bit Fast RAM - Expandable to 128Mb £179.95
**Fast 60 Nanosecond 4Mb SIMM RAM Expansion** 32-Bit, 72 pin *(Call for Larger SIMM prices)* £109.95
**Motorola Maths Co-processor** 68882 PGA type FPU, 50MHz £99.95
**SCSI-IV KIT** SCSI-2 Module for 1230-IV and 1260, with additional 128Mb SIMM socket £89.95

**THE WORLD's FASTEST A1200 '030 ACCELERATOR!**

## BLIZZARD 1260

SHIPPING NOW!

50MHz 68060 A1200 TURBO ACCELERATOR & MMU
0Mb, Expandable to 64Mb
*38.71MIPS with Single Sided 60 or 70 Nanosecond SIMM fitted*

**The Blizzard 1260 Turbo Accelerator Memory Board** offers Amiga A1200 owners FULL 68060 POWER with a board that simply plugs into the trapdoor slot! Now your A1200 will operate at twice or even three times the speed of an '040 based upgrade and up to five times the speed of a standard A4000! If you want THE FASTEST A1200 available, fit a Blizzard 1260 Turbo now!

- May be disabled with Simple Keystroke on Boot Up for Full Games Compatibility... Even badly Programed or Older Software!
- High Performance Expansion - Full 32-Bit wide DMA
- Battery Backed Self Recharge Real Time Clock
- Does not invalidate the Amiga's Warranty

**1260 Turbo** 50MHz 68060 & MMU 0Mb, 32-Bit Fast RAM - Exp. to 64Mb £599.95
**SCSI-IV Kit** SCSI-2 Module for 1260 and 1230-IV, with additional 128Mb SIMM socket £89.95
**Fast 60n/s 4Mb SIMM RAM Expansion** 32-Bit, 72 pin Single Sided *(Call for larger SIMMs)* £109.95

EASY TRAPDOOR INSTALLATION... No modification necessary. Reliable low heat output.

## BLIZZARD 2060

50MHz 68060 A1500/A2000 TURBO ACCELERATOR & MMU
0Mb - Expandable to 128Mb
*38.71MIPS with 60 or 70 Nanosecond SIMM fitted*

**The Blizzard 2060 Turbo Accelerator Memory Board** offers A1500 and A2000 owners the same specification as the Blizzard 1260 Turbo, but also includes built in SCSI-2 interface! So, if you want the fastest A1500/2000 around with FULL 68060 POWER... fit a Blizzard 2060 now!

**2060 Turbo** 50MHz 68060 & MMU with Built In SCSI-2 0Mb, 32-Bit Fast RAM - Expandable to 128Mb £699.95

GH
GORDON HARWOOD COMPUTERS
Gordon Harwood Computers Limited
Dept. CUA/87 New Street, Alfreton,
Derbyshire. DE55 7BP
**01 773 836781**
or FAX: 01 773 831040
**harwood@applelink.apple.com**

Please note: Memory, SIMM and FPU prices may change without warning due to exchange rate fluctuations. Please confirm price prior to ordering. CALL TO CONFIRM AVAILABILITY BEFORE MAKING A LONG JOURNEY TO VISIT US. OUR OPENING TIMES ARE... Monday to Saturday, 9am until 5pm

All Blizzard and Cyberstorm products use brand new MOTOROLA 680X0 series processors (not used as in some of our competitors' boards). They always run **WITHIN** the electrical timing specification laid down by Motorola to prevent any possible overheating/reliability problems. So, when you pay for a new 50MHz CPU for example, that's exactly what you get... not a 40, 33 or even a 25MHz CPU "clocked" to 50MHz! Look out for the **MOTOROLA MOTIVATED** logo - your guarantee of our commitment to quality and reliability - **BEWARE** of "clocked" CPUs!

*OUR RANGE HAS WON MORE AWARDS THAN ANY OTHER...*

*What the Magazines think...*

Blizzard products have consistently achieved the highest magazine accolades and awards!

***Amiga Shopper*** *said "...the Blizzard 1260 is destined to become the ultimate object of desire for A1200 owners."* - **91% STAR BUY Award**

***Amiga Computing*** *"...If you want the fastest Amiga in the World, get this board."* **92% BLUE CHIP Rating**

***Amiga Format*** *"...Ride on the fastest A1200 in the World..."* - **95% GOLD Rating**

### *How to Order from GH...*

BY PHONE: Simply call our order line. We accept VISA, Mastercard, Access, Switch, Connect, Delta AMEX and Lombard Creditcharge (most 'store cards' are Lombard eg. Dixons, Currys etc) - WITH NO TRANSACTION SURCHARGES!

BY POST or FAX: Include your name, address and daytime/evening phone/fax number plus order details. If charging a credit/debit card include... number and valid from/expiry date (and issue number with Switch cards). Make Cheques (please allow 7 days clearance), Drafts or Postal Orders payable to Gordon Harwood Computers Limited.

GH PRICES: Please remember to confirm prices in case you are looking at an 'old' magazine. Prices can change (up or down) before the magazine's cover month has passed. Please confirm before sending orders by post. Prices inc. VAT at 17.5%.

DELIVERY: We offer prompt shipment with fully insured express delivery options throughout the UK, Europe and Worldwide at a very modest cost. If ordering by post please call to confirm delivery charges.

EXPORT: Most items are available Worldwide, and at TAX FREE PRICES to non EC residents and most overseas UK Armed Forces Personnel (with CO's document). Please call us for confirmation of prices and carriage charges etc.

GH WARRANTY: Manufacturers' standard warranties apply or, ask about GH's comprehensive extended options which are always recommended for professional users to minimise costly down time. Ask GH for full details.

# cover disks

# Games demos

## Capital Punishment

**Warning! Parental advisory: Capital Punishment contains scenes of violence and partial nudity. This demo is not recommended for children under 15.**

**Capital Punishment, from Canadian company Click Boom, is a beat 'em up with amazing special lighting effects.**

**Because of its violent nature and a partially disrobed character it is not available directly via Workbench like all other programs on this CD-ROM. To run the demo you must boot your Amiga/CD32 with the Super CD-ROM III in your CD-ROM drive while holding down the left mouse button. This bypasses workbench and brings you straight into the demo. It also ensures that you do not inadvertently start the demo while looking for something else.**

**If you intend to boot with no startup sequence for another reason, make sure that Super CD-ROM III is NOT in your drive when holding down the left mouse button or you will go straight to Capital Punishment and have to start all over again.**

**Here's a couple of hints for playing it:**

**1. Find the moves first in two player mode. As you may notice we haven't printed any controls: we shouldn't have to. It's a beat 'em up.**

**2. Turn the sound up. The SFX and music are moody and brilliant.**

### IF YOUR DISK/CD WON'T LOAD

We go to great trouble to ensure that the CU Amiga Magazine cover disks will work on common Amiga models. However, if you do experience problems follow this simple guide.

We also vigorously virus check our cover disks on a branded virus checker. If some escape our attention we cannot assume responsibility for it.

1: Remove all unnecessary upgrades and peripherals, such as printers and modems. Some trapdoor expansions can also cause problems.

2: Follow the instructions on this and previous pages exactly.

3: Contact our 3.5 inch disk people, Disk Express, 5 Cross Lane, London N8 7SA. Tel: 01451 810788. Email:100714.334@compuserve.com

If they advise that the disk is faulty, fill in your details in the form below, and send this form, along with the faulty cover disk and a 25p stamped self addressed envelope to:

CU Amiga Magazine Disk Returns, 5 Cross Lane, London N8 7SA.

NAME:

ADDRESS:

TYPE OF AMIGA OWNED: ..............................................

DISK NUMBER:..............................................

DESCRIBE EXACTLY WHAT HAPPENS WHEN YOU TRY TO LOAD THE DISK:

## Brian Lara Cricket '96

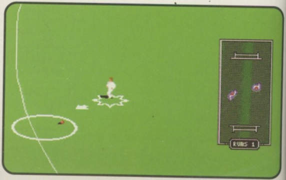
AMIGA MAGAZINE
INCLUDED WITH THE SEPTEMBER '96 ISSUE OF CU AMIGA - BRITAIN'S BEST AMIGA MAGAZINE
DISK 141
TOTALLY EXCLUSIVE!
Brian Lara Cricket '96
A ball tamperingly terrific demo of Audiogenic's latest cricket conversion
AMIGA MAGAZINE
All Amigas with 1Mb

**Disk number 141:** Brian Lara Cricket '96 could not be easier to load. Simply make sure that the disk is write protected (the black tab in the top left/right hand corner is clicked upwards leaving the hole exposed) then insert the disk into your Amiga and turn on the power supply. The demo takes about a minute to load, after which you will get a selection screen for England and Pakistan. You can use joystick and mouse. Choose who you want to be and the game will start. Then select your team and you're off.

When bowling, push your joystick forward and back, left and right to position the moving white line in front of the batsman, which places your ball. Then wiggle the joystick left/right to increase the power of the shot. When batting you can position your man right up until the bowler bowls, then it's a matter of using the eight directions on the joystick and timing your fire button correctly.

Fielding? Well, you just run after the ball with your nearest fielder. To return the ball to the bottom wicket keeper pull down on your joystick and press fire, to return to the top keeper press up and fire.

**CUCD3:** Brian Lara Cricket '96 is also on the CD in the Brian Lara drawer. This demo has been designed to run from floppy disk so you will have to dearchive it onto one to get it running. To do so have a blank formatted disk to hand. Double click on the icon in the Brian Lara folder to start the process, following the instructions and inserting the blank disk when asked. The demo will then be copied to this disk and you will be able to run it as described above. Happy cricketing and no ball tampering if you please, ladies and gentlemen.



AROUND THE WORLD WITH INTERNETFCI

# ITS JUST A LOCAL CALL

Local call from anywhere in Britain to anywhere in the World - Surf the Web for the cost of only a local call. Connect to sites from as far afield as New York, San Francisco, Tokyo, or Moscow with no online charges.

Introducing TheNet from InternetFCI, the world-class Internet provider. With TheNet you get the fastest and slickest connection to the information superhighway combined with:

- Full unrestricted Internet access.
- Full uncensored complete newsfeed.
- Unlimited E-mail.
- No online charges.
- World-wide Web and FTP Cache.
- High speed modems upto v34.
- AmiNet and other important Amiga Resources.
- Your own website.

# DISTANT SUNS 5.01
## DESKTOP PLANETARIUM
## CD ROM

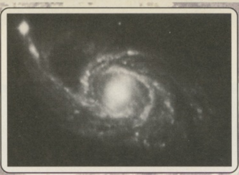
**Your Spaceship Awaits!**

- 1500 IFF images in 16 colors and 256 colors
- Megabytes of 16 color and 26 color anims
- 16 Million star Hubble Catalog
- 3-D planet rendering
- View images in 256 colors on AGA compatible Amigas
- Display night sky from 4713 BC to 10,000 AD
- Add your own comet and Asteroid data
- Comet Hyakutake and Hale-Bopp data included

**AmigaDOS 2.04 or newer, 2 megs Ram**
**& hard disk required.**
**NTSC and PAL versions available.**

**£55.99**

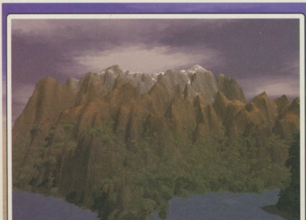
***Upgrade from Distant Suns 5.0 floppy - £22.99***
***Upgrade from Distant Suns 4.x floppy - £42.99***



## DISTANT SUNS 5.01 -Floppy version

- Virtual planetarium
- Display up to 10,000 stars and galaxies
- Comes with 25 full screen images
- Displays in 256 colors on machines with AGA capability
- View night sky from 4713 BC to 10,000 AD
- Set your point of view anywhere within solar system
- AREXX interface for external control

**£49.99**



# VistaPro 3.05

- **IFF 24 bit images up to 4096x4096 pixels**
- **Can handle 8 times the data resolution of VistaLite**
- **3-D Stereo Image rendering**
- **Place trees and buildings where you want them**
- **Use foreground and back ground images**
- **Expanded script language for animation rendering**
- **AREXX support for remote rendering**
- **Use Contiguous Landscapes for larger regions**

**Requires AmigaDOS 2.04 or newer**
**Minimum 4 MB RAM (6MB for AGA)**
**Larger images and landscapes need additional RAM**
**Hard disk and accelerator recommended**

**Special upgrade price - £29.99**

## TerraForm 2.10

- Design your own VistaPro Landscapes
- Mountain and crater tools
- 3-D wireframe view of landscape in progress
- Smooth and roughen landscapes
- Cut and paste landscape features
- TerraForm is NTSC only

**£24.99**

## MakePath 1.10

- Draw animation paths on topo Maps
- Automatically generates Vistapro/VistaLite Scripts
- Built in collision detection
- Emulate Glider, Helicopter, Motorcycle, Jet, Cruise Missile
- Add loops and spin paths to animations

**£24.99**

## GeoMorph 1.00

Create animations where the landscape, trees, clouds, and colors change before your eyes, Morph Landscapes! Grow trees! Change Seasons! Create moving clouds! Multiple morphs in a single Script!

**Requires Vista pro 3.0 or newer, AmigaDos 2.04 or newer, 2 megs RAM & hard disk**

**£34.99**

# Pro-GRAB™... *Rapid Frame Grabbing on your Amiga*

Now compatible with both VHS and S-VHS!

The revolutionary S-VHS ProGrab™ 24RT Plus with Teletext is not only the best way to get crisp colour video images into your Amiga, from either live broadcasts or taped recordings, it also costs less than any of its rivals. This real time PAL/ SECAM/NTSC* 24-Bit colour frame grabber/digitiser has slashed the price of image grabbing on the Amiga and, at the same time, has received rave reviews for its ease of use and excellent quality results. ProGrab™ has earned honours from just about every Amiga magazine and Video magazines too!

And... with ProGrab™ you needn't be an expert in Amiga Video Technology, a simple 3 stage operation ensures the right results - **Real Time, after time.**

## STAGE 1...

Select any video source with S-VHS or composite output. This could be your camcorder, TV with SCART output, satellite receiver, domestic VCR/player or standard TV signal passing through your VCR/player... the choice is yours.

Grab images with your camcorder including S-VHS...

**or,** Take a signal from a TV with SCART output...

**or,** Use the signal from your satellite receiver...

**or,** Grab TV or video pictures from your VCR's video output including S-VHS.

## STAGE 2...

With ProGrab's software, select an image you wish to capture using the on screen preview window and Grab (because the hardware grabs frames in real time, there's no need for a freeze frame facility on the source device). Once grabbed, simply download and view the full image on your Amiga screen. ProGrab also includes a Teletext viewing and capturing facility from either TV or satellite sources.

## STAGE 3...

Use the 'grabbed' image with your favourite word processor, DTP or graphics package.

ProGrab **really does** make it that simple!

ProGrab™...
Supports all recent Amigas and is also fully AGA Chipset compatible. You can render images in any Workbench screen mode resolution including HAM8 mode (Amiga RAM permitting).

ProGrab™...
Saves and Loads images in IFF/ILBM, IFF/ILBM24, JPEG, BMP, PCX, and TARGA file formats. ProGrab saves animations as Anim5 files and animations with sound (requires PCMCIA interface and separate sound sampler) as Anim5 + 8SVX files. A range of image processing effects, palette computing routines (AGA only) and dithering methods are also new to ProGrab Version 2.5.x Photogenics fully supports ProGrab with a custom 'Loader' to enable grabs directly from within the program - saving YOU time!

ProGrab™...
Software has built in mono and colour animation facilities. The number of frames is dependant upon your Amiga's RAM.

ProGrab™...
Release 2.5.x software now includes...

- SUPPORT FOR VIRTUAL MEMORY
  Allows the highest resolutions - Even with low memory Amigas (All Hard Drive Systems without the need for an MMU, requiring just 1Mb. Hard Drive Space).
- ADDITIONAL TELETEXT FACILITIES
  With either Terrestrial or Satellite TV signals.
- LARGER PREVIEW WINDOW
  Double Resolution and 4 times the area available with previous ProGrab software.
- INTERNATIONAL SUPPORT
  Now works with composite PAL, SECAM and NTSC Straight from the box!

(*Standard ProGrab hardware is PAL/SECAM/NTSC compatible. Interlace mode options are available with PAL & SECAM only. NTSC Only models are available to special order which then support the interlace mode fully. Please ask us for full details.)

## Pro-GRAB™ SVHS 24RT Plus

Camcorder User commented... "If you're looking for a high resolution 24 bit digitiser then, at this price, ProGrab 24RT represents great value for money."

ProGrab™ - Voted as **The Best Video Hardware** product for the Amiga. This is especially pleasing because the award comes from the Amiga Shopper magazine's readers...
Our **Satisfied** Customers!

ProGrab™ - Amiga Shopper **95% STAR Buy** and remarks like... "Sharp, crisp and faithful to the original colours, we were mightily impressed" and... "Highly Recommended. Whether you are a Videographer or a Graphic Artist, look to the ProGrab 24RT Plus. It's a winner"

Star Buy

ProGrab™ - Amiga Format **93% Gold Rating** and comments like... "ProGrab 24RT Plus is quite simply the digitiser to get", "Incredible value for money - no other digitiser offers so much for so little" and "Offers far more features than any other digitiser near the same price"

CU Amiga said ProGrab™ is... "Just the job for beginners and semi-professionals on a tight budget" and, "very hard to beat. For the money, nothing can touch it"

## For just £129.95...

ProGrab is supplied with everything you'll need ✣...

- **ProGrab™ 24RT Plus Digitiser**
- **Mains Power Supply Unit**
- **User Manual**
- **Latest ProGrab Version 2.5.x Software**
- **Parallel Port Connecting Cable**
- **Input sockets for Composite and SVHS.**

## PCMCIA Interface for A1200 and A600 - Only £34.95

ProGrab's optional PCMCIA Interface includes the latest version software and extends performance for serious/professional users - offering the following benefits...

- Faster Downloading Times (up to FIVE times quicker)
- Improved animation speeds of up to 11fps (mono) and 3.5fps (colour)
- Sound sampling and animation capabilities (separate sound sampler required)
- Saving of animations direct to your Amiga's hard drive
- Freeing of your Amiga Parallel Port for use by a printer or other parallel peripheral device

**ProGrab™ supports any Amiga with Kickstart 2.04 or later & a minimum of 1.5Mb. free RAM.**

✣ A video source cable will be required to match your own equipment set up - Ask for details.

Get **your** hands on NEW ProGrab Plus - Post or FAX your requirements (Quantity Trade Prices Available) on the order form provided OR, if you'd simply like further information please contact...

## MAGNUM RAM8

*A1200 8MB RAM Accelerator*

| | No FPU | 33MHz FPU |
|---|---|---|
| 0MB | £49.99 | £89.99 |
| 2MB | £89.99 | £129.99 |
| 4MB | £119.99 | £159.99 |
| 8MB | £199.99 | £239.99 |

Speed Increase of 2.3 times - 2.88mips ◆ Available with 0, 2, 4 or 8MB of 32-Bit RAM installed ◆ Uses Standard 72-pin Simms ◆ Optional PLCC Type FPU (floating point unit) ◆ Battery Backed Clock/Calender ◆ Finger CutOut to help Installation ◆ 0-4mb - pcmcia compatible (for use with overdrive, squirrel etc.) ◆ Zero Waite State Design.

FREE OPUS 4.12 worth £50

## 33MHz FPU

An FPU dramatically increases the speed of mathematical calculations (by up to 127 times!) and we would recommend it for users of graphical applications such as Image FX, Lightwave, Vista Pro, Imagine etc. Our FPU pack comes with the timing crystal and is compatible with most A1200 RAM/Processor Accelerators such as our Apollo/Magnum design, Hawk, Blizzard and Viper. If bought independent of our board the price is

£44.99

(or £40 with an A1200 board)

**7.12 MIPS OF SPEED**

FREE OPUS 4.12 worth £50

## MAGNUM 030/40

*A1200 40MHz '030 Processor Accelerator*

**LIMITED OFFER PRICES**

| | No FPU | 33MHz FPU |
|---|---|---|
| 0MB | £139.99 | £179. |
| 2MB | £179.99 | £219. |
| 4MB | £209.99 | £249. |
| 8MB | £289.99 | £329. |
| 16MB | £399.99 | £439. |

Speed Increase of over 5.6 times - 7.12mips ◆ 680EC30 Processor running at 40MHz (NEW 40MHz chip - NOT Overclocked) ◆ Up to 128mb of RAM can be added ◆ Available with 0, 2, 4, 8 or 16mb of 32-bit RAM Installed (call for higher SIMM sizes) ◆ Kickstart ReMapping ◆ Optional SCSI-II interface ◆ Can accommodate a 72-pin industry standard SIMM ◆ Optional PLCC type FPU (Floating Point Unit) ◆ Battery Backed Clock/Calender ◆ PCMCIA compatible so you can still use products such as OverDrive HD or CD/Zappo CD-ROM or Squirrel ◆ Zero Waite State Design.

### SCSI-II Option

The Magnum '030/40 can also be expan via our warranty safe SCSI-II interface support up to 6 SCSI devices with direc access to the '030 processor and memory ultra-fast access. Our controller is also compatible with the Viper-II card. £79

## PRO SYSTEM

*Complete A1200 Hard Disk Kits*

FREE OPUS 4.12 worth £50

**3 YEAR WARRANTY**

Yes, at long last, a professional way to install a high capacity hard disk without cardboard & glue! Our packs offer you our exclusive and copyrighted Brack-It 1200 Fitting System & a choice of high speed/low cost hard disks.

**NEW**

### Brack-It 1200 Fitting System

Designed to accommodate the newer drives on the market offering high capacity & speed at great prices. Our pack includes robust steel fitting brackets, all Cables for power and data, Instructions & 7 disks FULL of HOT software such as Directory Opus 4.12 (worth £50), MUI 3, MCP, Galaga AGA, Virus Checker, Mods, ReOrg, ABackup and MUCH MORE. All software can be installed with our custom click 'n' go system. All drives are pre-installed with the system software & above disks - unlike others we provide the disks just in case!

## SATURN

*External 1Mb Floppy Drive for all Amigas*

FREE OPUS 4.12 worth £50

Compatible with ALL Amigas ◆ High Quality SONY Drive ◆ Robust Metal Case ◆ Anti-Click as Standard ◆ Enable/Disable Switch ◆ Low Power Consumption ◆ Thru Port for Extra Drives £49.99

## POWERCOPY PROFESSIONAL 3

*Hardware & Software Disk Backup Solution for all Amigas*

We have yet to discover a program that this can't backup. Ideal to protect your expensive software library.

£29.99 or £20 with a drive

**EasyLedgers 2** - The ONLY full accounts package, Amiga Format Gold - *Call about Trail Offer - Demo Disk available - Hard Disk & 2mb RAM Required, £119.99 (limited offer price)

**GP Fax** - Send Faxes to and from your Amiga. Even Fax directly from your application. Amiga Format Gold - Amiga Computing 9/10 - Fax Compatible Modem Required - £44.99

**Image FX 2.6** - Without doubt the most complete Image Processing Package there is for the Amiga. Amiga Format Gold - CU Award - 2mb & Hard Disk Required - £149.99

| | |
|---|---|
| A500 512k RAM Expansion | £17.99 |
| A500plus 1mb RAM Expansion | £26.99 |
| A600 1mb RAM Expansion<br>ALL with a FREE Opus 4 worth over £50 | £26.99 |
| 10 2S/DD Disks & Colour Labels | £3.99 |
| 50 2S/DD Disks & Colour Labels | £14.99 |
| 100 2S/DD Disks & Colour Labels | £27.99 |

## SOCCER MOUSE

*for all Amigas*

IDEAL GIFT FOR THE FOOTBALL MANAGEMENT GAME PLAYER ◆ High Resolution 400dpi ◆ 2 MicroSwitched Buttons ◆ Includes a FREE Pitch Marked Mouse Mat

~~£19.99~~

**VERY LIMITED STOCKS** £10

OR £15 with 3 Games

**PREMIER MANAGER 2, SPACE CRUSADER & ZOOL 2**

## TURBOPRINT 4

*Printer Enhancement Software*

If you have a printer - you MUST get TurboPrint 4.1. It radically enhances the printouts you normally get by replacing the Amiga Printer System with the Faster and Visibly Better TurboPrint System. £49

Options include Poster Printing, Co Correction, Dithering, Colour Balan On-Screen Preview and Much Mor Most printers are supported - call check. Amiga Shopper 90%.

## New Generation Graphics Board

Phase 5 have announced that they are releasing a new generation CyberVision graphics board for big box Amigas. Called the CyberVision 3D it will be compatible with Zorro 2 and have three expansion slots. The board is designed to work not only in A2000/3000 and A4000 but also in the newer tower systems available from various German suppliers.

Featuring a new graphics chip, Virge by S3, the boards will be able to handle more complicated graphics and rendering than the current model.

Phase 5 are saying that it will be available with modular upgrade capability so that you can buy a basic model or an expanded, more capable version according to your budget. Options for the expanded version include more Video RAM, a scandoubler switch and an MPEG decoder.

Prices are currently quoted as ranging from DM 449 (£215) for the basic unit with 2Mb Video RAM to DM1047 (£500) for a 4Mb unit with Scandoubler and MPEG.

## Escom Problems Escalate

Now that the Amiga has been sold new problems have come to light over AT's former parent company. Apparently the losses they reported at the end of the financial year were understated and the true extent of their shortfall is estimated to be over DM180m (over £80m).

Escom has filed for protection from creditors in Germany and they have announced the closure of 65 'unprofitable' stores here in the UK with hundreds of redundancies. The fate of the rest of the former Rumbelows remains in the balance.

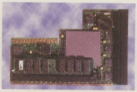
One result of the Amiga Technologies sale and the closure of the Escom stores though is that other retailers now seem more interested in stocking Amiga.

Escom opened the stores in Britain keen to start a price war for computers in the high street, but the policy now seems to have backfired, much to the delight of other chains. Even in Germany things are not going so well and management quote stock depreciation as one of the biggest difficulties on the balance sheet. They are currently restructuring the company, but without, as we all know, the Amiga. See page 19 for more on the VIScorp takeover.

## Blizzard Goes Green

Phase 5 are once again innovating with the announcement that they are launching a Blizzard 1240 for Tower A1200s which will be available for under £300, providing quite a performance punch for the pound.

The 1240 will be based on recycled 40MHz 68040 chips. The board will only be available for Tower systems because the chips operate at considerable temperatures and need fan cooling. Tower systems using the board will be similar in specification to the new Eagle 1200 Tower which uses the same chip.



▲ **Phase 5: soon to release a Blizzard 1240 for the Tower A1200 for under £300!**

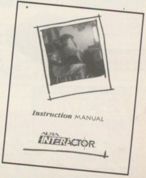
Phase 5 are still confident about releasing a new AmigaOS compatible PowerPC based computers by next year. And their PowerUP project (PowerPC accelerator boards for current Amigas) continues, with product expected at the end of the summer for developers.

However they still do not appear to have made any reconciliation approach to Amiga Technologies or VIScorp, after criticising AT and the pace of the takeover. Considering last month's legal announcement by the Amiga's new owners maybe this go it alone approach by Phase 5 is destined to change soon.

## Shock Waves

A Manchester company have announced plans to ship in an American games accessory for sale in the UK. The Aura Interactor is intended to enhance the gaming experience by providing players with feeling as well as sight and sound.

The device has been developed as a by-product of Star Wars technology designed to reduce vibrations, but reverses the concept and creates them instead. It involves amplifying the bass signals from a game and sending them through an output source: in this case a bone shaking back pack. It can be used for films as well, to give you a feeling of being part of the action or even with music to give you a sense of actually standing beside one of those horrifying body-shaking bass bins at night clubs. In the interests of science we will be testing one next month!



# MORE POWER

NEW

TOP QUALITY DISK DRIVE WITH BUILT-IN DISK COPIER AND ANTI-VIRUS PROTECTION!

## 3.5" FLOPPY DISK DRIVE

- 3.5" FLOPPY DISK DRIVE STORAGE SYSTEM.
- PLUGS DIRECTLY INTO ALL AMIGA™ MODELS.
- BUILT IN ANTI-VIRUS PROTECTION.
- BUILT -IN SYNCRO EXPRESS™ - A POWERFUL DISK BACK-UP SYSTEM.
- SUPPLIED WITH FULL SYNCRO EXPRESS SOFTWARE AND INSTRUCTIONS.
- TOP QUALITY SONY DRIVE MECHANISM.

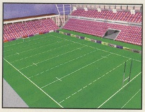
# Alternative Rugby League

With the launch of the Super League, Sky TV are making a big bid for the viewing public's time as far as Rugby League is concerned. Us southerners might scorn the game (like we do Tetleys and other water-weak brews), but as Union loses its amateur status the two games are probably destined to become more alike. And so the licenced Super League rugby game Alternative have just announced could be good practice for those who can't figure out why the scrums are so small and what all those shoulder pads are worn for. It should be previewable next month. In the meantime check out the PC grabs below.



# Competition Winners

Over the last few months we've run some stonking competitions. Sadly, for one, the object has been discontinued. We speak of course about the Walker, now overtaken by VIScorp and other events. Nevertheless the competition generated a massive response and the winning entries (winning an Amiga each, remember) are as follows. The answers to the questions and winners of the Q-Drive and the Pinball Madness competitions are also included.

**Walker**

**1st Prize:** The Amiga Millennium – "The next Generation Amiga should take the technology into the next century."

*Tony Fryer, Clavernam, Somerset.*

**2nd Prize:** The Elite – "A cut above the rest, just like the game of the same name."

*Robert Gaudy, Warrington, Cheshire.*

**Q-Drive**

1. The headquarters of Amiga Technologies is in Bensheim.
2. The Amiga Internet package is called The Surfer.
3. The Average capacity of a CD is 650Mb.

*Nigel Simpson, Norwich.*

**Pinball**

1. The table is Night of Demons.
2. The company was Liquid Dezign.
3. Sorry folks, although Roger Daltrey sang it, Pete Townsend wrote it.

The winners with all answers correct are:

*MR Usher,*
*Stockport*
*Adrian Gramm,*
*Kettering*
*Brendan White,*
*Tubbercurry, Ireland*
*Kevin Coady,*
*Mablethorope, Lincs*
*Paul Smith,*
*Welwyn Garden City*

# VIScorp GmbH Gets Go-Ahead

Despite an official fax from Petro Tystchschenko at the end of last month confirming VIScorp's purchase of Amiga Technologies, it appears that as far as the Americans were concerned the deal didn't go through until July 19, according to a document called 'An Open Message To The Amiga Community' by Bill Buck, VIScorp's CEO, released on July 24. It stated that the delays had been due to the bankruptcy of Escom AG (reported on page 17) and Amiga Technologies.

VIScorp have been in negotiations with "at least 11 different banks or companies that had claims to be the 'owners' of the technology and/or the inventory", which is why, they claim, not much has been said up until now.

From the statement it seems that Amiga Technologies GmbH is being scrapped completely and replaced by VIScorp GmbH, a process that will take at least a month. Mr Tyschtschenko will remain as General Manager jointly with the VIScorp placed Raquel Velasco. They are currently looking for a distribution manager in Europe and are promising slow but steady progress.

▲ Although Amiga Technologies GmbH will no longer exist, Petro Tyschtschenko (left) will continue to jointly manage the new VIScorp GmbH, according to a statement released by Bill Buck (right) on July 24. The new company is now looking for a European sales and marketing manager for Amiga.

# Aminet:

## Born Free

**Aminet has recently become the world's largest archive of freely distributable software. So what makes it tick?**

It's true: Aminet is home to more freely distributable software than any other archive, for any platform. This is one area in which the PC world cannot touch the Amiga scene – because, despite the total global domination of the machine, there really isn't a PC 'scene' as such, at least not anything that compares to the community of Amiga users.

When the concept of public domain software took off soon after the launch of the Amiga, I seemed to spend day after day trying to explain to non-Amiga users exactly why someone had created this amazing demo/game/utility but expected no payment in return. These attempts were mostly futile – let's face it, life doesn't lead us to expect something for nothing. It's only with the rise of shareware as a means of selling commercial software that the rest of the world has got any kind of a grip on the whole thing, so long as there's an underlying motive, some promise of cash at the end of the freely distributable rainbow. That's mainly what has held back the PD scene on other platforms, while the Amiga's has flourished and developed year after year. Distribution of this software was, and still is, split between bulletin boards, Internet WWW and FTP sites, floppy disks and more recently CD-ROM compilations. However, until Aminet there was no single definitive source for freely distributable Amiga software, although Fred Fish had a good crack at it with his vast Fish Disk series.

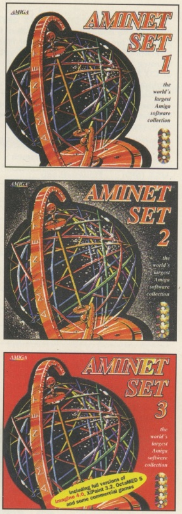
### Get it on CD too

**Even if you don't have a modem or Internet access you can still reap the benefits of Aminet via the regular CD-ROMs (available from most PD houses). These are now compiled every couple of months from all the latest software that has been uploaded to the archive. The first Aminet CD was dated March 1994 and the next CD off the blocks will be Volume 13 dated August 96. You'll remember we kicked off our cover CD series with a disc based on Aminet 7 – a tough act to follow! In addition to the bi-monthly CDs, a quarterly series of Aminet Set packs are released, made up of four CDs of software. With a collection of Aminet CDs to hand you have a world of Amiga software at your fingertips.**

### Enter Aminet

To get to the bottom of the Aminet story, you need to go back to January 1992. Amiga enthusiast Urban Müller took over the running of a small archive at a local students' club in his native Switzerland. It was called amiga.physik and was handled by a 50MHz 68030 Amiga, stored on a 50Mb hard drive, a machine donated by the Swiss arm of Commodore (remember them?). Urban was surprised at the amount of people that regularly logged onto the archive, around 40 each day, and decided it was worth turning into something more substantial. He developed a system that would generate a list of all the latest uploads (the 'Recent' list) and also a brief text file for each upload detailing its size, who supplied it and so on (the 'Short' file).

Later that year, a 250Mb Amiga archive called ab20 was shut down and demand for on-line Amiga software outstripped the supply. Many turned to amiga.physik as the next best alternative, but there were too many people trying to access this one relatively small archive. Urban appealed for help through the #amiga channel of the IRC (Internet Relay Chat) and Peter Sjostrom offered to run a mirror of the original site. This meant that users could access either site, the contents of which would be exchanged (mirrored) every day, thus



AMIGA
AMINET SET 1
the world's largest Amiga software collection
AMIGA
AMINET SET 2
the world's largest Amiga software collection
AMIGA
AMINET SET 3
the world's largest Amiga software collection
Including full versions of Imagine 4.0, XiPaint 3.2, OctaMED 5 and some commercial games

▲ The Aminet Set collection: the definitive archive of freely distributable Amiga software.

▼ Classic demos like Jesus on Es used the Aminet for worldwide distribution, as do the current crop of demos.

## Try it for yourself and see

**Anyone can use the Aminet archive from anywhere in the world for the price of a local phone call (or for free if you have access to a direct Internet connection). If you don't yet have Internet access, check out our Comms Bible and cover disks which came free with the June 1996 issue of CU Amiga Magazine and call Internet FCI on 01273 763000 who can provide UK residents all they need to get on the Net.**

**Now you're connected, point your FTP client software at one of the following Aminet mirrors. Some countries have more than one mirror. A full list can be obtained from the ReadMe document on any Aminet CD or from these on-line Aminet archives.**

| Location | Name | IP Address | Path | Files |
|---|---|---|---|---|
| UK | sunsite.doc.ic.ac.uk | 155.198.1.40 | pub/aminet/ | all |

| Spain | ftp.gui.uva.es | 157. 88.36.190 | pub/aminet/ | 1,000 |

reducing the demands of the Swiss archive. It was then, in May '92, that amiga.physik officially became Aminet.

Next came a 1.5Gb hard drive to expand the amount of available software, and gradually more offers came in from people around the world who were willing to maintain mirrors of the site. Once that snowball had started rolling, with more downloads leading to more uploads, Aminet was up and running.

It was all going well until the university which housed the amiga.physik archive demanded it was shut down due to the large amount of traffic it was attracting (that's traffic in the sense of people accessing the site, not tourists driving past to get a glimpse of it). Closing it down was not an option for those involved, so it was moved to a system maintained by Chris Myers in the USA.

> **“Work on Aminet itself has been unpaid from the beginning, however later my work on the CDs compensated for that.”**
>
> **Urban Müller**

Since then this has been the home of Aminet, from which all the mirror sites are derived. The whole thing is now generally operated by Urban Müller over the Internet from Switzerland. We spoke to him to find out more.

**CU: How is the source Aminet archived stored and maintained?**

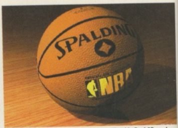
**UM:** Currently, the 'master' copy of Aminet is located at wuarchive.wustl.edu. This is a 250MHz DEC Alpha with 60Gb of disk space (located at Washington University in St.Louis), of which Aminet uses 6Gb. One 9Gb drive was donated to the maintainers of wuarchive by Aminet, as well as close to a dozen drives to other mirrors.

**CU: Does Aminet take up a lot of your time?**

**UM:** When I'm working on Aminet CDs it's a full time job. In between those, I can do other things at the same time.

**CU: What are the the advantages for you?**

**UM:** First of all, I have the same advantage as all users of Aminet: a huge, single collection of easy to find Amiga software. That's why I started it. Financially, the work on Aminet itself has been unpaid from the beginning, however later my work on the CDs compensated for that.



▲ Aminet stores thousands of pictures, like this Real 3D render.

**CU: What are the advantages for those who upload software?**

**UM:** Same thing again: since every uploader is a downloader as well, he or she gets a large collection of other Amiga software thanks to other uploaders. Additionally, they make sure that their software gets spread around to lots and lots of other Amiga users who appreciate their work and, in the case of shareware, may pay for it. Finally, authors of uploaded software currently can get a free Aminet CD (send HELP to aminet-server@aminet.org) but this policy will be more restrictive starting with CD 14.

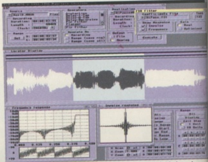
**CU: How exactly should we pronounce 'Aminet'?**

**UM:** I don't really know. In German (I'm Swiss, this is my native language) it's 'Ah-mee-net' (with the Ah as in father, just like the way we pronounce Amiga) but when the discussion on how to pronounce it in English first came up, it turned out that most English speaking people pronounce it 'Amy-net', so I'd declare that official. On CD 12 I used some empty space to add a sample with the correct pronunciation.

**CU: Aminet has been very important in the survival of the Amiga scene since the demise of Commodore, has it not?**

**UM:** I agree. Aminet couldn't do without the masses of freely distributable software for the Amiga, and those masses couldn't be distributed reasonably without something like Aminet. The PD scene on the Amiga is now self-sustaining.

**CU: Why do you think the Amiga has such a unique varied and vibrant shareware scene (unlike any other platform)?**



▲ Superb applications are also available, such as AudioLab 16 shown here.

GOTTA CHECK OUT THIS ADDRESS!
HEY GUYS! GET READY... HERE COMES SOME CHUMP WHO JUST SCREAMS MONEY!
LET'S MAKE 'IM FEEL WELCOME!
CHIK CHIK

▲ You can even get digital comics from Aminet!

**UM:** Amiga users are a special crowd. They're more technically interested and maybe more educated. But what really makes them write all that wonderful software is, in my opinion, one thing: a sense of community. Everyone finds himself using dozens of free programs written by other Amiga users and tries to compensate them for that by using his own skills. With software distribution so easy today I really wonder why all the other platforms are so far behind in terms of freely distributable software.

**CU: What are the criteria for uploads which are allowed onto the Aminet? Are there certain rules which must be followed (eg. proof of copyright ownership, offensive material etc)?**

**UM:** We do not rate quality. Tastes differ; whatever we dislike is almost certain to find users among the many, many potential downloaders. Therefore, everything that's legal is accepted.

We are very strict with legality though. As soon as there is a hint of a copyright problem (for example in mods covering a copyrighted song) the upload is removed. Doubtful material is not worth risking the existence of Aminet.

Proof of copyright ownership in every case is practically impossible. However we've had almost no pirate uploads in the past, and any that slipped through our checks were reported to us quickly so we could remove them. Same goes with offensive material and viruses.

**CU: Are you seeing an increase in the number of Aminet uploads?**

**UM:** The number of uploads has stabilised on a high level. However the size of uploads is constantly increasing, so the total stream of bytes is growing all the time.

**CU: Some have criticised Aminet CDs for making a profit from the good will of those who upload software to Aminet.**

**UM:** Aminet is a free distribution service that uploaders may or may not want to use. Many uploaders are making a profit from that themselves (shareware, commercial demos) so they certainly won't have a problem with us getting paid for our efforts. Freeware authors are compensated by getting a large, accessible (we pay for disks) and well-organised archive that they would not be getting if everything were unpaid. If anyone has a problem with our paid work on the CDs, they can exclude their uploads from the CD using a special header in the .readme, but still use Aminet for distribution.

> **“I really wonder why all the other platforms are so far behind in terms of freely distributable software.”**
>
> **Urban Müller**

**CU: How big do you think Aminet will get?**

**UM:** Currently we have 31700 uploads (July 16) which use up 6.2Gb of diskspace. Where it's going to end? No idea. There's not the slightest hint that it's going to. ■

**Tony Horgan**

Abe95I ( samakuu@jet.es )
Ham & Hooey's city (Hellcon)

STAR TREK
DEEP SPACE NINE

▲ Many artists use Aminet as a test bed for their work. Some are more original than others of course: you'll find plenty of renders taken from stock Star Trek and Deep Space Nine objects but also plenty of highly original creations.

## Types of 'PD'

**Many users of freely distributable (FD) software mix up the terms used. Aminet accepts all of the types listed below, however in the cases of restricted programs they would like to see them marked as such in the description. So, here are the various types.**

**Public Domain (PD) - The author of the software places no restrictions on the use of the program. You can even resell it. The term PD is often misused to mean all types of FD software.**

**Freeware - Free of charge, but the author retains all rights to the software.**

**Gnu Public License (GPL) - Free of charge, but must always be distributed with source so others can modify it.**

**Shareware - Distribution is free, but continued use costs money.**

**Giftware, Cardware - Like shareware, but the author asks for a gift or postcard in case of continued use.**

**Crippleware - Crippled shareware. The program is not fully usable until you register it; it could for example have nerve-racking requesters all over.**

**Demos - Heavily restricted versions of commercial software. An example would be a paint program without a save function.**

## DATAFLYER SCSI+

### Now includes CD ROM drivers and instructions.

The Dataflyer is a 16 bit SCSI II controller card that converts the signals on the internal IDE interface to also run SCSI devices at the same time as the IDE hard drive.
The Dataflyer SCSI+ will operate up to 5 SCSI devices such as CD-ROMS, hard drives, Syquest removable drives, tape back up drives etc. Unlike other SCSI interfaces, the Dataflyer SCSI+ is compatible with all known accelerators etc and it does not stop you from utilising any of the important expansion ports on your A1200/A600. The Dataflyer SCSI+ easily installs into the A1200/A600 (simply pushes in, no need to remove the metal shield) and provides a 25 way D connector through the blanking plate at the back of the A1200. *Full instructions and software supplied.*

**SURF SQUIRREL RRP £99.99** SALE PRICE £89.99

**DATAFLYER SCSI+ ONLY £69.99**
**SQUIRREL SCSI INTERFACE ALSO AVAILABLE £59.99**
**PCMCIA fitting SCSI interface**

## DISCOLOGY

Discology is the ultimate in disk copying power for the Amiga. The package comprises the Discology Disk, manual and Discology cartridge for making copies of heavily protected programs with an external disk drive. Discology will also format disks, check disks for errors etc.
*PLEASE PHONE FOR A FULL INFORMATION SHEET*

**AMAZING SPECIAL OFFER**

**£19.99 EACH OR BUY BOTH FOR £24.99**

## ANTIVIRUS

ANTI VIRUS
PROFESSIONAL

Anti Virus Professional is the most powerful tool for detecting and removing viruses. Anti Virus pro will check and device hard drives, floppy disks and *even CD ROM drives* for viruses. Very straight forward to use, includes a full 50 page manual.

***ORDER NOW BEFORE A VIRUS DESTROYS YOUR SYSTEM !!!***

**Meet the boys who have turned the dance music scene on its head and taken on the biggest names in the business, armed with two Amigas and a copy of ProTracker.**

It's cheesy grins all round for the new dynamic duo of dance music. ▶

# Dex & Jonesey

They're currently the hottest property in dance music. They've had two consecutive number one placings in the Record Mirror Dance Chart. The biggest names in the business are queuing up to have this pair of Dartford DJs work their magic and give them a credible cross-over remix that will ensure radio and club air-play right across Europe. They're Dex and Jonesey and they've achieved all of this with a couple of Amigas and copy of ProTracker. This is their story so far ...

Anyone into the dance music scene can't fail to have heard Josh Wink's 'Higher State of Consciousness'. Originally released on the New York label Strictly Rhythm, it became a club classic with a three pronged attack consisting of a funky breakbeat, a massive drop out with a snare drum build up and an ear-syringing acid line.

Limited supplies of the original import release lead to it being re-released for mass UK consumption on Manifesto Records, with a housed up, smoothed out remix. It was massive all over again, was voted Best Dance Record of the year in all the polls, but even then the demand for it continued, so Manifesto decided to satisfy the market with another re-release. Manifesto boss and major league DJ Judge Jules had taken care of the previous remix, but now there was the question of who to put on the case for the new remixes. This is where Dex and Jonesey enter the picture.

> **"We had a lot of knock-backs at times but we kept going."**

## Bangin'

Dex (Andrew McEniry, former Silica employee) and Jonesey (Kevin Tewis) had already cut their teeth on the dance scene as resident DJs at Dartford's Zen nightclub and as early as 1993 made their first record, Layla, which sampled the classic guitar riff from the Eric Clapton original and dropped it over a funky house back-beat. That one never made it to an official release, (although it sneaked a bit of club play via Dex and Jonesey's personal copies) as Mr Clapton objected to the use of his riff. Fast forward a couple of years to November 95 and the boys got their first track, the aptly titled The Beginning, released on Bang International Records, a label run by none other than Judge Jules. This paved the way for remix of Disco's Revenge by Gusto which Jules released o his other label Manifesto. By now the collective foot of Dex and Jonesey was well and truly wedged in the industry door.

When they heard Higher State of Consciousness was due for a re-release

### The studio in full

## Dex & Jonesey – Discography

***Original productions***

**Layla (never released)**
**The Beginning**
**Chariots of Fire**
**The Anthem**

***Remixes***

**Gusto – Disco's Revenge**
**Wink – Higher State of Consciousness**
**David Morales – In Da Ghetto**
**That Kid Chris – Feel Tha Vibe**
**Tall & Handsome – Outrage**
**United Nations of House – Rocky**
**Wildchild – Jump to the Beat**

**Additional remix work forthcoming on Positiva, Perfecto, Hooj Choons, Polydor and Manifesto labels.**

they knocked up their own remix on spec and packed it off to Jules. He liked it so much he commissioned two additional mixes from them, so the promotional pre-release copies actually contained three headlining Dex and Jonesey mixes, universally awarded the ultimate club accolade of 'Bangin' by all the top names on the scene. In fact, tastemaker and general dance music figurehead Pete Tong has hailed their main remix as the best of the year, if not the 90s and quite possibly one of the best remixes ever! Now there's something to put on your CV.

## True grit

At the time of writing they hold both the number one and number seven slots on the DJ Magazine DJ Dance Chart with remixes of Higher State and Dave Morales' In Da Ghetto. With a string of other remixes all signed, mastered and ready for release over the next couple of months and even bigger projects lined up for big labels such as Perfecto, Positiva, Hooj Choons and Polydor, things are looking rosy for the pair. So how are they handling their apparent overnight success?

**Jonesey:** "At the moment we've got this remix thing to do. It'll probably earn us a lot of money. We've got to do it – I'm not turning that down. Everyone else goes through it: the Todd Terry syndrome, there's lots of other remixers who do it so I don't see why we should miss the boat."

**Dex:** "We knew we eventually we'd make it. We had a lot of knock-backs at times but we kept going."

**Jonesey:** "You keep plugging away."

**Dex:** "If we'd have given up a couple of years ago after a couple of knock-backs we'd have probably ended up doing something else. He'd have done his photography, I'd still be selling computers.

***But does the rest of the record industry take you seriously if they know you're using less than a £1,000 worth of equipment when their studios cost much more?***

**Dex:** "Don't let anyone know you're using home equipment [at first]. Let them think you're using a big studio."

**Jonesey:** "But we don't care now."

**Dex:** "No, we'd like everyone to know that we use Amigas."

**Dex:** "Obviously here we don't have to pay any studio costs. A lot of remixers say 'Here's our fee and here's our studio costs' and a lot of people said: 'You won't be able to charge that much for remixing then' and we're like, fine, if they don't want to pay we're not doing the mix. It shouldn't make any difference at all."

**Jonesey:** "We've had three deals since then and they've all been good earners."

**Dex:** "John, our manager, he's put our rate up. If they try to barter below that he's really good."

**Jonesey:** "He's been in the business ten years, he's knows what their budgets are and he says to us 'I know what they pay everyone else, why can't you have that money too?'"

**Dex:** "He knows we'll get a lot of work through Wink. He knows if he turns one down it won't mean there'll be no more work, there's going to be a lot coming in."

> **"Pete Tong has hailed their main remix as the best of the year."**

***So exactly how are these tracks put together with such a basic system?***

**Dex:** "We always put the beat and the cymbals on the A500, which is handy as we haven't got enough memory on there for anything but little samples."

***So you run each Amiga through its own mixer and use the treble and bass controls to clean up the drums?***

**Jonesey:** "Yeah, always. It gives it that raucous sound."

***You monitor your mixes through those little Zydec speakers?***

**Jonesey:** "Yes, but what I do is take it back to my home system or Dex's one and try it there too."

**Dex:** "We try it in different places, on his system, in the car ... if you do it everywhere and they all sound good then you're all right. When we do parties, I've got my big speakers and we use these for DJ monitors and we've blown the tweeters – you can see they're a bit brown on the top!

"We've been in so many big studios but the quality of the stuff we can do here is so much better because you need an engineer to go around with you there – we know the exact sound we want and we know how to do it here."

**Jonesey:** "We went to Mike Stock's [formerly of the Stock, Aitken and Waterman production trio] and it's the best studio you've ever seen. We went in there and we were like 'What do we do?'. Where as it's like 'hands on' here and you get a beat and it's brilliant, you have to go through, say, 17 channels and 15 gates just to get the sound. I'm dreading upgrading to Cubase and getting an Akai.

"We do use a little production studio and that's really easy to use. We had to do the Chariots of Fire project in that."

**Dex:** "Jules was being fussy, he wanted a piano intro ..."

**Jonesey:** "But he was happy with the mix and he's signed it now so it was worth it."

## Novelty horn

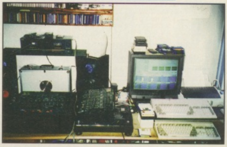
Every studio, no matter how small, needs a 'secret weapon' – some kind of device that makes a unique sound which should really remain a secret from the rest of the recording industry. Dex and Jonesey used theirs on the remix of In Da Ghetto. When they took it to Manifesto, Jules is reported to have exclaimed "What's that noise? It's the best horn I've ever heard – it's brilliant!". In fact it's a novelty bicycle horn (like you might have had on your Chopper) which doubles as Dex's dinner bell. It's attached to a button in the kitchen which his mum rings when his egg and chips are ready. With its three types of siren this little toy apparently sends the dancefloor haywire. This is a prime example of making the best of what you've got, letting imagination overcome the limitations of a technically basic studio. Pick up any of their remixes and see if you can spot which mixes were made with ProTracker and which came from the studios of the big name producers on the circuit. It won't be hard. It's nothing to do with sound quality – you'll know because the Dex & Jonesey mix is the one you'll crank up to number 10!

These boys are motoring on to a bright future against all the odds, fuelled by talent, self-belief, grit, determination to succeed ... and the Amiga. They're doing it their own way, and if you really want to, you could too. They're living proof of that. ■

**Tony Horgan**

## Thanks to ...

**Dex and Jonesey would like to thank Judge Jules at Manifesto Records and John Cecchini at Red Parrot Management for all their help. All enquiries about Dex and Jonesey should be directed to John Cecchini on 0171 736 9676.**



▼ Two Amigas, one TV and a load of enthusiasm: the studio.

# Screen Scene

The arrival of The Killing Grounds this month and an opportunity to exclusively check out the next version of Amiga Worms has meant that we've seen very little of Alan. The other gaming delight is of course Brian Lara Cricket and, yet again, Championship Manager 2 and The Chaos Engine 2 have been delayed (despite the latter being reviewed in half-finished form in another magazine). Here's to next month!

# Worms:

## The Next Generation

**■ Due: Before Winter ■ Developer: Andy Davidson ■ Publisher: Team 17 © 01924 267776**

**The Amiga version of Worms was always the best – now it's getting even better. We entered the twilight zone for a sneak preview.**

Bournemouth is many things. It's a beautiful town (on a sunny day anyway), a haven for retirees and a Mecca for south coast sun seekers and wind surfers but it has a darker side too. On the outskirts of town lurks a black eyed idol, a symbol of terror for young children, a nightmare in stone. The concrete donkey.

For those not aware of the history of Worms, I must tell you that the concrete donkey has an almost mystical significance. Andy Davidson, the game's creator, has invested considerable time telling anyone who will listen that it was the bad childhood dreams this creature made him have that inspired the game. He claims he's emotionally scarred, he claims that its black eyes are evil – yet on a sunny day at the south coast the donkey in question looks no more evil than a Noddy garden gnome. It stands two feet tall and carries flowers on its back. "You wouldn't think it so innocent if you were two feet tall. I was only a child." claims Andy in a sulk.

Anyway to keep him happy we've published the exclusive picture of the concrete donkey you see on these very pages. So now you know. And hey, what price fame and fortune, eh?

### Super colours

The new version of Worms will only work on AGA Amigas – that's A1200 and A4000. This has allowed Andy Davidson to fulfill his wildest dreams: there are more colours and with 2Mb as standard more special features and weapons can be bolted on.

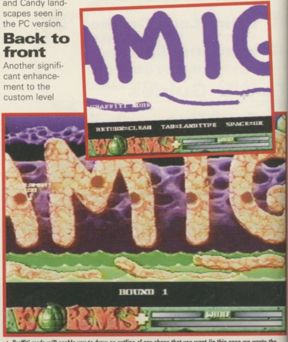
Both he and Team 17 wanted to make it quite clear, though, that this is NOT Worms 2. Worms 2 is a project which is being developed long term for, as Andy slyly puts it, "all formats still viable at the end of next year". That game is scheduled for a Christmas 1997 release and will be a complete overhaul. This Amiga version is more like Worms 1.5. "I am testing some of the weapons out in this version that will no doubt appear in Worms 2, but what I'm trying to do here is make the best Amiga game ever. It will also be the best version of the original Worms available on any platform." So a name has not been settled upon for this game, although it is proceeding under the working title of 'Worms AGA'. "Just don't call it Worms Plus – I hate that name", according to Andy. Personally I like Worms: The Next Generation, which is why the headline is thus.

One of the most useful features of the AGA only approach is that custom levels can now be designed in 16 rather than eight colours. This makes them all the more realistic. Also, Worms on different teams will have different colour jerseys, making them more distinctive. There will also be what is known as Graffiti Mode. Andy realised that while many people are perfectly capable of creating their own landscapes in DPaint, not everyone wants to go to this length. Thus there is a custom level designer built in to Worms AGA as standard. Graffiti mode allows you to draw an outline of any shape you desire and then, at the click of a button, render it in one of the level styles. As well as the original forest, hell, snow and jungle levels the increased graphics and RAM capabilities of AGA Amigas will allow the inclusion of the Beach and Candy landscapes seen in the PC version.

### Back to front

Another significant enhancement to the custom level design capabilities of Worms AGA is the ability to include foreground and background features. As Andy put it "you could design a supermodel level where the model's clothes are in the foreground and you could then shoot them away for extra excitement ... revealing all on the background. This would also be very good for secret platforms. You could make a solid background platform the same colour or texture as the foreground and then it slowly gets revealed as the battle goes on".

Yet another important addition are the cavern levels. Basically this feature (which can be toggled on or off) gives any generated landscape a 'roof' –



▲ Graffiti mode will enable you to draw an outline of any shape that you want (in this case we wrote the word Amiga) which you can then render in one of the level styles of your choice.

## New features

- A Baseball Bat
- A Pistol
- Super Sheep
- Old Ladies
- Mad Cattle
- 16 Colour Backgrounds
- A Holy Hand Grenade
- Homing Pigeon Bombs
- Worms can jump vertically
- DIY Graffiti mode
- Priceless Ming Vases
- Blimey, I love this game!

which plays havoc with Homing Missiles in particular, and makes Air Strikes impossible, but lends a whole new meaning to the Bungy and the Ninja Rope. The latter has also been modified to allow multiple swings: on cavern levels you can swing from rope to rope like Tarzan. The Ninja Rope and Bungee also both allow you to drop dynamite now. Swinging in from above SAS style and delivering the goods, then swinging away again. Likewise he has sensibly modified the game settings to allow you to swing off and back on screen without dying.

## New weapons

While the graphical changes are all very well most people want to know what sort of new weapons this version has. The answer is plenty. The ones Andy is most proud of at the moment are the Mad Cows and the Old Ladies.

Having iconised sheep in the opening episode, Mr Davidson is now waging his own war on the Brussels beef banners with exploding cattle. They work in a similar manner to sheep, but can be collected and released as herds to stampede towards the enemy. Mad Cows are bad news in fact. Remember the Dark Side: hiding in hills, saving energy while all around you other worms were dying? Well cattle are just the job for defeating the Vaders of this world. Send a herd of three or four towards a hill and five seconds later the hill is in smithereens and the bad guys are exposed.

A far more unreliable instrument of death is the Old Lady. "Living in Bournemouth you see rather a lot of them" according to Andy, "so I thought I'd use them in the game". Another variation on the Sheep theme, grannies will rather slowly make their way towards the designated target, mumbling about the price of milk, and then exploding on contact. The only problem is that the old dears can forget where they're going. "You see they haven't got very good memories, so they might just turn back and head towards your worm!"

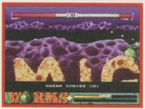
On the subject of Sheep, they have been elevated to a main weapon ("in recognition of sterling service in the first game"). So in Worms AGA you will get one sheep as standard on your weapon bars. However, there are now also Super Sheep, Sheep Strikes (instead of Air Strikes) and the innovative Sheep On a Rope, designed to fool students and new age worms.

Other special crate drop weapons include the Holy Hand Grenade, complete with hallelujah choir sample and homing pigeon bombs. Has the man gone off his rocker? We think so. As standard a baseball bat and a pistol have been added to the weapons bar too. The baseball bat is an unsubtle way of killing another worm if they are low on energy but there's also "going to be a 'HOME RUN' exclamation and crowd cheering if you bat a worm off the edge of the screen" according to Andy. Furthermore "the pistol is a bit useless, but handy nonetheless for assassinating Worms named after presidents". Sick.

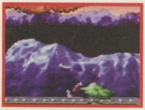
▲ Andy Davidson: "Look, someone once kneecapped the concrete donkey, but my parents fixed it". A gaming genius introduces us to his inspiration. Scary eh?

## Quick release?

All of which sounds magnificent indeed. But when is it likely to be finished? Well, Andy had someone else helping him out at the beginning, but they departed some months ago, so he has now signed up Alex Amsel of XTreme racing fame for some work. But the biggest delay in getting the game finished is largely that of new ideas. Every few days Andy or one of his playtesting mates will come up with a stonking feature that just has to be added. And it is. Team 17 look up to the ceiling in despair if you ask the release date, so it really is down to Andy himself. "I would say I'll have it done in 2-4 weeks" he told me. I said "So that means two months then". "Oh no, not at all", he replied. Straight from the concrete donkey's mouth as it were.



▲ The little white dots in the top right are in fact sheep being dropped en masse for a Sheep Strike.

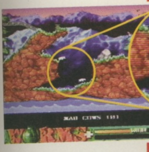


▲ This version of Worms allows you to drop dynamite from the Ninja Rope, then swing away.

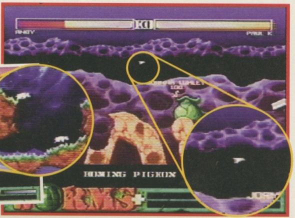
But an official name for the new game has to be invented yet, it has to go through QC and playtesting and Andy Davidson is also pressing Martyn Brown for a CD version of the game: "to do it justice with sound effects".

Even if it is finished in two-four weeks, it'll be at least another month before us poor punters can get our hands on it. But by my reckoning it'll be worth it. If Mr Worms can include some of the more lunatic ideas he floated past me (including a 'Trout Mode' – I'll leave it to your imagination) this could well be the title of the year all over again. ■

**Alan Dykes**



▲ Send in the mad cows (circled above) and before you know it, everything around them is in tatters.



▲ Special crate drop weapons include the Holy Hand Grenade with hallelujah choir sample and Homing Pigeon bombs (highlighted in yellow circle above). Looks like Joanna Lumley could be in a for a shock.

# Rockstar

**■ DFR: September ■ Publisher: Mirage Software**

Poland's answer to the Amiga's survival is a company called Mirage Software (no relation to the UK giant). Based in Warsaw they have been developing, producing and distributing commercial games in Poland on the PC CD-ROM format for seven years now. However, recently they have branched out from this format to suddenly appear straight out of the blue and do some Amiga games. Good news indeed. The two games we are previewing here are part of the considerable collection they currently have on sale. These two although currently in Polish, should hopefully be translated into English reviewable versions soon.

First up we have Rockstar: a 'rock star simulator' where the player must chart his melodic rise to fame and fortune starting at school and travelling onto the potential world of a future rock-star. It's a strategy sim where you'll get take part in all the glitter and glamour of the music business such as cutting records, making record deals, singles, albums and going on world tours.

Mirage say that all the features of Rockstar are a result of the designers painstakingly learning the mechanics of song writing. However, so far, it looks to me that the makers just thrashed a couple of guitars for an all out jammin session. But it's a novel idea and it also plays well so it should be a bit of fun when the full version comes in. Rockstar will be available on all Amigas, so in the meantime I'll just start polishing my platforms for when it comes in. ■

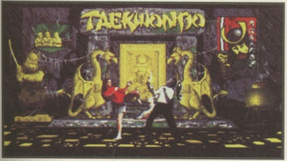
# Super Taekwondo Master

■ **DFR: September** ■ **Publisher: Mirage Software**



This is Mirage's attempt at a 'Mortal Kombat' style game on the Amiga. And they don't seem to have done a bad job at because it is it is quite similar to Acclaim's Mortal Kombat.

Piotr Trocewicz, the lead programmer of the Beer BoyZ Software team, is the coder and is also behind the overall design and the digitised style animated characters that are in the game. He makes no bones about their inspirations: "We're all definitely hardcore fans of the Mortal Kombat games. Initially we wanted to do a game that had plenty of blood 'n guts, because there wasn't much excitement from most of the current crop of recent beat 'em ups. And you hardly ever saw a drop of blood on the screen at all".

So far it's looking good. There are plenty of digitized style characters with indigenous backdrops and a few special moves thrown in as well. The control is also very Mortal Kombat-esque with the old 'left, left, right and fire, down and left, down and right etc coming in handy for those famous spins and flips. The usual options are there as well: one or two player matches, a tournament match where you can select one to six characters and infinite CPU players to pit your brawn against.

All that's waiting to be seen is how well STM will convert to the Amiga. An important factor of any beat-em-up has got to be the speed at which the game plays. It's no good saying that the game will contain 256 colours, digitized graphics and speech when the game plays so slowly that the characters can only perform their special moves by one frame every minute.

STM will be available for all Amigas and we should have a review soon. ■

## Workbench Add-On Volume 1

The Workbench Add-On CD-ROM is the ideal companion to your workbench. On this CD you will not only find the best programs, that are available for the Amiga, but you will also get them ready-to-run from the CD. In addition to this there is an installer script that installs the desired programs to your harddisk.
The CD covers all areas of interest, all, the programmer, the user, the creative and the gamer will find what they are looking for. On this CD-ROM there are many shareware programs, some of them at a special price, if you get registered. There is e.g. Shapeshifter for 40.- DM (instead of 50.- DM), in addition to this there is a 50 MB Mac partition, so that you can start playing around with Mac applications right away. Then there is PowerPlayer for 20.- DM (instead of 30.- DM), there are, of course, loads of modules with it, so that you can try it right away. AmiWin, the new X11-server for the Amiga is available for $40, instead of $50. You can sa ve more than 100.- DM with this CD. Therefore you only have to send in the appropriate page in the booklet to the author of the program. £24.95

Magic Publisher

## Magic Publisher

On this unique CD-ROM Set you will find all you need to create nice looking documents. If you want to write a book, if you want to design a poster, if you want to create WWW-Pages for the Internet or layout a magazine, all you need you will find on this marvelous CD-ROM. There are more than 10.000 Fonts (Colour Fonts, Bitmap Fonts, IFF-Fonts, Adobe Fonts, IntelliFonts, Truetype Fonts and DMF Fonts), more than 5.000 cliparts and 150 printer drivers. Many of these are exclusive to Magic Publisher. You will also find a complete installation of PasTex (more than 300 MB), containing all its fonts (upto 600x600 dpi). In order to create good looking documents, there is Final Writer 4 SE and Wordworth 4 TD. Both rated as the best word processors on the Amiga. For creating good looking Internet-WWW-Documents there are all available Free/ Shareware programs for the Amiga, including many backgrounds and special clipart for this purpose. The 100+ pages booklet contains printouts of all fonts and clipart. Aspecial BBS section is also provided. £49.95

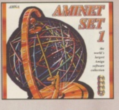
AMIGA
DEVELOPER
CD V1.1

## Amiga Developer CD v1.1

The official developer CD from Amiga Technologies contains all the material you need to start developing software forAmiga computers. This includes: The CD32 developer package. In addition to the original five disk set distribution you will find the "Build-CD" CD writer package Packages contributed by 3rd parties: The WBPath and ActionFSSM packages, courtesy of Ralph Babel; The Envoy v2.0 developer kit, courtesy of IAM, Inc.; The INet 225 developer kit, version 2, courtesy of Interworks, Inc.; The Kiskometer package, courtesy of Angela Schmidt; The Enforcer v37.64, courtesy of Mike Sinz. Information in support of forthcoming operating system developments. Additional developer material: BOOPSI gadget and image classes; The AmigaOS 2.04 example code, as part of the original 2.04 Native Developer Kit; The RKM 2.04 code examples; The complete set of registered IFF forms; IFF example and stress test files; All IFF packages released by Commodore-Amiga, Inc., covering 1986 through 1992; The comd v37.1 MIDI developer kit; The SANA-II standard package and developer kit; The Installer v43.1 package. International support material: Sample text using the full ISO-8859-1 character set; Translation guidelines. The updated 3.1 Native Developer Kit: "C" and assembly language header files, linker and runtime libraries; System documentation and tutorial texts; Example code covering the Amiga OS 3.0 and 3.1 features; The NewIFF v39 package; The AmigaGuide and DataTypes documentation and example code. Reference material: The collection of AmigaGuide Volume 1 articles, covering Spring 1987 through January/February 1989; The complete AmigaGuide Volume 2 articles in AmigaGuide format, covering January/February 1990 through March/April 1993; also included are the printable issues in PostScript and PageStream format; Hardware related articles; The Includes & Autodocs in AmigaGuide format. £14.95

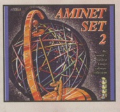
CHIARI OFFICE · 1995



## Aminet Set 1

Aminet is the world´s largest collection of freely distributable Amiga software. Up to 10.000 users access the vast archives ervery day and countless programmers publish directly via Aminet. Until recently access to Aminet was restricted to international network users. With Aminet Set 1, consisting of 4 CDs, the complete archive is published the first time. This CD-ROM-collection, which is dated January 1995, offers an almost inexhaustible reservoir of top-value Shareware. A wide variety of programs is included: Applications, Games, Demos, Pictures, Mods, Animations, Developer-Material, ... . It contains approximately 4 gigabytes of software in 12.500 archives and you will enjoy the comfortable user-interface. £29.95

• • • • • • • • • • • • • • • • • • •



## Aminet Set 2

AMINET SET 2, dated November 1995, consists of approximately 4 gigabytes of software in 12.000 archives. Whether you like applications, games, communications or programming, the SET gives you all you need. Easy to use index files and search facilities make accessing it a pleasure. £34.95

• • • • • • • • • • • • • • • • • • •

AMINET
SET
3
including full versions of Imagine 4.0, XiPaint 3.2, OctaMED 5 and some commercial games

## Aminet Set 3

AMINET SET 3, dated July 1996, consists of approximately 4 gigabytes of software in 9.000 archives. Also included are full versions of Imagine 4.0, XiPaint 3.2, OctaMED 5.0 and some commercial games. Whether you like applications, games, communications or programming, the SET gives you all you need. 95 MB Utilities, 79 MB Documents, 408 MB text software, 12 MB Disk/HD tools, 7 MB Hardware related, 756 MB Pictures & Animations, 208 MB Graphics software, 394 MB Graphics & sound demos, 563 MB Games, 64 MB Miscellaneous, 685 MB Music modules, 28 MB Music software, 131 MB Communications, 91 MB Development Software, 88 MB Business software. Easy to use index files and search facilities make accessing it a pleasure. £39.95

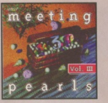
AMIGA CD32
GAMERS 2 DELIGHT

## Gamers' Delight II

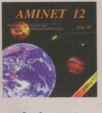
This CD contains 1070 games for the Commodore Amiga from differing categories. Action, Jump & Run, Card Games, Puzzles, Strategy Games - a whole range of computer entertainment awaits! Gamers' Delight will hold you captivated for hours and guarantees long-lasting pleasure. 70 games are commercial versions - no public domain & no demos! This CD can be run on any Amiga with CD-ROM drive,1 MB free memory and Joystick/Joypad. £26.95



## Meeting Pearls Vol. III

The Meeting Pearls Volume III contains 650 MB of the finest FD software via a special user interface, which has been created to allow you to find the program of your choice with ease. The contents: 10 MB Packer, Cruncher, Archive Programs · 3 MB CD-ROM Utilities · 21 MB Communication and Network Programs · 5 MB Debugging Tools · 29 MB Development Tools · 13 MB Floppy, Hard Disk ans SCSI Programs · 8 MB Educational Programs · 9 MB Games · 35 MB Graphics Programs · 39 MB Internet Movie Database, Updated Version · 7 MB Midi Tools and Programs · 27 MB Mods · 12 MB Music Programs · 21 MB Pictures · 13 MB AmiTCP and more for Networking · 60 MB Documentation, CD-ROM Databases, etc. · 96 MB PasTeX 1.4 - not previous available on any CD-ROM · 15 MB Utilities · 30 MB HTML-Pages · Collections of datatypes, benchmark programs, icons, programs for amateur radio and electrical/electronic engineering are also included. £9.95

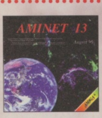
• • • • • • • • • • • • • • • • • • •



## Aminet 12

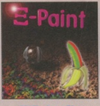
Still available! £14.95

• • • • • • • • • • • • • • • • • • •



## Aminet 13

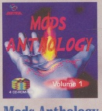
Aminet CD 13, dated August 1996, consists of approximately 1,1 gigabytes of software in 2400 archives. Since the release of Aminet CD 12 more than 800 MB new software has appeared. The current edition has a special focus on animations, several hundred animations from the internet were included. User friendly access software makes the Aminet CD 13 a pleasure to use. £14.95



## XiPaint V4

XiPaint 4 is the new version of the leading edge, 24-bit paint program. It's suited to the demands of novice and expert alike, and within a short time, you too will be able to produce colourful and creative art in 16.8 million colours. This version of XiPaint features animations as well as easy-to-use raytracing-capabilities.
Overview of Features: · Diverse paint functions including colour, contrast and saturation adjustment · Mask, outline, recolour and fill functions · Airbrush with adjustable spray functions · Light-table function for manipulating montages and animations · Text functions with anti-aliasing using Compugraphic fonts · Support for a variety of graphic formats · Unlimited Undo · Diverse manipulation of alpha channel · Supports many graphic cards · Layers to combine different projects · ARexx port · Drag & Drop colours · External filter module · Extensive documentation · 60 textures, 50 landscapes, 30 other pictures and many fonts included. £49.95

• • • • • • • • • • • • • • • • • • •



## Mods Anthology

Do you like Music? Do you like Computers? Do you like Computer-Music? Then, this collection is what you need! 4 CD-Roms full of Music-Modules! More than 18000 mods of any format (MOD, S3M, XM, IT, Amiga Synthetics...) all sorted by Composers in priority, by Groups, then by Kinds; all stored in uncompressed form, readable under all the major platforms. Coming along with 11MB of Module Lists (ASCII, AmigaGuide...) and 25MB of Module Players and Trackers for many computers.Released with the full agreement from more than 200 musicians (PC and Amiga Scene) who provided me with a personal infofile and picture, as well as many previously unreleased modules!Enjoy this 7-years titanic work! Prepare to listen to 1000+ hours of Music! £29.95

# The Killing Grounds

**AMIGA SUPERSTAR**

**■ Price: £29.99 ■ Publisher: Team 17 ✆ 01924 267776**

**Entering the docking bay I found myself on the receiving end of 10 alien guns ... bye, bye cruel world.**

If you want to know just how far the Amiga can wander down the Doom road then this game will provide you with the answer. And as for Team 17, they're full of contradictions.

After Christmas last year Martyn Brown was reluctantly telling the world that there would be no more Amiga products from Team 17. Although bullish about this at the time you could detect more than a hint of sadness from one who saw the machine rise and fall and whose personal fortunes have depended so much on it. But times change and a company like Team 17 has to change too or Martyn and the Ossett team would fast find themselves becoming familiar faces down the labour exchange. Their development has become PC and Playstation centred and new multimedia (PC) and On-Line services have also been started.

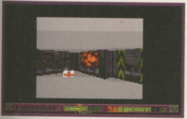
But you can't keep a good man down, as the saying goes – or in this case a good game. Soon after the pessimism of late 1995 it was revealed that Team 17 was indeed developing a follow-up to Alien Breed 3D: The Killing Grounds.

As regular perusers of our next month pages will have realised TKG has been heavily delayed – it's nearly four months late in fact. But all those months of extra development have smoothed out the rough edges and Andy Clitheroe, its developer, is now confident that it's in a league of its own.

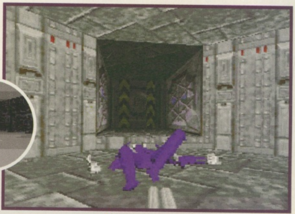
On accelerated Amigas with 4 or more Mb of RAM it really looks the part. This was the version I first saw and it's still impressive. The 1x1 pixel graphics are beautiful on walls, ceilings and floors and the lighting effects are original for an Amiga game. In places they're simply breathtaking.

## Slothful

But it does suffer from two problems in this mode. Firstly, so much has been put into the lighting effects in a couple of places the game is just a little too dark for its own good. One of our criticisms of Breathless was that it was too grey – TKG is too dark because this is the only way to show off the lighting effects. The second problem is with speed. 1x1 pixel graphics may look beautiful but they're a real dog to shift about on screen. Our standard spec games testing Amiga is well equipped with a Blizzard 1230IV with 8Mb RAM. This has a 50MHz processor but it struggles with TKG. In 1/2 screen size it's very playable but responses can still be jerky when tackling large or multiple enemies. In full screen it's a joke.



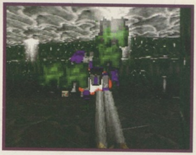
▲ The bare looking but fast 2Mb version with 2x2 pixel graphics. This is the most playable but it lacks the atmosphere of its big brother.



▲ Lying down on the job. This alien is known at Team 17 as the 'Steve McGill'. Sorry I shot you Steve – it wasn't personal.

With a 50MHz 68060 accelerator it's possible to play TKG at full screen size, but again once you get bogged down in combat you're better off at 1/2 size – it's just much more playable.

This is a serious issue for Team 17 and one they've obviously thought about for a while. In order to produce the be all and end all of Amiga Doom clones they've had to compromise speed. Just like iD's new PC game Quake (iD made Doom) needs a ridiculously fast processor, TKG needs more than most Amiga owners have in the way of power. Some say this is unnecessary – I say it's progress. And TKG is not alone.



▲ A large alien meets a sticky end. The blood colour has changed from red to green for political reasons.

Even Andy Davidson's new Worms project will only work on AGA Amigas and if you have more RAM it'll be better.

To help out here Mr Clitheroe has done a sort of TKG Lite for those not so well equipped. This will work on 2Mb Amigas and exclusively uses the older 2x2 pixel format with floor ceilings greyed out. There is also no option for full screen mode in this version. That said

Continued overleaf ▶▶▶

it really flies, especially if you have an Amiga with some fast RAM in it. In fact it's faster than the original Breed 3D in these circumstances, but it has much less features though.

## Wide screen

Another way of getting the playing speed right is to go for a 'wide screen' option. On the 4Mb version of the game you can narrow the screen for that lovely Star Wars effect. Yes it increases the speed but unfortunately can also lead to some problems seeing what's on the ground in front of you and what's flying overhead. Other nifty ways of squeezing more from less on the big version is to switch lighting effects off and reduce the rendering and sound quality, all of which are accessible via the F keys. Finally you have the option of altering the pixelisation to 2x2 1x2 or 2x1.

The fact still remains though that even with fast RAM you would only load the 4Mb version at your peril. The game is so unplayable without at least a fast 030 accelerator it is ridiculous. Directional commands take a second to implement and you really are only operating at around two frames a second.

Speed is one thing that effects playability but the level layout is equally important. Luckily here Andy Clitheroe has demonstrated that he still has a grip on reality ... though he does appear to be operating on a plane above the the rest of us on some levels.

The enemies are as good as they were in Alien Breed 3D and Mr Clitheroe really has injected a sense of menace into them that has not been matched by any of the Amiga's other Doom clones. But wow, some of these levels are very difficult. Frustratingly so at times. In fact right from the second level the odds are stacked against you until you find a way around. This often includes going back and completing previous levels to get more ammo and life before re-attempting later ones. There are six save slots to enable you to do this though, so all is not lost. That said Breed virgins are likely to find this game impossibly difficult.

Some enemies just do not want to die, or are incredibly hard to target, and although the game now features a look up and down function, targeting troublemakers on higher or lower platforms is still a hit and miss effort.

The artificial intelligence we were told about is a bit weird too and takes getting used to. You can run and hide and enemies will sometimes disappear right past you, allowing more forward progress. However, because of the level design, which sends you off into the distance looking for keys and objects, you are very likely to encounter them again at a later stage on the level as you double back. Though by then you might be equipped with a bigger gun! The way it has been programmed makes playing a lot less predictable than any other game of its kind. The bad guys don't just sit there waiting for you, they gang up and sometimes even seem to run away when fired upon, coming back in greater numbers.

The weapons are an interesting bunch, with plasma guns, grenade and rocket launchers and a completely useless blaster available along the way. Mines are useful too. One of my biggest criticisms of the weapons is that you should automatically be switched to another if your current one runs out mid battle. But sadly not here so frustration reigns.

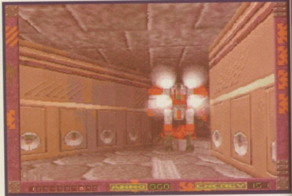
## Epic ending

In the final analysis The Killing Grounds is a revelation, if a tainted one. It's kind of like one of those big Cecil B DeMille movies: vast, lavish and expensive (on your eyes, brain, fingers and in terms of the sort of Amiga you need to run it properly). The massive cast of aliens are difficult to defeat, full of surprises, the atmosphere is, in a word; scary and the graphics and lighting are just excellent.

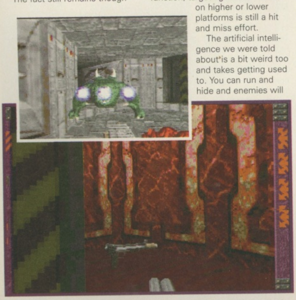
What a pity then that all this is compromised by game speed. The simple fact of the matter is that the Amiga is really not able for the 4Mb version of this game without serious acceleration. The 2Mb version is similarly compromised by its crudeness – though there's no doubt about its speed and playability. In the final analysis The Killing Grounds' biggest enemy is actually, believe it or not, the old Alien Breed 3D. To create TKG the original has grown in two directions, both of which have unavoidable faults – so it could never be as complete a game as its predecessor.

The two scoreboxes tell their own story – one of top graphics versus speed. But I've got a fast Amiga so I know which one I ultimately like the best. By the way, they both come in the same box, so if you do upgrade your A1200 you can taste the fancier fruits at no added cost. ■

**Alan Dykes**



▲ When your screen goes red you're being hit. The only way to deal with some aliens is to use a mine: drop it and then run away. Taking them on directly is like playing Russian roulette with an automatic pistol. Duh!



▲ Above: The absolutely, utterly useless blaster gun. Rubbish. Top: The multiple shot plasma gun is, surprise surprise, much better. For the ultimate in rush in weaponry though you've got to try the rocket launcher.

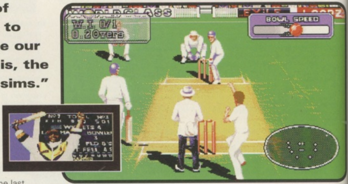
# Brian Lara Cricket '96

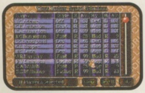
**■ Price: £29.99 ■ Publisher: Audiogenic ✆ 081 424 2244**

**"Welcome to the Wild World of Sport, where today we go live to the Audiogenic Stadium, where our man is waiting to report on this, the latest in a long line of cricket sims."**



▲ Inset: the only black sprite in the game is on the introduction screen – Mr Lara himself.

Once a company hits the nail on the head as far as how any particular sport should be represented on the computer screen, every other company seems to either do its very best to completely rip it off, or go so far out of their way NOT to rip it off that they miss the point completely and end up with a totally different but totally unusable control system. Fortunately, Audiogenic already have the franchise on playable Amiga cricket games, and though my first instinct upon playing Brian Lara Cricket '96 was to attack it for appearing almost exactly the same as the last Audiogenic cricket game I reviewed (albeit about a million years ago under the original name of Graham Gooch Cricket) it still remains about the only one I'd bother recommending to you. No, I haven't forgotten Grandslam's ITS Cricket, it's just that Audiogenic's control system is a lot more instinctive and more likely to be instantly picked up by a non-cricket fan such as myself.

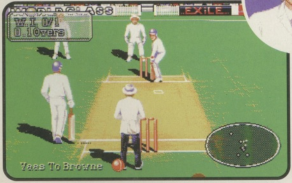


▲ You can pick the best eleven automatically as well as making your own selection.

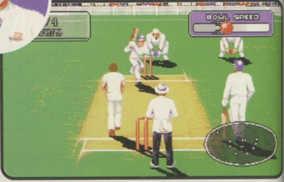
## No interest

Yes it's true, I've absolutely no interest in men dressed in white. Dressed as sailors or red Indians and you're getting close, but as far as rubbing balls against your crotch until they're red goes… well, it all seems a waste of time to me (not to mention a bit suspicious). Of course that's not to say that there isn't a good computer game lurking away somewhere, and considering I thought I had no interest in football until I played Sensi, I was more than prepared to approach Brian Lara with an open mind. Sorry to report, the first impression is one of laziness on Audiogenic's part …

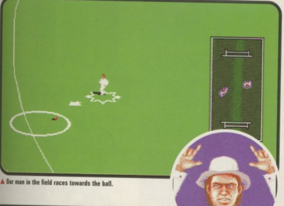
If you've not played Audiogenic's Graham Gooch Cricket game you won't know what I'm talking about, but if you have, you won't be able to avoid the fact that the graphics are pretty much identical, the music IS identical and the gameplay remains unchanged (I don't like to use the word 'identical' three times in a row — it brings bad luck. Or something). Of course,



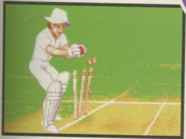
▲ The tension mounts. Will England finally get a chance to win at cricket even it is only a simulation?



▲ The little bar at the top gives you an idea as to what pace the ball is travelling at.



▲ Our man in the field races towards the ball.

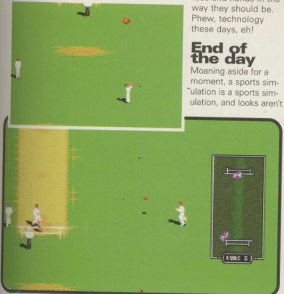


## A question of control

The controls are pretty damn simple; and even if they're NOT simple enough for you, you can select a skill level to suit your abilities (or lack thereof!) The fielders can either be directly under your control or completely CPU-controlled; leaving you to just worry about bowling. The bowling itself is pretty easy: just make sure that by the end of your allotted time limit you've moved the bowling cursor to the position you want and then wiggle the cursor in the prescribed manner to gain as much speed or spin as you can. Strategies come from your selection of bowlers – so you might want to opt for a fast bowler but then deliberately send a slow delivery to confuse things. You can also use spin bowlers to trick opposition, and even pretend to be clumsy when fielding to tempt batsmen into going for extra runs they'll never complete. If you chose to play with manual fielding it's really just a case of running the active fielder towards the ball and throwing it back to the wicket as soon as possible. Batting is easily more fun than fielding or bowling, with a combination of timing and a good working knowledge of the various possible shots being necessary to strike a good shot every time. You still get to see the target hinting at where the bowler is aiming, and then you need to select from the eight joystick directions to select the shot (ie down/left for an off-drive, left for a cover drive, etc.) finally timing your swing correctly depending upon the speed of the delivery. You can then speed your runners up by waggling the joystick as fast as possible. Easy, non?

you could live by the 'If it ain't broke, don't fix it' rule, but even the great man, Mr Lara (and let's be frank here, he's black and pretty obviously so) appears as the same white player used throughout.

Now I'm not looking for accurate digitised representations of every player on earth, but even those tiny fellas in the aforementioned Sensi Soccer have more character than these mannequins! According to the documentation, players of different colours couldn't be incorporated into the Amiga version due to "Technical restrictions". Yeah, sure! How about: 10 MAKE BRIAN BLACK. 20 GOTO 10. RUN. Technical restrictions my rear end! I suppose you need the awesome processing power of a Pentium before you can colour someone's face and hands in the way they should be. Phew, technology these days, eh!

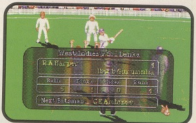


▲ Above we can see out little cricketers running for dear life to get those runs in.

## End of the day

Moaning aside for a moment, a sports simulation is a sports simulation, and looks aren't everything. Fortunately, the game itself remains as playable as it was first time round. As always seems the way with sports such as cricket, baseball, rounders, etc. it's always more fun batting than fielding, but being able to control the length of matches through some pretty comprehensive options means that you can at least control how long you endure bowling before getting back to the REAL fun.

The options are also nicely geared towards those of us that aren't too bothered about recreating specific line-ups; so select the 'Best Eleven' option and let the computer arrange your team for you. Then it's off to the pitch, er... court, um... field thing to bang lots of wood about for 90 minutes. Er... I mean an over.



West Indies v Sri Lanka

R A Harper 4

lbw b Gurusinha

| Balls | Fours | Sixes | Runs |
|---|---|---|---|
| 5 | 1 | 0 | 4 |

Next Batsman: CE Ambrose

▲ Who's up to bat next in this cliff hanger between West Indies and Sri Lanka? It's CE Ambrose no less.

▲ Here's the choice of teams. Today I'll be ...

And there you have it; a pretty comprehensive but accessible cricket simulation that, while not stunning, is by no means inadequate. The only real question you need to ask yourselves is whether you're really that bothered about updated and accurate batting averages, team rosters etc. If you are, then fine – you WILL be after this particular release – if not, then go out and scrabble through a bargain bucket somewhere. You might just find the original Graha, Gooch Cricket for a few quid cheaper. Good stuff nonetheless. ■

# Humans III

## Evolution - Lost in Time

**■ Price: £14.99 ■ Publisher: Gametek ✆ 01753 531831**

**Neanderthal man is alive and well and he's in a game no-one even knew about.**

▲ Here's two of the nasties just waiting to reek havoc. Looks like I've just been given a very unhealthy dose of radiation from R2D2's cousin.

▲ Here's some of the very special tasks that our little He-man can perform. Jumping, shooting, punching, balancing things on his head are just some of his many talents. What a regular little James Bond he is. Not.

In these lean times you'd think that any software company releasing a game would make a song and dance about it. Not so with Gametek. Their latest game Humans 3 appeared on the shelves without so much as a hint beforehand to the general public or the media.

It always makes me suspicious when a games company does this and in light of the review here, it would be easy to draw the conclusion that Gametek might have suspected this latest release wouldn't be that well received by gaming magazines. However, the fact that it hasn't been released at full price might save it a bit. We'll see ...

### The big bang

The original Humans was released in 1992 and games veterans will know that Humans 3 was one of the first games to be released on the Atari Jaguar.

The general consensus, at the time, was that it was just another Lemmings clone with nice graphics and similar puzzle type gameplay. Humans 3 follows exactly the same concept as its predecessors. It's a puzzle platformer that contains platforms, ladders, nasty beasties and all the usual puzzles to frantically solve before the timer runs out on you.

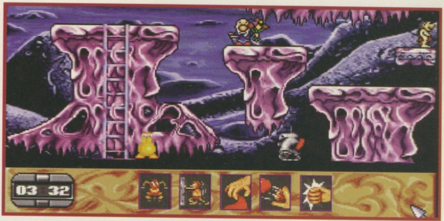
The plot is fairly simple. You start off with three characters under your control: Arthur the Caveman, Merlin the Wizard and Thorgrim the Viking. The aim is to locate six pieces of the Time Machine which have been scattered to the four winds (if that's possible). You can control each member of your your team individually to achieve the main level goal and piece together the Time Machine. Each character has his own action Icons and special abilities and when they co-operate they form a formidable trio of time travellers.



▲ Here's two of your main men: Merlin is holding the flowers while the other Arthur the Caveman is staring wistfully out of the screen.

## Under pressure

Life is precious in Humans 3. You have three continues which is fine, because you'll need 'em! The first levels are quite hard because as well as trying to solve the puzzles to get your humans to the exit you've also got to keep an eye out for crazed androids and yellow blobby aliens that ravage you if you're caught.

It's a shame that you still can't save the game at any time, particularly when things are about to get tricky because this would have ensured Humans 3 has a better longevity than Humans 1 and 2. Once you advance down through the levels, you do receive codes which help you to complete or enter in for later games.

There are seven worlds to puzzle through; The MoonBase, Ancient Egypt, Ancient China, The Viking Era, Modern Japan, Sherwood Forest and Camelot. And each world has its own indigenous background which adds to the gameplay. However, it all gets a bit too tedious. and indigenous background or not you're still left with a general feeling of sameness and boredom.

Why such harsh criticism? Well, apart from the tedium levels, the major problem is that everything moves so slowly and jerkily, meaning you never quite feel fully in control of your characters.

In Lemmings you can wait and strategically map your way across the platforms, altering your way to success accordingly. In Humans 3 you tend to find yourself blindly making decisions, leading you to instant death, falling off the platforms and all the while losing that precious time. This is frustrating. Personally, I'd rather go back to playing Lemmings or Fury of the Furries. ■

# Snip tips

by Matt Broughton, Games Consultant

**Once again it's time to bribe you with free Hit Squad games in exchange for top tips on all Amiga games. Cheers.**

## POPULOUS II

**Bullfrog**

Michael Coppins from Kent has not only the very last level code for this classic but a rather dandy little tip to boot.

First the tip: if you have the ability to use TREES in the vegetation section and have the COLUMN OF FIRE or RAIN OF FIRE in the fire section, then mass enemy destruction is but a moment away.

Simply lay trees all over the enemy land (which ain't too heavy on the mana) and then cause a massive forest fire using one of the above fire spells. If you make sure that the trees are all close enough to set each other on fire you'll create a fire that not only devastates the enemy's land but also keeps burning for ages and ages! Hmm, not very environmentally friendly but it gets the job done at least.

The last level code is WOITAB (level 999) and, apparently, it isn't at all hard. Cool.

## WORMS

**Team 17**

The never-ending stream of Worms codes continues (that's why we call it never-ending, thicky!) with Jason Cranwell having found the way to some truly marvellous curvy levels.

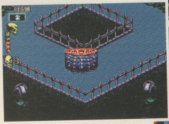
Just enter 8?? 632 or 9??632 (where '?' can be any number you fancy).

Basically, as long as the first three numbers are between 800 and 999 and the last three digits are 632 you're laughing. Have fun now ya hear.

## UFO: ENEMY UNKNOWN

**MicroProse**

There's always one isn't there? Some clever dick that hacks into directories and finds out what everything does (probably one of them bloomin' CU Amiga Magazine readers, I'll wager!). Still, saves donkers such as myself the bother having to sit down and do it, eh?



So you want tons and tons of money with no effort then? Easy – go to the save game directory where you'll find a file called 'liglob.dat'. Load this into a text editor and put two dollar signs at the beginning (ie $$). Save it and then load the game as normal. You should now have a whopping $600,000,000!

If you find that you have a bug that crashes the computer when the Reaper moves on a ground assault, go to the units directory and delete the files 'X_REAP.PAK' and 'X_REAPANIM. PAK'. Now make a copy of 'MUTON.PAK' and 'MUTONANIN. PAK', and rename these copies 'X_REAP.PAK' and 'X_REAPANIM.PAK'. Now when your soldiers see a Reaper it'll appear as green lumps but at least the game won't crash when it moves. A very small price to pay for six hundred big ones, I'm sure you'll agree!

## THEME PARK

**Bullfrog**

This is a bit of a variation on a cheat we have printed a number of times before but Mark Wood obviously enjoys a bit of variety in his life!.

All you do is have the game screen on and press Shift/Z/X, Alt/Z/X, Ctrl/Z/X. Now, every time you press C, you'll get £50,000 and all the rides.

▲ Typing in 'I'd rather be watching Forest' produces some handy cheats for Core Design's Skeleton Krew.

## ZEEWOLF

**Binary Asylum**

On pain of death I am asked to print all the level codes for this excellent game. Thanks to Steve Portland from Plymouth, it's an easy job …

**REQUIN**
**WOLFRAM**
**FUUMOON**
**JMARGUS**
**STAG**
**KRAKEN**
**STATION**
**GBULL**
**STATIPAUSE**
**DOITNOW**
**SHIPDECK**
**GLOBOFF**
**BEHAVE**
**SHADOW**
**MAXFUEL**
**REPLAY**

## SKELETON KREW

**Core Design**

A big of an oldy now (and it seems like only yesterday this was released!) but Saul Reid of Tilbury would like to remind us that by typing 'I WOULD RATHER BE WATCHING FOREST' you can then press Esc once you've selected a character and loaded the level to reveal a cheat mode. Now go down to 'Option' and press your joystick right. This will take you to a level select menu from which you can, er … select a level. Quite remarkable don't you think?

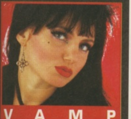
## FRONTIER

**Gametek**

Just in case there are still unbelievers out there, the jump-50,000-light-years-in-one-go cheat can be tested out by jumping from Sol to co-ordinates - -60,57 in one journey. Cheers to Sebastian Lau of Walthamstow for that reminder. ■

**And that's your lot! As always, just a quick note to thank all those readers who've written in (your games are on their way soon!) and to remind any others thinking of sending something in to let me know what machine you've got and what game you'd like (in an ideal world, obviously!) Be seeing you…**

# Adventure Helpline



VAMP

Adventuring may be a man's world but here's one girl who's seen it, done it, and wears the T-shirt better than anyone else I know!

## Eye of The Beholder II

I've gotten as far down in the dungeon as I can and reached a level where I keep having nightmares so I can't rest. There is a room here which has lots of pressure pads and writing on the wall which says, "You must leave many things behind". I've tried everything I can think of but the exit door won't open. I've also found ants in the floor below and cracks in the wall. Help?

**Peter Hall, Hundon.**

*Think of the number five on the face of a dice. You must drop objects in the same pattern as the four outer dots, then move your party onto the middle pressure pad to make the door open. You do realise that nothing good is going to come flying out don't you? As for the ants downstairs, there is not much I can tell you apart from the fact that new ants will keep coming through the cracks, so keep an eye open for reinforcements. I hope that when the insects take over the world they remember how often we used to take them on picnics with us.*

*While I'm talking about this game, let me give this information to those who've written to ask for the locations of the six chrome shields. There are three shields on level three of the Azure tower, two shields on level two and one on level one.*

## Space Quest I

I am stuck at the beginning of this game. I have in my inventory a cartridge, a keycard, three buckazoids and a widget. I can't get anywhere, however, as I keep getting killed by the guard.

**Miss N. Williams, Rhyl.**

*Yes, well, what can I say? You're not doing too well are you? You should use the lift to get to the bottom deck. At the pulsing lights you must type the command, "Push open bay doors" onto the console. Go right and insert the keycard. Go up in the lift. Press the left and right buttons, get the gadget and the suit. Go to the console and open the airlock. Go through the airlock and push the button on the console to raise the space craft. Enter the craft, fasten belt, push the power button, close the door, push the Autonav button and pull the lever.*

## Monkey Island II

I can't find the last ingredient I need to make the voodoo doll of Largo LaGrande. Apparently I need, 'Something of the Dead' to finish it off. Help?

**Christopher Dougherty, Bradford.**

*Well I'm 'Something of the Dead', (drop down dead-gorgeous anyway) but I'm afraid you can't have me, as I'm going steady with a zombie at the moment. However, I do know a lot about the dead and what I know is that if you go digging at the far side of the cemetery you could pick up just what your looking for. You will, of course, need a shovel to help you dig, so make sure you've taken the one from the sign which stands beside the bridge.*

## Simon the Sorcerer

I can't get past the dwarf guard. I think I'm supposed to give him some beer, but I can't seem to nick the barrel from the pub.

**Nylah Ali, Glasgow.**

*Make sure you pick up the matches in the pub and chop off the dwarf's beard using the scissors. Now light the smokebox from inside the cottage (use the pig to eat the door) and use it to collect wax from the beehive. Go back to the pub and order a drink, when the barman ducks down use the wax on the barrel. The landlord will now throw the barrel out because he thinks it's empty. Collect the barrel, wear the beard and you're in!*

## Indiana Jones: Fate of Atlantis

I am having trouble getting out of the labyrinth where Sternhart died. I am working with Sophia and I have the Oracle Gem. There is a chain in the waterfall which when I climb up I find myself back in the room where I used the whip on the statue with the bull-shaped head. What do I do now?

**K. Rothwell, Runcorn.**

*After finding the worldstone you can climb back up using the chain behind the waterfall. To go downstairs you must use the whip on the large statue's head. You must collect all three statue heads because you'll need to place them on a shelf at one point.*

*To get the gold box you first need to find Sternhart's staff and use it with the clock to release a counterweight and trigger the lift. Use the staff in a statue's mouth and the elevator will take you to the room with the gold box. Take the box and the two beads. To get through the closed gate you'll have to persuade Sophia to climb through the hole. Use the answers (2,2,1,4 and 2).Once in the Map room you'll have to use the amber fish to find the secret door, but first you must put all of the orichalcum (including Sophia's necklace) in the gold box.*

*You can only open one of the three doors in the Map room, as each one is for the path you are taking through the game (Wits, Fists, or Team). You better have the ship's rib from the dig site in Algiers with you at this point as you'll need it to dig yourself out through the final wall.*

*For anyone doing the Wits path who's got themselves stuck, there are a couple of differences. Use the statue which looks like the one stolen by Kerner with the minotaur's hatch. Place a bead in the statue.*

*In the Map room you must build an orichalcum detector by tying the clothesline to a hard rubber comb and charging it with static electricity from the woollen scarf. Use the detector to find the beads, then shut them in the gold box. Use the detector again to find the secret door.*

## Police Quest 3

Please tell me how to start off Day 4, I am very confused.

**Adam Noon, Thorngumbald.**

*When you arrive at the Police Station go to the Homicide Office and pick up the note from your desk. Go to the third floor and pick up a tracker device from the Head Technician, (it's in one of the desk drawers). Go to the ground floor and get in the black and white. Open the glove compartment and take the calibration chart for use in court.* ■

If you've got a little problem with your favourite Role Playing Game and would like Vamp to help you out, drop her a line at CU Amiga Magazine, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

FINAL THOUGHT: I DON'T GO TO ALL NIGHT PARTIES: THEY JUST SPRING UP WHEREVER I HAPPEN TO BE.

# Tech Scene

**The technical section is exciting this month, with several big software releases, all of which push forward the Amiga's boundaries in a significant way.**

CD-ROM Drive p54

## 48 OctaMED SoundStudio

The latest version of OctaMED is almost unrecognisable: but you'll still love it. Professional sound here we come.

## 52 Final Writer 5

Is the latest version of Final Writer a match for its Wordworth adversary? Find out on page 52.

## 54 Ultra IDE CD-ROM drive

This could be the answer to the problem of buying a heavyweight CD-ROM drive for lightweight bucks.

## 55 Quarterback Tools

The latest version of a world renowned back-up system is tested; and the result is hardly a surprise.

## 56 Development Tools

Since Commodore went out of business developers have had to go it alone. Now Amiga Technologies and GTi have released some help.

## 60 PD Scene

The wonder of the Aminet is shown by this month's PD scene: all of the material has been leeched from this great site.

## 62 PD Utilities

This month's PD Utilities includes an update to our SoundTracker cover disk, a thumbnail creator and more.

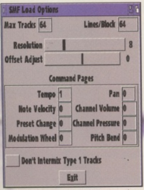
AMIGA SUPERSTAR

**64 channels of 16-bit stereo audio from your Amiga? It's possible with OctaMED SoundStudio.**

Judging by the modules submitted by readers for this month's cover CD, OctaMED is far and away the most popular tracker among our readership. It's not attained such popularity by chance – the legions of unique and special features it offers have made it the first choice for Amiga musicians ever since it raised itself above the basic level of many other trackers. Now it's changed its name and done just about everything possible to turn your Amiga into a 64 track 16-bit stereo music machine.



SMF Load Options
Max Tracks 64

▲ There are now even more features to make it as easy as possible to integrate MIDI and samples.

While it's true you can get stunning results from the most simple traditional style tracker program (see the Dex and Jonesey feature on page 26 for proof) OctaMED, now SoundStudio offers a totally unrivalled list of unique and powerful features, including MIDI sequencing, powerful sample editing, multiple command pages (well worth checking out) and reams of options to let you tweak every possible aspect of your tunes to perfection. However, the real star of the show this time round is the all new Mixing section which makes it possible to run up to 64 sample channels with realtime effects through the normal Amiga audio, direct to disk or through one of a few 16-bit sound cards.

## 64 Channels

SoundStudio will still run in standard four channel mode but if you want to make use of these new multitrack modes you need to invoke the Mixing page. This is the part of the program that controls how your numerous tracks are combined into a single sample and where they are sent after that to be replayed. The theory is the same regardless of the number of tracks and the output device. When you start your module playing, the relevant samples are resampled to the pitches specified in the tracks, processed with any player commands that have been inserted and then combined into a signal that's sent off to the chosen output device. Other factors are also taken into consideration during mixing, such as the stereo position of each track and whether any echo effects are to be used. See Sound Lab on page 81 for more on 'mixing' theory.

▲ You can use SoundStudio in any available screen mode and snapshot the windows just as you like them.

The 16-bit output options include the Toccata card (as reviewed April 96 CU Amiga Magazine) and the new Delfina DSP card (review next issue). These are both Zorro cards requiring a big box Amiga. Aura, the only soundcard for the A1200, cannot be used as an output in this way, although you can incorporate Aura samples within your tracks.

This mixing approach opens up other new possibilities. When the Stereo option is activated, each track can have its own pan position. You can even use stereo samples: they take up just one track and replay with all the stereo panning intact. A new command (code 20) can be used to set the pan position of a sample within the playing sequence. This makes it easy to set up parts of a song in which a particular sound moves around the stereo field in a specific way and also has possibilities for effects like rapid random panning and so on. Playing samples backwards is now possible too (previously you would have to reverse the sample wave and then play that forwards). This also means you can set up 'ping-pong' loops

▲ The new 'Mixing' mode is the star of SoundStudio, with 16-bit stereo panning and realtime effects on offer.

on samples, which is one way of creating a smooth sustained loop from a long evolving sound.

Whether you are using an 8, 14 or 16-bit output, your modules can be made up of any combination of 8 and 16-bit samples. They are all scaled automatically according to your settings.

## Direct to disk

With the option to record direct to an 8 or 16-bit disk file (MAUD or WAV) you can even master your own tracks for CDs without ever making an analogue recording (you don't even need a 16-bit card to output a 16-bit disk file). To demonstrate this we've included an audio track on this month's cover CD. This was created using 16-bit mono and stereo samples then recorded straight to a hard drive at a rate of 44.1kHz (the standard CD audio rate). This is where the Smoothing option comes in handy. The mixing stage introduces some unpleasant noise which detracts somewhat from the overall sound quality. However, with the Smoothing filter turned on this is eliminated. It seems that a little of the high end frequencies of the song are also muted but not to any great degree.

Smoothing the output takes a lot of CPU time and so it's not feasible to use it during realtime playback normally (everything goes a bit wobbly) but this doesn't matter when you're recording to disk, as there's built-in time correction, so you'll end up with a good clean sound even if it takes half an hour to record a five minute song. The end result is a massive sample file which can be used to cut an audio CD using a CD-writer drive and some software such as Master ISO (the software we used to make this CD). In this way you could record and master a complete CD album using just one Amiga and no external audio mixers at all!

## Realtime FX

Yet another new treat on offer is the realtime effects page. From here you can select one of two types of echo and alter the echo rate and depth of each, along with the stereo separation. This can be

## Output quality

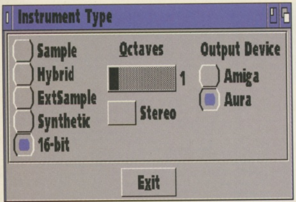
**In order to make use of SoundStudio's 64 channels of sample playback you'll need to choose one of the mixing routines. The best ones are those that use a 16-bit sound card. There are also a couple of mixing options for standard Amigas and direct to disk recording features. If you are running just four channels you can use the old-style 8 bit mode. This is how they stack up.**

**Toccata, Maestro and Delfina:** the routine is the same for each of these three sound cards. After all the tracks have been mixed together (which is done in realtime as the song plays) the combined 16-bit audio signal is played out through the chosen device. We tested this extensively with a Toccata fitted in an A4000/040.

**While you can set the output rate to 44.1kHz or even 48kHz in 16-bit stereo, without the smoothing filter activated there is still some mixing noise which is most apparent when the range of frequencies being played is fairly small, such as when only bass parts are being played. This noise is very much like the noise you hear when playing samples at very low rates. Normally the smoothing filter cannot be used in realtime unless you have a very fast CPU (eg. 68040) and just a couple of samples playing at once. However, once more instruments are added and the range of frequencies widens, the mixing noise becomes far less prominent. So long as clean samples are used there are no other problems with sound quality. Overall the results are very good, although certainly not faultless.**

**Amiga 8 bit:** the quality you can expect depends on the CPU power you have, which dictates the maximum mixing rate you can use. If you are using a video screen mode (PAL or NTSC rather than VGA or Productivity for example) you are limited to a maximum mix rate of 28kHz. In 8-bit mode the results can be quite noisy but as with all the other modes, once there's enough going on in the song the noise doesn't sound too bad.

**Amiga 14 bit:** there's a big difference between this and the 8-bit mode. Although the overall output is not as loud as 8-bit, there's a definite improvement in sound quality. Parts of modules that sound very dirty in 8-bit mixing mode come through much cleaner. Even though the mixing options allow you to add echoes, stereo panning and lots of channels, the actual clarity of the output is not quite as good as old-style four channel replay (which is to be expected).



Instrument Type

○ Sample

● Aura

▲ Each instrument can have its own 'type' setting, most useful in four channel mode and for Aura (see right).

activated while you're making up your tracks too, so whenever you bang out a little riff on the keyboard you hear it with the echo effects. Unfortunately when you play your module the entire sound is passed through the echoes, which generally leads to a rather muddy result, although you can set the delay time very precisely which is a big help. It's a shame you can't assign certain tracks to the effects and leave others 'dry'. Even so this will come in very handy.

There are a handful of other minor benefits which stem from all this mixing business. Because the samples are all rolled into one and processed before being replayed, some of the limitations of the Amiga's built-in sample replay routines are no longer a problem. For example, the maximum sample length used to be 130K but now you can have samples as big as you like (RAM permitting). Samples can now be played over a range of six octaves instead of three.

## MIDI modes

The tracker environment has never been the best place to record MIDI music but the ability to record and sequence MIDI gear alongside module tracks is another of OctaMED's unique pluses. Without such an option, Amiga music software options are split into two opposing camps of tracker and MIDI sequencer. Fortunately SoundStudio is well stocked with MIDI features, so when you've reached the limits of your Amiga's audio it's no problem to add a MIDI synth to expand your options. Now there are some additional MIDI features.

You can now set one Amiga to become the 'master' machine and another to become the 'slave' in a new way of getting two versions of OctaMED playing at once. Up to 16 samples can be used on the slave Amiga, each one assigned to its own MIDI channel. These samples are triggered via from the master machine (which runs an eight track module). The main advantage this has over the old style (using 'send sync' or manually synchronising two machines) is that you only have to compile the module on one Amiga, rather than having to make two modules running in parallel with two resulting module files.

Another useful addition in the MIDI department is the ability to assign any MIDI controller to commands 31 to 3F (previously this was a bit complicated requiring two consecutive commands).

## Conclusion

OctaMED has earned its new name. Its programmer Teijo Kinnunen has worked some minor miracles and apparently added just about every feature that has ever been requested. Going out on a limb with support for 16-bit sound cards is a major advantage, and even then the software manages to do absolutely amazing things with the hardware (such as squeezing 64 16-bit channels with effects from Toccata, officially a simple two channel record and replay card).

It's owners (or future owners) of these 16-bit cards who will get the most from SoundStudio. The multi channel Amiga options are still more fuzzy than standard four channel mode, so if you use 8-bit sampling for commercial recordings the benefits of multiple tracks, panning and effects will probably be outweighed by the loss of sound quality.

They say this will be the last ever version of the program, but between you and me I think they're testing the water to see what reaction they get. With good sales and feedback we could see another upgrade yet. Whether we do or not, I'd advise any Amiga musician to get hold of SoundStudio and sample its delights without delay. You won't be sorry you did. ■

**Tony Horgan**

## CD-ROM version

**The CD version comes with loads of extra goodies but with no printed manual, just the AmigaGuide manual (in German, English, French and Italian versions). There are loads of modules and a very large selection of sound samples that vary in style and quality. Extra software on the CD includes the module converter AMFC, Menÿ (a neat menu creation system) and the sample replay tool Play 16, which comes in handy for playing the demo song stored on the CD as a massive 37Mb sample file. If you're not too bothered about having a printed manual then the CD-ROM version is definitely the best option.**

## I can see your Aura from here

**HiSoft's 12-bit PCMCIA sampler is not included on the list of output devices in the mixing section, but you can make some use of it, channelling any 16 or 8-bit samples through it at the expense of one of the standard Amiga channels. Now you can sample straight through the Aura card from within SoundStudio and the results are good and clear. Just what you do with your Aura samples once you've taken them is another matter.**

**The main problem seems to be that it demands a lot of CPU power merely in order to replay a sample. The highest sample rate it can replay depends on your CPU power. To stop the computer crashing if you try to play to high a frequency through the Aura, you need to set a maximum rate by hand. This is awkward and not at all satisfactory and once you do get it working, it takes so much CPU power to play samples at a decent rate that everything else often goes haywire. Quite often the sample will change pitch halfway through playing. Frankly it's a lot of trouble to go to for very disappointing results.**

▲ You can now base a new document on a template. Some examples are supplied with the program while others can be created by you and saved for use later on.

## What delights does the latest version of this classic word processing package have? Let's find out shall we?

With all the confusion that's around at the moment about the Amiga's future, it's nice to see a new product that's likely to bring a smile to those of you who use Final Writer. Release 5 of this great word processor is packed with new features, such as Tables, HTML export, RTF Import and Export and much more that have long been on people's wish lists. However, I've seen many a program that flagged much wanted features only to find it is disappointing in practice. So, the proof of the pudding is in the eating. This is, however, Final Writer we're dealing with and with its track record, I didn't expect to be disappointed.

## Multi-talented

First impressions were a let down as I didn't see much difference between this and previous versions. However, once I dug a little deeper I discovered a new menu for Tables and many other new additions to the various menus.

There will be many of you no doubt, who like me, won't have a lot of use for a tables function, but this one in Final Writer is nice nonetheless because it's so multi-faceted. First and foremost, you can use it to create tables to store various types of data, although I was shocked to see no mention of Final Calc or Final Data in relation to being able to share information between them and Final Writer: Wordworth will let you import spreadsheets from TurboCalc after all. But that niggle aside you can also use the tables function for doing captions for pictures or multi-line secondary columns of text.

Creating a table in Final Writer is similar to Word for Windows. You use a requester to set out the attributes for the table such as the number of rows and columns. If you misjudge how many columns or rows you require, these can be inserted later.

What I didn't see was a feature letting you apply mathematical functions to data within a table, hopefully that will be available in future versions. You can jazz up the presentation of your table using items such as line weights and coloured fills. The width of a cell can easily be adjusted but the height of a cell is self adjusting depending on the height and

▲ Typos can be thing of the past with the Auto Correct feature for correcting commonly typed errors.

number of lines of text. There isn't however a rotation facility and you cannot place a table over other objects or make it transparent.

## Other programs

Another major new feature is RTF support. This is a common file format used for exchanging files between WYSIWYG word processors on various computer platforms. The problem with using RTF instead of ASCII is that it doesn't support everything but at least it's there for those who don't share my view.

One of RTF's more useful functions is its Font Mapping feature where you can tell Final Writer to replace a font from the file being imported to a similar looking one on the Amiga.

Do not, however, think that RTF will be the answer to your dreams. In some simple examples RTF works fine, but add graphics or things like WOBS (white on black) tables and so on to a page, and they will need to be re-created in Final Writer as they are not supported by RTF.

## DIY Web

Those of you who enjoy surfing the WEB will love Final Writer's HTML export function. This will take a Final Writer document and export it so it can be loaded into a WEB browser. This is not easy to do because WEB browsers only

**Captions:**
*Final Writer 5's table tool, can also be used to write multiline captions and so on.*

▲ The tables function in Final Writer can be also be used for creating captions and multi-line blocks of text.

## So what's new?

- Font menu item on layout menu
- Enhanced define styles requesters
- Save sets of preferences to disk for use with other documents
- Save sets of styles for use in other documents
- Support for document templates
- Auto correct facility
- ASL file requesters
- Move sections within a document
- PreLoad commonly used Fonts
- Tables function
- RTF export and import
- Datatype support
- HTML export
- Many new ARexx commands

## Upgrade prices

- **Full price is £74.95**
- **Upgrade from any other Softwood package £39.95**
- **FW Lite to FW5 £29.95**
- **FW4 to FW5 £22.95**

Call me on 01908 370 230

*This document was created in Final Writer 5 on the Amiga!*

Line: 15.0 pc. Pos: 12.0 pc. Page: 1 12:15 PM 20/7/96

**▲ Final Writer comes with a template containing typical Styles required for a HTML file as well as a SaveAs function that converts what you see on-screen into a text file with the necessary HTML codes. This can then be edited if need be.**

support limited page formatting functions so you must follow the guidelines in the manual when creating such documents. Final Writer is not an HTML editor however, so it should be treated with care when creating WEB pages because it is so easy to create 'illegal' elements and have to go back later to correct the problem.

The HTML function also has drawbacks if you want to use pictures. While a text document I created imported fine into my WEB browser, adding pictures was a pain. For one thing, the new datatype support for Final Writer, is only as good as the datatypes you are using and although some of mine worked fine, sods law meant the GIF and JPEG ones did not. There were other problems as well such as producing links to other HTML documents but as I couldn't get hold of anyone from Softwood for advice on this, I'll have to leave that subject for another day.

The saving grace of course is that Final Writer is a word processor and as such can be used to create the HTML files manually. I find, for example, that by keeping pieces of useful HTML code taken from other HTML files, I can cut, paste and modify anything that Final Writer doesn't support.

## For the masses

So far, the features I have looked at are specialist ones. Tables, RTF and HTML are all features that the minority will probably use rather than the majority. The only exception being the tables facility for adding columns of text.

There are many more features that everyone will benefit from too though. Final Writer 5 now supports the creation of a document from a template. A number of templates are included, like one for HTML with Styles already created for you, but if required you can also add your own templates. You do this by saving a Final Writer document to disk and then choosing 'New From template', whereby it gives the chosen document an Untitled name so you can't overwrite your original document.

For fumble fingers like me, another new feature that is long overdue is AutoCorrect. This is where you look out for common mistakes and have the program correct them automatically.

As already mentioned, Final Writer 5 supports datatypes which is one way for it to import graphics formats other than IFF-ILBM. The problem is, many datatypes are worse than useless and so it was with a number I tried with Final Writer. The TIFF one I used first worked fine, but the GIF and JPEG ones did not, which meant I had to spend time looking for others. Relying on what are primarily public domain utilities for functions within a commercial application is asking for trouble and I would have been a lot happier had it come with its own filters that worked.

On top of all these features are many others including an increase to 256 for the number of styles you can have in a document, a function that enables you to re-arrange sections within a document, another function for saving Styles and a facility for saving TypeSpecs as macros.

## Overall verdict

This upgrade is what I would have hoped for in version 4 and I expect it will find favour with many Final Writer users. For those asking the question, is it better than Wordworth 5, the answer is yes and no. There are no footnotes, for example, and both programs are still able to do things the other cannot. So although this upgrade is very welcome, and makes Final Writer a much better program to use, there is still yet more work to be done. Final Writer, for example, still insists on remapping the colours in an image when you flick back from another screen. When viewing a document with 256 colours, this remapping can take up to a minute and being impatient, I'd prefer if it just didn't do it.

When using the Replace function, Final Writer only allows you to enter 16 characters into the Replace gadget. For me, that's annoying, others may not however find it a problem. I would also like to see a font preview so I can see the look of the font being selected.

The shining light, however, with Final Writer 5 is that work is still progressing on the program and that is a godsend because we Amiga users need not only new machines, but stalwart developers like Softwood to keep on producing better products and Final Writer 5 is a very good product indeed. ■

# Ultra CD-ROM

**■ Price: £See boxout ■ Developer: Siren Software ■ Supplier: Siren Software © 0161 796 3208**

**CD-ROM is the fastest growing area of Amiga expansion ... and the drives are getting cheaper by the month.**

The PC community is used to using IDE as opposed to SCSI CD-ROM drives. The Amiga community is not. Although products like the Alpha Data PCMCIA interface have allowed IDE drives to be connected, the most popular method has been to use a SCSI drive and the Squirrel SCSI interface, also via the PCMCIA slot. The problem is that SCSI drives are more expensive than IDE drives (more than twice the price in some cases) and what if you want to use the PCMCIA port for something else? The only other widely known alternative is ito install a SCSI chip onto an accelerator, but the combination is often expensive. Enter Atapi.

The A1200 has both been fitted from the outset with an IDE interface on the motherboard. This is used to mount 2.5 inch and 3.5 inch hard drives internally but with a little bit of help it can also be used to mount an IDE CD-ROM drive – with some help from Atapi. This is an acronym for Advanced Technology Attachment Package Interface. Siren Software have started distributing three competitively priced CD-ROM drives which use this interface and the IDE slot in your Amiga to give you drives which do not jam the PCMCIA and are cheaper than their SCSI equivalent.

The one reviewed here is the four-speed version and costs just £169.99. Getting it up and running involves taking your machine apart, but since you must already have a hard drive installed to be able to run this device chances are that you are already familiar with the innards of your Amiga. If you're not, stop here and think seriously. If your machine is still under warranty, removing the case voids this. If you are not even slightly technically minded then you could do irreparable damage to your Amiga and hard drive so get an expert to do it instead – or stick to the external PCMCIA technology of the Squirrel.

## Nice fit

Installing this drive should take under 10 minutes. You remove the top casing of your Amiga and its keyboard, unscrew the floppy drive and remove this, then slide out the covered slot on the back of the bottom casing just behind the floppy drive. Then the hard drive cable needs to be removed from the IDE interface and replaced by a long cable supplied in the Ultra CD-ROM kit. If you are using a 2.5 inch drive there is a tailor made female connector just an inch or two above the interface connector which allows you to reattach the drive again immediately.

Next up you fit the Atapi interface, a printed circuit board with one 44 pin and two 40 pin connectors (one of these is for a 3.5 inch drive if you normally use one the other is for the CD-ROM drive). This slides into the empty port at the back of the Amiga mentioned above and is screwed in place with ease – there are no extra holes or modifications involved. Once this is done, the IDE cable is connected to this and you can place your hard drive cradle back where it belongs, screw the disk drive back on and replace your keyboard and the casing. Then you connect your CD-ROM drive to the 40 pin connector now poking out of the back of your Amiga, boot up, install the provided IDE-Fix software and you're up and running. Theoretically.

## Prices

**This drive comes in four, six and eight speed formats. Here is what they cost:**

**Ultra Four-Speed: £169**
**Ultra Six-Speed: £199.99**
**Ultra Eight Speed: £239.99**

## Look at this baby go

**We tested the £169 Ultra with its Hitachi IDE quad speed drive alongside the £189 HiSoft Sony 2.4 speed SCSI drive – the closest in price on the SCSI/Squirrel front at the moment – which we use as standard in the office. Both were tested on A1200s with Blizzard 1230 accelerators and 8Mb RAM. The tests we ran were designed to examine the raw transfer speed using SySinfo, the practical transfer speed of copying a reasonably large file from CD to RAM and the practical speed of transferring a lot of smaller files in a drawer to RAM. The results were as follows:**

| | Atapi IDE 4-speed | Squirrel SCSI 2.4 speed |
|---|---|---|
| Sysinfo: | 604,957 bytes per second | 357,794 bytes per second |
| 1.4Mb folder, various files | 12 Seconds (116.7k/s) | 7 Seconds (200k/s) |
| 4.7Mb single lha file | 8 Seconds (587.5k/s) | 13 Seconds (361.5k/s) |

**The Ultra is faster with large files, as its SySinfo reading indicates, but the HiSoft drive is faster transferring many smaller files. This actually has more to do with the drive mechanism than IDE/Atapi versus SCSI. The Sony drive can simply jump between files faster than the Hitachi.**

There are three problems though. Although the instructions provided suffice, they could have used a lot more illustration to make their point. Also, the cable provided to us was set up wrong: according to the instructions it had to be attached to the Atapi device in a specific way. This was not the case and after several attempts to start up the drive the problem was located and switching the connector around solved the problem. However this involved removing the casing again, an unnecessary hassle. Siren assure us that this is not a normal occurrence and we have no reason to doubt them, but it does highlight potential traps for the inexperienced.

The third problem relates to the type of hard drive used in conjunction with the CD-ROM. IDE hard drives have jumpers which dictate whether they are the sole device or whether another is used.

The 3.5 inch hard drive on another of our Amigas had such a setup and for the life of us we couldn't get it to work. The drive is old so the jumper diagram no longer exists (if indeed we ever had one) so we gave up in fear of losing the gigabyte of information on it. No such problem occurred with the 2.5 inch drive but the potential will always be there.

## Conclusion

There was initial suspicion when this drive arrived in. £169 sounds cheap for an Amiga CD-ROM drive but internal quad speed IDE drives are selling in PC magazines for £50 or less now, so it didn't look such a bargain. Then again, there is an external case with a power supply which certainly adds to the cost and will be necessary for most people. It is also supplied with IDE-Fix and the Atapi adaptor. All put together with instructions it minimises the amount of DIY you have to do – with a consequent price tag.

The transfer speed was almost double that of the SCSI drive we tested it against, although this is partially because that was a 2.4 speed unit (but still costs £20 more). The six and eight Speed drives also available from Siren are not to be sniffed at either. Like most SCSI drives the Ultra has reasonable CD32 emulation too.

This drive suffice for most people's usage and, keeping the potential technical problems in mind, if having a free PCMCIA slot is a priority then you should seriously consider it. ■

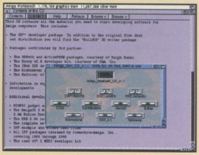
# Quarterback Disk Suite

■ Price: £34.99 ■ Developer: Quasar
■ Supplier: Wizard Developments ✆ 01322 527800

### Keep your Amiga valuables as safe as houses with this two in one pack.

Quarterback, a hard disk back-up and recovery system, is one of the those programs which I have been using for years. So, I was very happy to discover that it has just been re-released by Wizard Developments. I was even happier when I discovered that both Quarterback utilities: a back-up program and a disk tools suite, are on Wizard's one disk pack.

The back-up program is so powerful and easy to use that in all seriousness, you really might be tempted to use it on a regular basis. It can back up to floppy or SCSI tape drive, handle dates and make incremental back-ups. It can automatically compress files, and supports multiple floppy drives. Basically it's terrific: one of the few back-up programs I have used regularly. I always warn folks to back up their hard drives. You know why? Because I also use Quarterback Tools.



This CD contains all the material you need to start developing software for Amiga computers. This includes:

- The CD³² developer package. In addition to the original five disk set distribution you will find the "BuildCD" CD writer package
- Packages contributed by 3rd parties:
  - The WBPath and ActionPREM packages, courtesy of Ralph Babel
  - The Envoy v2.0 developer kit, courtesy of IAM, Inc.
  - All IFF packages released by Commodore-Amiga, Inc., covering 1986 through 1992
  - The camd v37.1 MIDI developer kit

Tools seems to have able to fix everything which has happened to my hard drives over the years (with the possible exception of the time I dropped the bare drive mechanism onto a concrete floor). There are four options: Analyse and Repair (for when Bad Things seem to be happening to your drive), Optimise (for reorganising the drive and speeding it up no end), Recover Lost/Deleted files (for fixing 'accidents') and Edit (for low level file editing).

As with the back-up program, there is a full ARexx port which makes advanced macros possible. Also supplied on the disk are bonus programs which are worth buying by themselves. Schedule Pro will trigger programs at certain times, and although primarily designed for reminding you to make back-ups, you can use it for almost anything. AmigaDOS programs and ARexx scripts can be programmed to occur using the simple day/date/time display.

You'll also find Locator essential for tracking down files quickly, and you may even find a use for the floppy disk duplicator, encryption routines and file deletion options.

Every program in the suite looks extremely smart, with a distinctive and classy appearance. What is more important though is the reliability, and as I said, I've been using the programs for years and they simply get better.

At this price, it's a bargain which you shouldn't ignore. If you are having any problems with your drives and if you want to prevent problems from happening in the first place, order your Quarterback Tools Deluxe as soon as possible. ■

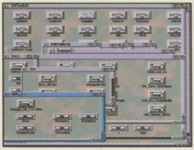
# Amiga Developer CDv1

**■ Price: £14.95 ■ Developer: GTI and AT ■ Supplier: see adverts for UK suppliers**

**Christmas has come early for Amiga developers in the shape of this CD. It's got all you need and more.**



▲ **The NDK directory contains the original AT five disk Native Developer Kit.**

Amiga developers haven't been particularly well treated these last few years. As I write there is still no Amiga Developer Support Program, so this CD comes at a time when it will be most appreciated.

Previously you had to write off to CATS (Commodore Amiga Tech Support) and for around £15 they would send you the five disk NDK (Native Developer Kit) with everything they had on it, but that service ended ages ago. The Developer CD1.1, however, includes all this and more, so for new developers it's a must have.

If you've never had anything like this before, the most useful part of the CD you will find is the 'NDK_3_1' directory. This contains the unarchived versions of those five disks.

## The essentials

Everything you could need is supplied on the disk in a very easy to understand format. First we have the Autodocs. If you've ever tried developing software that uses the OS without the Amiga Autodocs, you'll know what a nightmare it can be. Luckily that's not a problem here as the Autodocs on the disk are summaries of library and device functions, in standard form, stripped from the OS source code. There are descriptions of all the Amiga OS libraries and device functions, some with short examples. Having the documentation for every Amiga system library function is invaluable. Thankfully, the Autodocs are in text format and in AmigaGuide form which is useful as it's not much fun having to convert them yourself. And there are lots of tutorial files explaining how to use the 'new' features of OS3.0 and OS3.1. Also included are the Release 2 examples from the RKM books, and a collection of AmigaGuide Volume 1 and 2, covering Spring 1987 to April 1993.

In addition the disk contains the latest version of the Includes. Even if you don't use 'C' you will find these useful as they are full of helpful explanatory comments.

No serious developer should be without DevTools. Luckily

▲ Everything you've ever needed to develop software on the Amiga on one CD.

Enforcer, Mungwall and Sushi form a team that will keep your code on its toes and spot any nasty things it might be doing (this is what those MMU thingies are for). A new version of Enforcer will be of interest to seasoned developers, though it would be even more interesting if the docs mentioned the new features.

Networking wise, the disk contains the Envoy v2 developer kit from IAM, the INET 225 dev kit, and the SANA-II package plus developer kit.

CD developers will have a field day with the CD32 Native Developer Kit, there is nearly 4Mb of useful stuff here, including tools for building CDs (if you have a Phillips CD521), CDXL and MPEG example source code, a CD32 emulator for testing, and lots more. Another interesting section is on guidelines for writing code that won't break on new (PPC) versions for the OS.

Several people have made contributions to the CD. Angela Schmidt has written a very useful program called 'Kiskometer' to display what patch is what, so you can see what all those nasty little hacks you run actually patch. Ralph 'DOS Guru' Babel has also contributed several tools showing how to accomplish several feats of DOS magic. The latest v43.3 Installer package is included as well, with an updated license agreement dated May, made addressable (regrettably) to Escom.

The CD doesn't skip on IFFs either as there is large amount of IFF resources on the CD, including lots of example source code and test files, not just for pictures but a wide variety of IFF types. Many, many IFF chunks are also fully documented, from 8SVX to YUVN.

## Minor problem

This disk is simply packed with superb stuff, however, I do have one bone to pick with it in that it would have been good to have a nicer front end for the documentation. Getting around the disk is OK as there is an AmigaGuide front end, from which you can jump to any file on the disk. However, I think that AmigaGuide just doesn't cut it anymore. I would have liked to have been able to quickly look through the documentation for what I'm after, keeping bookmarks as I go. A list tree with all the topics in it for easy navigation would have been handy. Ideally, some sort of search facility would have been best. For example, it would be good to be able to type in 'copy' and then view the Autodocs entries for functions starting with 'copy'. Something like InfoView on the PC would have been useful and saved time. Anyone want to take up the challenge?

## Excellent stuff

This minor niggle aside, the CD is an invaluable resource to anyone who doesn't have the Native Developer Kit. Developers with all the old stuff will have most of the files already, but the CD also has some worthwhile new stuff. It is also extremely convenient to have everything available, unarchived, all in one place. And at this price you can't afford not to get it.■

AGA Experience Vol 2

94% Amiga User Int.
85-90% Amiga Joker
"One of the best Amiga CDs I have ever used!"
88% CU Amiga
"A very well put together CD"
90% Amiga Computing
82% Amiga Format
(82% – what A JOKE!)

I think most of you know what the AGA Experience is all about, take a look at some of the review scores and forget what Amiga Format thinks, here's what a small percentage of the buyers think:

"Excellent" – *Mr P Morey* "Very good" – *Claudio Marro Filosa* "Very good, look forward to the next Vol" – Frank Jensen, "It is Great" – *Absalon Ostero* "Excellent, the best CD in my collection" – *Andrew Taylor* "Vast improvement on Vol 1, please do a Vol 3" – Mark Payne "Very good value" – R. Eyles
£15.99

The Utilities Experience Vol 1

The Utilities Experience is the latest in the great SAdENESS Software CD Rom series. It features over 500Mb of the best serious Amiga Software (95% of which will run directly from the CD).

This CD includes all the Amiga's classic utilities (like Disksalv, Iconian, ReOrg etc), and also the latest versions of new titles. Also included are thousands of amazing icons and backdrops, a massive collection of emulators, comms tools, Workbench and Shell tools, plus much more!

This CD uses the same great MagicWB icons and interface we used on our previous CD titles such as the AGA Experience Vol 1&2.

All this for just £12.99

## OH, FOR THE WINGS, FOR THE WINGS OF A DOVE......LA LA LA....

ANOTHER INSTALLMENT OF THE BEST AMIGA SOAP STYLE AD AROUND! WILL JANE KEEP THE BABY, WILL JOHN LOSE THE CONTRACT, HAS JOHN AND JULIE'S LOVE GONE FOREVER, WILL THERE EVER BE A CAST MEMBER THAT'S NAME DOESN'T START WITH 'J'.......FIND OUT NEXT WEEK.....

OK, SO WHAT HAS THE OFFICIALLY NUMBER ONE PD LIBRARY GOT A-HAPPENING THIS MONTH? WELL, WE START WITH AN APOLOGY. WE HAD A MISPRINT ON OUR OFFICIAL AWARD, WE ARE IAT PD COMPANY OF THE YEAR 1996. SORRY EVERYONE WHO WROTE IN TO TELL US, AND THANKS AGAIN TO ALL THOSE THOUSANDS WHO VOTED US BEST BY A BIG MARGIN! ANYWAY, NOW THAT'S CLEARED UP (WITHOUT CREAM) WE'LL GET ON SHALL WE?

WELL WHAT ON EARTH MAKES US THE BEST LIBRARY SINCE SLICED, ERR, DISKS? WELL, THERE'S

* THE LOWEST PRICES IN THIS MAGAZINE BY A VERY LONG WAY (ANYWHERE ELSE WITH 10 DISK PACKS FOR 2.50, I DON'T THINK SO....)
* 24 HOUR TURNAROUND. WITH OUR TURBO POWERED PD WE ALWAYS OUTSTRIP THE COMPETITION FOR SPEED. WE'RE NOT CALLED V12 FOR NOTHING!
* THE LARGEST SELECTION OF HIGH QUALITY PD ANYWHERE IN THE WORLD. OVER 14,000 TITLES AND ALL AT 50P EACH! IF YOU WANT IT, CHANCES ARE WE ALREADY HAVE IT AND 3 DIFFERENT PROGRAMS LIKE IT TOO!
* UNDENIABLY THE BEST CATDISK IN THE WORLD. THERE QUITE SIMPLY ISN'T A CATDISK THAT HAS HAD SO MUCH TIME SPENT ON IT. SORRY, BUT PERFECTION WAS DEMANDED IN A CATDISK AND WE BELIEVE WE'VE GOT AS CLOSE AS IT'S POSSIBLE TO DO WITHOUT LOOKING INHUMANLY SMUG ALL YOUR LIFE.
* MORE WORLDWIDE SWAPPING CONTACTS THAN YOU COULD IMAGINE, PD COMES IN FROM DOZENS OF LOCATIONS ON EVERY CONTINENT (EXCEPT ANTARCTICA, CURIOUSLY.....) THIS MEANS MORE EXCLUSIVE PD THAN YOU'VE EVER SEEN! AND ALL AT 50P EH, I CAN'T IMAGINE HOW IT'S DONE....).
* FRIENDLIER SERVICE THAN YOU COULD EVER DARE TO EXPECT, NO QUIBBLES RETURN POLICY GUARANTEED, AND THAT'S A PROMISE.

OUR NORMAL PRICES (WHEN WE'RE NOT PUTTING TOGETHER SOME INSANE PACK OR OTHER THAT'LL LIKELY BANKRUPT US!) ARE MEASLY PEASLY WEASLY LOW, BUY THERE'S SOMETHING A BIT SPECIAL THIS MONTH, BUY 20 DISKS FROM US AT 50P EACH, AND, AND, YES, AND, WE'LL GIVE YOU 10 FREE ON TOP OF IT OF YOUR CHOICE! BLIMEY MISSUS! YEP, 30 DISKS FOR 10 QUID, AND 30 DISKS OF YOUR CHOOSING TOO! 30P A DISK SEEMS LIKE HEAVEN IN A SMALL JAM JAR TO ME, HOPE YOU AGREE....

**1-5 DISKS = 65P EACH**
**6-9 DISKS = 60P EACH**
**10+ DISKS = 50P EACH**
**20+10 DISK OFFER = 10 QUID FOR 30 DISKS INCL P+P!!!!**
**P+P IS ONLY 50P ON ANY SIZE ORDER!**
**DISKS ARE 25P EACH INCLUDING P+P IF YOU SUPPLY THE BLANKS!**

SO NOW WE'RE THE BEST WE CAN FLAUNT OUR UNDOUBTED SUPERIORITY AND SIMPLY LOOK EXTREMELY SMUG WITH OURSELVES ALL DAY, WRONG! WE WANT TO KEEP THE TITLE AND WORK LIKE LITTLE SQUIRRELS OR OTHER HARD WORKING LITTLE FLUFFY MAMMALS TO KEEP IT! PRICES CONTINUE TO BE LETHALLY LOW, 24 HR TURNAROUND IS NOW GUARANTEED OR YOU GET FREE DISKS FOR EVERY DAY'S DELAY (!), AND NEW TITLES KEEP COMING (OO-ER) IN THE CATDISK. THERE'S NOONE BETTER THAN US, IT'S JUST NOT POSSIBLE I'M AFRAID.... AND A MESSAGE TO ALL WORKBENCH 1.3 USERS, WE STILL SUPPORT YOUR SYSTEM AND HAVE THE LARGEST 1.3 COLLECTION IN THE WORLD, OUR CATDISK WORKS FINE FROM SCRATCH ON 1.3, SO GIVE THE OLD FRIEND A BOOT WITH SOME NEW EXCITEMENT! OR COURSE, WB2 AND AGA AMIGA OWNERS ARE SUPPORTED BETTER THAN A PIG ON STILTS TOO, EVERYONE'S WELCOME, EVERYONE'S CATERED FOR. GOR BLIMEY GAV'NA, GET ON THE V12 LURVE TRAIN AND GO TO HEAVEN!

AND OF COURSE, THE FIRST STEP INTO V12 PALACE (TAKE THE 12TH TURN OFF FROM THE M180) IS THE CATDISKS. WHAT DO YOU WANT FROM A CATDISK, COS IT'S LIKELY WE WILL HAVE INCORPORATED IT INTO THIS BALLISTIC LITTLE DOUBLE BARRELLED BABY! OVER 45,000 LINES OF TEXT, IT WILL AUTOMATICALLY DETECT WHAT MODEL OF AMIGA IT IS IN AND CHANGE AS IT BOOTS TO USE THE SYSTEM TO BEST EFFECT, HAVE A HD AND WANT TO INSTALL BOTH DISKS TO IT? NO PROBLEM, IT'S ONLY ONE MOUSE CLICK AWAY, AS WELL AS ANOTHER ICON TO REMOVE IT ALL TOO! DON'T HAVE A HD BUT WANT TO INSTALL IT TO RAM INSTEAD? NO PROBLEM EITHER, OPTIONAL RAM INSTALLATION FOR OVER 1500% SPEED INCREASE, AND ALL IN 1.5 MEG OF RAM (CHIP OR FAST)! HAVE THE STANDARD 1 MEG AND WANT TO RUN IT COMBINED FROM RAM AND FLOPPY? NO PROBLEM EITHER!! IT WILL INSTALL CERTAIN REGULARLY USED PARTS OF THE CAT FOR A 100% INCREASE IN SPEED! A MOUSE DRIVEN INTERFACE, ANIMATIONS, MUSIC, PICS, STILL HIRES LACED GRAPHICS (EVEN ON AN A500!) AND THE HUMOUROUS LISTINGS THAT WE ARE WELL KNOWN FOR. OH GO ON, ASK FOR IT FREE. YOU KNOW YOU WILL......

AND HERE'S THE GEN ON THE NEWEST 10 DISK PACKS FOR 2.50 INCL P+P!

**HEAVEN & HELL = 10 DISKS COVERING ALL THINGS STRANGE AND ODD, FROM BLACK MAGIC AND POTIONS, TO UFO'S AND MONSTERS. EVERYTHING THAT YOU DON'T TALK ABOUT BUT WANT TO KNOW....**

**ADULT EDUCATION = ANOTHER 10 DISKS PACK, AIMED AT GCSE LEVEL AND ADULT LEARNING, COVERING ALL CURRICULUM SUBJECTS. SURELY A GOOD LEARNING AID IN THE EASE OF YOUR OWN HOME.**

**GET FRESH GAMES = 10 DISKS OF THE LATEST GAMES FOR YOUR AMIGA. ALL THE VERY LATEST GAMES THAT HAVE PROVED SO POPULAR TO ONE AND ALL. GET THIS AND IT'LL KEEP YOU HAPPY FOR AGES..**

**HOME SECRETARY PACK = CONTAINS WORD PROCESSORS, SPREADSHEETS, DATABASES AND BUSINESS TOOLS TO MAKE YOUR WORK LIFE THAT MUCH SIMPLER. ALL THE MOST POPULAR TITLES IN THIS FIELD ARE INCLUDED.**

**SPORTS FANATIC PACK = 10 DISKS OF GAMES TO MAKE YOUR SPORTING DREAMS COME TRUE! CONTAINS ALL THE BEST SPORTS FROM TENNIS, FOOTBALL, GOLF, CAR RACING, YOU NAME IT. GET INTO ALL THE BEST SPORTS WITHOUT MOVING FROM YOUR ARMCHAIR.....**

**HAM HEAVEN - THE REVENGE = SECOND 10 DISK GLAM PACK FOR NON AGA SYSTEMS, CONTAINS ANOTHER 10 DISKS FULL OF THE BEST BABES YOU CAN EXPECT TO SEE THIS SIDE OF BOLIVIA.**

**TRIPPIN' TOONZ = 10 DISKS OF THE BEST MUSIC MODS, SAMPLES & SOUND EFFECTS TO HIT THE COMPUTER WORLD. USE THEM FOR THE CREATION OF YOUR FIRST EVER BALLAD (OR TO SCARE YOUR GRANNY). IT'S UP TO YOU. FOR AN EXTRA 1.00 YOU CAN GET 4 DISKS OF THE BEST MUSIC CREATING PROGRAMS TO FORMULATE YOUR OWN TUNES AND BECOME THE NEXT TOM JONES (IF YOU'D WANT TO..)**

**GET FRESH UTILITIES = THE LATEST UTILS, 10 DISKS AND MORE NEW TOOLS TO EASE YOUR FURROWED BROW. CONTAINS ALL THE BEST TOOLS TO HELP YOU ACHIEVE THE SEEMINGLY UNACHIEVABLE.**

**SUMMER SENSATION PACK = 10 DISKS TO SHUT...ERM PLEASE THE KIDS ON THEIR SUMMER HOLIDAYS, CONTAINS ENOUGH GAMES TO PLEASE THE MOST FRANTIC KIDS, SOME LOVELY DEMOS TO MAKE THEIR EYES POP AND SOME SERIOUS STUFF FOR THEM TO PRETEND THEY'RE USING WHILE YOUR WATCHING. IF YOU WANT SOME PEACE, GET THEM THIS....**

ALL PACKS ARE 10 DISKS, NOT COMPRESSED ONTO ONE OR ANYTHING SCABBY LIKE THAT, AND ALL INCLUDES POSTAGE AND PACKAGING + A FREE CATDISK! WE'RE WAITING FOR EVERYONE ELSE TO MATCH THIS OFFER, WE'RE HERE TO SHOW YOU THAT WE CAN SUPPLY YOU WITH 10 DISKS FOR THE PRICE THAT MOST LIBRARIES SEND YOU 2, IT REALLY IS TRUE! AS MICHAEL JACKSON WOULD SAY ACH, YAH! (OR SUMMAT) ! PACKS ARE NOT LIMITED TO ONE PER PERSON, YOU CAN HAVE ALL TEN IF YOU WISH, OR 10 OF EACH IF YOU ARE SLIGHTLY MAD! PLEASE SPECIFY WHETHER YOU WANT THE CATDISK OR NOT WITH PACKS AS SOME PEOPLE WILL ALREADY HAVE THEM FROM PREVIOUS ORDERS.

FOR A CATDISK, RING THE NUMBER ABOVE, OR WRITE AND ASK. IT'S FREE THIS MONTH SO GET IT AND START SEEING HOW A PD COMPANY SHOULD BE! WHAT HAVE YOU GOT TO LOOSE? WE DON'T BITE YOU KNOW.

GREETS FOR THIS MONTH GO OUT TO WOLFMAN, TOPDOG, FREAK AND BUDDA OF NFA, ICEMAN OF CARNAGE, ICON OF LSD, MICK HEYES, MICHAEL CARTER, OJ SIMPSON, STEFAN MANSIER, CHRIS HORNE (IS IT NEXT MONTH YET?) ROB DAVAIU, RIGSBY, GUNTERHEIM SUPPLIES, MADONNA, KYLIE, DANNI, BONJOVI, KISS, DANNY GIBSON (DMC DESERVES 99%!), TROUSERS MC BERNIE, JACOB GRIZZLY, BENTLEY BELISHA AND FRILLY MIDGE AND ALL THOSE PEOPLE WE'VE TYPICALLY FORGOTTEN.

## FLATBED SCANNING SERVICES

FLATBED SCANNING IS NOW AVAILABLE TO A PROFESSIONAL STANDARD, WITH DPI UPTO 2400 X 2400 DPI, EVERY FILE FORMAT FROM ILBM TO JPEG, AND EVERY RESOLUTION FROM LORES-NTSC TO SUPERHIRES-FULL OVERSCAN PAL AND CUSTOM RESOLUTIONS BEYOND THAT. WE OFFER THIS SERVICE OUT TO ANY PD COMPANY, OR ANY AMIGA BASED COMPANY AT DISCOUNT TRADE PRICES, AND ALSO TO ANY AMIGA OWNING INDIVIDUAL AT THE VERY LOW PRICES, RING US FOR DETAILS, WE ARE AT LEAST 3 TIMES CHEAPER THAN DEDICATED SCANNING BUREAUS. ANY AMIGA COMPANY WHO WISHES TO OFFER OUR SERVICE CAN ARRANGE AN AGREEMENT WITH US FOR SOME SERIOUS DISCOUNTS, SO MAKE THOSE SCANNING DREAMS COME TRUE! REMEMBER ALSO, OUR DIGITISING SERVICE, WHEN ALLIED WITH SCANNING, CAN OFFER COMPUTER REPRESENTATION OF ANY OBJECT, ANY PICTURE UP TO ABOUT 4 SQUARE METERS(!) WITH NO LOSS OF QUALITY. PLEASE RING FOR FURTHER DETAILS.

We stock all the collections including Assassin's 1-250, Fred Fish 1-1000, Scope 1-220, Amigan, Arug, New Zealand, Imagine Object collection, Clipart collection, Barbie, Amos, Legal Tools 1-149 and thousands more. we now also sell CD's cheaper than everyone else, every Amiga CD available is, erm, available from us! 14,000+ TITLES , THATS MORE THAN A LIBRARY WITH LESS THAN THAT!

**14,000+ titles, that's more than a library with less than that!**

VIScorp? VIScorp who? That's right, the Amiga looks as though it has changed hands again. This news came as a surprise to everyone barely 2 days before the World of Amiga show in London. Following Escom's reported $83 million loss and the subsequent resignation of Manfred Schmitt as CEO, Helmut Jost took over with a mandate to drag the German company back into profit. It appears Amiga Technologies is first on their list for rationalisation. As a company outside outside of their general direction (computer retailing) a buyer for the Amiga business is now being sought and Visual Information Services (VIScorp) are the prime candidates.

Just what is VIScorp and what does this mean for the Amiga?

VIScorp, who expect their first product to be available by December 1996, has been formed to produce a

# PD Scene

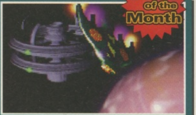
public domain

**All the best of the latest free entertainment software is unearthed by Tony Horgan. Seems like the Aminet is the place to be this month for supplies.**

Demo of the Month

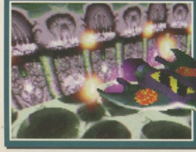
## Glow

### demo



While some 3D demos seem rather pointless at times (lots of unnecessary tunnel sequences and strange tuneless music), this is an excellent example of what can be done when you combine top coders, artists, musicians and ideas. This particular combination have come up a rather excellent little demo. Although it loses a bit of direction half way through, it starts off with a realtime-generated 3D animation with stacks of glow effects and light sourcing. It gets quite abstract after that but still has plenty of tricks up its sleeve.

The soundtrack is pretty fab too, a dubby trip hop thing with some extreme frequencies (watch those ear drums and tweeters!). A very nice production that should restore your faith in the demo scene.

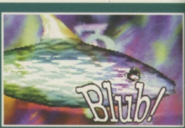


**Available from:**
Aminet. Path:
demo/aga/
tbl_glow.lha,
tbl_glow2.lha,
tbl_glow3.lha
(3 files,
2.47Mb)

**88 %**

## Tint

### demo



What starts off as a fairly tame attempt to emulate the texture-mapping abilities of the PC and consoles eventually turns into quite an entertaining demo, in a laid back kind of a way. Some sections seem a bit on the pointless side especially when you've seen much better on the aforementioned platforms, but this demo is saved from damnation because in places it uses a good 3D engine to produce some interesting effects, like a morphing hand and reflective blobs that split into more blobs.

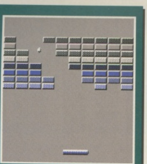
These funky effects and other good parts of the demo are interspersed with the obligatory tunnels, semi-naked women, voxel landscape and Doom-type sections, and some rather excellent hand drawn pictures, backed with a couple of typical Euro-demo modules.

The requirements for this one are AGA with at least 3Mb of Fast RAM and a hard drive. Definitely worth a look if just for the 3D effects alone.

**Available from:**
Aminet. Path:
demo/aga/
TBL_Tint.lha
(4.8Mb)

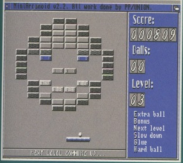
**80 %**

## Mini Arcanoid
### game



I suppose you've guessed what this one is already, even if they have spelt the name differently. So what's there to say about this? Obviously it's Arkanoid, the progression on Breakout that revived the whole bat and ball thing about ten years ago.

I wouldn't normally highlight a Breakout game but this one is particularly neat and works very nicely from the Workbench, so you can bring it up whenever you fancy without risking crashing any more serious projects that may be on the go at the same time. Definitely worth a look even if it's just for sentimental reasons alone.



**Available from:** Aminet. Path: game/wb/arcanoid.lha (91K)

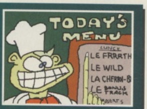
**78 %**

## You know where you can go

In the absence of anything particularly exciting from any other sources, all of this month's PD Scene software was sourced from the Aminet. You can obtain all of these using your FTP client software and following the paths given for each. Alternatively they are on the Aminet Set 3 CD-ROM set available from all good CD-ROM suppliers in this magazine. Finally for non-netted non CD-ROM users, you can call Your Choice PD on 0161 881 8994. They tell them what you want from Aminet and they can send it to you on floppy disks for a nominal fee.

By the way, if you're not netted up, you're missing out on a whole lot! Once you've hooked up you'll wonder how you ever got by without it.

## Soi
### music disk



There are four tunes on the menu of this music disk, presented by some mad chef with a big mouse-controlled finger. The first is a bit crap, but might find takers amongst fans of distorted overdriven drum loops and dodgy edits between loops. The second is a bit more normal, in a tuneless hard techno kind of a way. Number three is one of those tunes that you couldn't imagine coming from anything but your Amiga, while the final 'bonus' tune has a stab at a few melodies but never quite makes it.

**Available from:** Aminet. Path: demo/sound/soi.lha (433K)

**60 %**

## Under the Hammer
### demo

This one is a bit more moody than most demos and concentrates a little more on the slippery 2D kind of effects rather than going overboard on the 3D business. Most of it consists of twirly swirly patterns and strange scrolling backdrops (now there's a surprise) but there's also a Doomy bit and a ... snooze ... spinning cube. At least you're congratulated when you reach the end and declared a 'real demo fan' for sticking it out! Worth a quick download.

**Available from:** Aminet. Path: demo/aga/ZaborUTH.lha (1.52Mb)

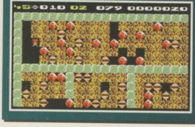
Graphics:
Zibalka
Okinena
Blacky
Dascha

**70 %**

## Boulderdash
### game

This is an excellent copy of the classic C64 game of the same name. For the benefit of those who missed out first time around, Boulderdash is a variation on the Mr Do! theme with bigger scrolling levels that require increasing amounts of brainwork as well as joystick skills. Extreme care has obviously been taken to match up all the graphics, sound and gameplay with the original and the result looks, sounds and feels just the same. The low-tech fx are identical, from the scratchy noise as you run through the mud, through to the crunchy sound of the falling rocks and the high pitched pings of the gems. On the graphics side, the main sprite looks as if he's actually been ported from the original, with all the same expressions and those big eyes. You also get an editor included with the game so you can make up your own variations on the theme.

It doesn't look like much but it's one of those games that proves crap graphics and good gameplay can happily co-exist.



**Available from:** Aminet. Path: game/jump/boulderdaesh.lha (963K)

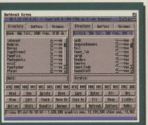
**90 %**

# PD Utilities

**File management, music and art are the chef's special dishes of the day on this month's Public Domain utilities menu. Tony Horgan takes a bite out of each one and decides what's palatable and what's not before he chows down.**

## RO

### file manager



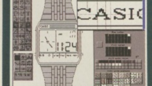
Who knows what RO stands for? There doesn't seem to be any explanation in the documentation. What matters is that it's a compact but powerful file manager in style of Directory Opus. It uses Magic User Interface to handle the front end and alongside the usual functions built in (archive creation and extraction, file type recognition etc.) it's also highly configurable. If your current file manager doesn't cut it any more check this out.

**80 %**

**Available from:** Aminet. Path: util/dir/RO_v122.lha (334K)

## AmiFIG 2.1

### structured drawing



DTP and CAD users could find this useful. While it needs some work before it matches the standard of its commercial counterparts, AmiFIG has a good graphical interface and most of the features you would expect. Drawings can be output as AmiFIG projects, Amiga IFF (the scale of which apparently cannot be altered) and in a range of structured formats such as Postscript, Box, Epic, LaTeX, Pic and PicText.

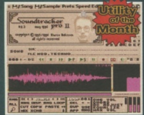
Selecting you output format is a bit awkward. Instead of a window or cycle gadget you need to set arguments for use with a separate converter tool (which you copy to the C: drawer). This unregistered version is limited to saving a maximum of 80 components in any one drawing. Worth a look though.

**79 %**

**Available from:** Aminet. Path: gfx/edit/amifig.lha (224K)

## SoundTracker Pro II 2.3

### tracker



All of you who picked up the May 96 issue of CU Amiga Magazine will have already got your hands on v2.2 of this quick and dirty little tracker. This is a minor update which fixes a few bugs and adds a couple of extra features. You can now load in OctaMED modules with the finetune settings and portamento commands intact. A bug with the sample loop handler has also been fixed and you can now alter the screen colours from the standard 'butterscotch brown' shades.

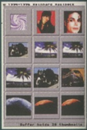
Just in case you missed the cover disk version, I'll tell you it sports some excellent features including a very neat mod-to-sample converter, multiple loops within samples, a three band graphic equaliser in the sample editor and lots more. Highly recommended.

**90 %**

**Available from:** Aminet. Path: mus/edit/pro2.lha (98K)

## Image Desk 3.03

### thumbnail creator



One way of sorting your graphics is to use something like Image Desk. It scans a specified destination of your hard drive and then makes up its own catalogue file of thumbnails. Via Image Desk it can be used to view the pictures in full and gain information on their format, size, colour depth and so on. File formats supported are IFF, GIF, JPEG, PCX, BMP, PCD, PNM, TARGA and any that you have datatypes for.

**78 %**

**Available from:** Aminet. Path: gfx/misc/ImageDesk303.lha (641K)

# CD AMIGA

**Welcome to the only individual section of any Amiga magazine specifically for CD-ROM users. In here you'll find the latest CDs reviewed, a CD round-up and a guide to this month's spectacular cover CD. The Amiga CD-ROM market has virtually exploded in the last year and we've got a compendium of nearly 50 CDs reviewed over the last 10 months to prove it. As yet the amount of new software available is limited, with the market being dominated by picture, font, games and demo compilations, but many utilities like Photogenics and Personal Paint are now being released on the format. The CD-ROM scene is getting bigger and you can rely on us to cover all aspects, every month.**

## CD-ROM Scene

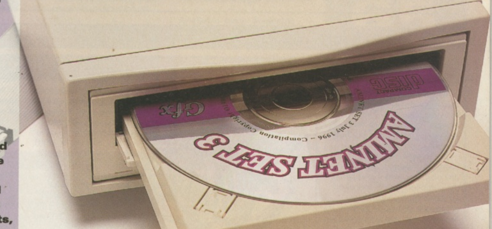
- Aminet Set 3
- Zoom 2
- Sound FX Sensation
- Oh yes ... More Worms
- Sound Library 2

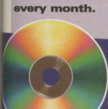
## CDs of the year

A comprehensive listing of the CDs reviewed so far this year

## What's on your cover CD?

All you need to know about your CU Super CD-ROM III





## EXCLUSIVE NEW 7 PAGE CD-ROM GUIDE

# CD-ROM Scene

**Treat your CD drive to a selection of the best new discs. There's something for everyone this month.**

## Aminet Set 3

m Another mammoth four CD pack comes our way with the arrival of Aminet Set 3. The Aminet Set compilations are made up from all the new uploads to the Aminet on-line archive since the last set. This one comes with a complete version of Imagine 4.0, OctaMED 5 and XiPaint 3.2. A flash on the cover also flags 'some commercial games' but don't get too excited about these, they're merely typical PD standard.

As usual with the Aminet CDs the software on the disk is split into categories to make it easier to find what you're after. There's also the usual search tool which will direct you to the relevant CD and will even direct you to software from other Aminet CDs if you wish. Most of the shareware and PD software is included as LHA archives which can be unpacked, viewed, played or executed from the AmigaGuide indexes.

With leading commercial software like Imagine 4.0 and OctaMED 5 included, this looks like a particularly attractive set, but with a price tag of almost £40 these additions are not really 'free' extras (considering the rest of the software has been supplied to the compilers free of charge). But if you could pick two of the Amiga's most often used software packages it would probably be this pair, so I shouldn't think there will be many complaints and all in all it offers the end user excellent value for money.

**Available from: most CD-ROM suppliers advertising in this magazine.**
**Price: £39.95 plus P+P.**

**90** %

## Zoom 2

The second edition of the Zoom CD comes filled with a variety of, ready-to-run PD software spanning the range from games to utilities and anything else in between. Opinions differ on the merits of compressed data CDs and ready-to-run discs but both can work very well.

There seems to be no shortage of good software on this disc, however it's a shame the compilers didn't 'snapshot' all the icons properly before pressing it. It can get very annoying that whenever you open a drawer you get the sub-drawer names overlapping one another, so you have to keep selecting Clean Up from the Workbench menu to see what's available.

As is often the way with these CDs, you'll find yourself having to reset as you browse through the contents and attempt to load software that either kills the system or simply

gurus. The range of software covers music (players, trackers, modules and samples, many of which are the same as on the Sound FX CD also reviewed here), utilities (all sorts of stuff), programming (AMOS, Basic, C, Blitz, Amiga E, Assembly and misc), educational, games (a big mixed bag), Business (mainly accounts and databases), text (various), graphics (converters, icons, 3D tools, video titling, clip art and utilities), slideshows (just two), Magic Workbench bits and bobs, miscellaneous and demo of a forthcoming Get Started CD.

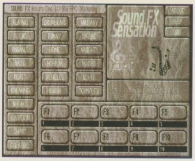
Despite the fairly regular mishaps with software not working properly (trying to write to the CD, assigns not made etc) there is a lot here and plenty of variety.

The software in each section tends to be good stuff rather than any old rubbish to fill it up. If you want an accessible source of the best current PD software this is just the ticket.

**Available from: Epic Marketing, Victoria Centre,**
**138-139 Victoria Road,**
**Swindon, Wiltshire SN1 3BU.**
**Tel: 01793 490988.**
**Price: £19.99 plus £1 P+P.**

**88** %

## Sound FX Sensation



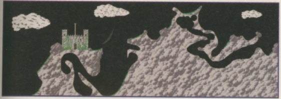
More 'sensational' CD delights come our way from those people up at Epic Marketing. Their latest sensation is of the sonic variety and boasts over 15,000 files. Most of these are 8-bit sound samples with the emphasis on sound effects, although there are plenty of musical samples too. The best thing about the CD is the front end. Although in our tests it quit out regularly for no apparent reason, it's useful as a way of testing out the sounds in each of the categories. Once you click on a category the first ten samples in that group are assigned to the function keys. You can then play any of them using the keyboard. The keys can be assigned to new samples with the use of a barely readable file requester (dark green on black colour scheme) although this often leads to a crash.

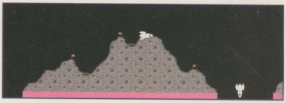
As for the samples themselves, the quality is a little better than I had expected, but there are still far too many poor samples filling up the disc. The law of averages suggests that there will be enough good quality sounds for most people, but that rather depends on what you want the samples for. Musicians would do better going for an audio sample CD, but anyone who needs sound effects for games and demos will find it very useful, unless of course you have a similar CD already, in which case you might find you've got many of these sounds.

**Available from: Epic Marketing, Victoria Centre, 138-139 Victoria Road, Swindon, Wiltshire, SN1 3BU. Tel: 01793 490988. Price: £14.99 plus £1 P+P.**

**78 %**

## Oh Yes ... More Worms!





Worms fanatics can get themselves around 1,000 custom levels and a few sound sample sets in one hit with this CD.

However, compared to the lovingly crafted levels that come with the original game, most of them on Oh Yes ... More Worms! are pretty shabby so don't expect magnificent works of art. But you should find quite a few that play just as well or better than the originals. The replacement samples are a bit thin on the ground. There are six alternative sets, including the one we made up for our last cover CD.

In total the CD contains a 'whopping' 86 Mb. Well, there's no rule that says a CD has to be full to be worthwhile and this is reflected in the price.

Not a bad effort at all for dedicated Wormers but it's hardly inspirational though.

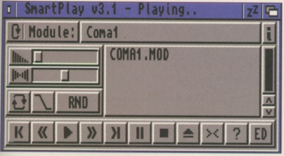
**Available from: Available from: Epic Marketing, Victoria Centre, 138-139 Victoria Road, Swindon, Wiltshire, SN1 3BU. Tel: 01793 490988. Price: £9.99 plus £1 P+P.**

**65 %**

## Sound Library 2

Take one enormous archive of Amiga software, let's say Aminet for example. Then unpack its modules section and put the whole lot onto a CD-ROM with a load of module players. That's pretty much the story with Sound Library 2.

I know what you're thinking (I'm psychic didn't you know?):



can't you get all that from a regular Aminet CD? Well, yes, it would seem you can, although you probably don't get as many mods because Aminet CDs tend to accommodate lots of other types of software.

The bit about putting loads of players on the CD seems to have gone a bit wrong because the main player programs are missing from many of the players' drawers. The mods are split into categories, generally according to their style, which makes it easy enough to find something if you're in the mood for a particular kind of tune.

A good idiot proof player front end would have been nice, though most mod fans will already have their favourite player installed on their system anyway. So in a nutshell, if you haven't already got your 'ultimate' module CD-ROM and you're not bothered about the pathetic players section of this disc, this one is a candidate for your cash.

**Available from: Epic Marketing, Victoria Centre, 138-139 Victoria Road, Swindon, Wiltshire SN1 3BU. Tel: 01793 490988. Price: £14.99 plus £1 P+P.**

# CD Amiga disc compendium

**Here's a round up of the CD-ROMs we've covered in the last year. The good, the bad and the spectacularly good and bad. If you want a CD for your Amiga then check these out ...**

### 1078 Weird textures
***89%** Ground Zero*

Why 1078? Who knows, but the textures on here (for use as backdrops) are all pretty nifty. It's not the most comprehensive collection ever but it's top quality.

### 3D GFX
***91%** Peejay*

Creating your own objects for 3D rendering can be hard, so this disk was launched with lots ready for you to use.

### AGA Experience
***90%** sadENESS*

Packed with demos, slideshows and games this CD was one of the most up-to-date scene collections available on Amiga when first released. Over six months old now, but still good.

### AGA Experience 2
***89%** sadENESS*

This is another superb collection of top demos from all over the world. Like its predecessor it's uncompressed, so there's not as much on here as some other CDs, but it's still very good.

### Aminet 8 (October 95)
***92%** Available from most suppliers*

All the latest and best upgrades from Aminet as of October 95 with a special theme of music modules. Superb stuff.

### Aminet 9 (December 95)
***90%** Available from most suppliers*

This CD's theme is graphics and there is certainly enough to keep most people happy. As usual all the material is from uploads to the gigantic Aminet site.

### Aminet 10 (February 96)
***90%** Available from most suppliers*

More wonderful selections from the Aminet collection.

### Aminet 11 (April 96)
***90%** Available from most suppliers*

See other Aminet reviews. Yet another definitive collection.

### Aminet 12 (June 96)
***91%** Available from most suppliers*

Er, as above. Very highly recommended indeed.

### Arcade Classics Plus
***84%** Epic Marketing*

An improved front end and PD versions of classic arcade games make this CD a top class act.

### Artworx CD
***69%** Weird Science*

A collection of hand drawn and ray traced images taken from demos and the public domain. Some of the material is pretty good but there are some very, very dodgy pics too.

**▼ If you want to find the best in the demo scene then GA EXperience 2 is just what you need.**

### Assasins Ultimate Games Vol 2
***50%** Active Software*

The Assassins are famous for their disk based PD game compilations and this is a CD packed with tons of them. Unfortunately many are extremely poor but the odd gem prevails.

### C64 Sensations
***40%** Epic marketing*

Nowhere near as good as Speccy Sensations, even though it's emulating a much better machine (the Commodore 64). Packed with music pics and demos but not many games.

### C64 Sensations Volume 2
***40%** Epic Marketing*

Where are all those games? This CD is an update of the original but manages to be just as limited.

### Danny Amor's Online Library Volume 1
***80%** GTI*

If you're into Dickens, Robert Louis Stephenson, Mark Twain, the CIA or the Bible then this online library, with over 200 reference sources could be for you.

### EMC Index
***80%** EM Computergraphic*

CDs are a mass storage medium and as such it can be pretty difficult to locate what you're looking for on them. This provides a complete listing with thumbnails for 25 other graphics CDs.

### Euroscene 2
***68%** Almathera*

Packed with Euro demos in LHA and DMS archives, Euroscene is let down by a poor front end, making access difficult. Some of the stuff is pretty good though.

### F1 Licenceware Volume 1
***60%** F1 Licenceware*

Licenceware is really cheap commercial software, and this disc contains mainly games, but also a few utilities and some educational software. There is also an adventure game creator.

### Fresh Fish X
***80%** PD Soft*

A collection of the famous Fred Fish disks on CD. Features business, comms, music, pictures, graphics and utilities. There are very few games and no demos.

### Fresh Fonts Volume 2
***90%** GTI*

Packed with fonts, fonts and more fonts. All of the fonts included on the CD are provided in a wide variety of formats, including DMF, Adobe and Truetype.

### Light ROM 3
***88%** Blittersoft*

Three CDs of objects and images for use with Vista, Real 3D, Cinema 4D and World Construction Set. An entire disc is dedicated to LightWave and one to Vista too.

### LSD 3
***90%** 17-Bit Software*

Packed to the hilt with demos, all playable in a user friendly way straight from the disc. There is also an archived files section with more goodies and there are some utilities and games too.

### Magic Workbench Enhancer
***82%** Epic Marketing*

For those who want to tart up their Workbench, this disc of backdrops will provide plenty of material for a year or two. They all work with Magic Workbench.

### Magic Publisher
***85%** Available from most suppliers*

A massive collection of four CDs designed to be used for both traditional DTP and on-line publishing. Contains full programs, fonts, images and more.

### Mods Anthology Volume 1
***88%** Available from most suppliers*

If you're into music mods this is one CD you won't want to miss.

### Movie Maker Volume 1: Special FX
***89%** Epic Marketing*

This John Pasternak endorsed tutorial CD-ROM is intended to give budding film directors and special effects artists a helping hand with hints and tips from the professionals.

### Net News Offline
***12%** Active Software*

Blatant shovelware straight from the IRCs and newsgroups at the

▲ CD-ROMs are an amazing resource for top class pictures. Above: 3D GFX

end of 1995. The news is old, the opinions drag on. You would be better off getting on-line for real.

### Nothing But GIFs
**89%** *17 Bit Software*
Lots of GIFs and top quality ones too. They range from doodles to digitised images, to fractals. Worth a look.

### Nothing But Tetris
**70%** *Epic Marketing*
Once again the name says it all. This is a collection of more tetris clones than you could ever care to play. And indeed some of them are unplayable. But there are plenty of good ones too.

### Phase 1
**86%** *EM Computergraphic*
Packed with clip art, images and fonts for use with DTP packages and the like. EM Computergraphic are experts in this area so you can expect something very good.

### Phase 2
**89%** *EM Computergraphic*
A comprehensive collection of mono IFF, Colour IFF and EPS clip art files plus images in 16, 256 colour and Ham-6. You also get PageStream support updates and ProDraw fonts.

### Phase 3
**85%** *EM Computergraphic*
Following on from the previous two Phase products, EM Computergraphic pack another disk with very high quality images, fonts and clip art. Well worth a look if you're into DTP.

### Phase 4 – Desktop Video Dreams
**89%** *EM Computergraphic*
Unlike Phase 1-3, which are primarily for Desk Top Publishing users, Phase 4 concentrates on material for Desk Top Video producers. High quality control makes it a must for anyone considering branching into DTP

### Scene Storm
**91%** *Active Software*
If you're into the demo scene then this disc is absolutely essential. It is an easily accessible collection of the best from all over Europe and includes an MPEG player for AGA Amigas.

### Super Autos 94/95
**70%** *PD Soft*
112 Images of cars from a German motor show. Not to everybody's cuppa, but there are plenty of file formats and the quality of the pictures is excellent. For motor fanatics.

### Texture Portfolio
**91%** *Ground Zero*
A collection of 24-bit textures and backdrops, this CD is really enhanced by a book which is included containing a complete listing of what's on the disc. Superb.

### The Colour Library 1
**70%** *PD-Soft*
A disc full of images with a rather neat and fast picture viewer. The quality of some of the images leaves something to be desired though.

### The Epic Collection
**78%** *Epic*
A large part of the well established Epic PD library compressed using DMS and archived onto one CD. All of the software has to be de archived onto disk but the variety is good.

### The Fifth Dimension
**88%** *17 Bit Software*
This one is Packed with games, demos, utilities and graphics. All files on The Fifth Dimension are packed in DMS form and have to be unarchived to disk. Quality is excellent though.

### The Global Amiga Experience
**89%** *PD Soft*
Packed with demo versions of Image FX 2.0, Scala 1.13, Vista Pro1.0, Distant Suns 4.0, X-Copy, Clarissa 1.1 and many more utilities, you won't go far wrong with this CD.

### The UFO Phenomenon
**61%** *17 Bit Software*
The Roswell incident and friends are covered in this CD, released to coincide with X-Files mania. To be honest you'd need to be a bit of a fanatic to trawl through it, especially all the text.

### Tools Unlimited Vol 1
**70%** *PD Soft*
This CD concentrates on screen blankers and suffers from this. There's only so much you can do with one of these little numbers, and while some of them are great there's really too much here.

### TurboCalc 2.1
**89%** *PD Soft*
A commercial spreadsheet program with an abundance of support files and several different language versions. Its usability is enhanced by a powerful built-in programming language.

### Utilities Experience Volume 1
**90%** *sadENESS*
A first class collection of utilities. Includes emulators, workbench utilities and business software.

### Workbench Add-on
**84%** *GTI*
Increase your productivity with this CD packed with comms, utilities, development tools etc. Most of it is ready to run straight from the disk which is a major advantage.

### World Atlas
**82%** *WiseDome*
The kind of thing that CD has always promised us, World Atlas is just what the title says with maps, geographical and demographical details and more.

### Zero G Datafile 1
**79%** *Time and Space*
This is not an Amiga CD-ROM, but if you have a music package like OctaMED then you will have no problems using it. Contains lots of top samples. ■

# LITTLE OFFICE 2

New Release includes
550 Business Letters
Word Processor
Calendar
Name & Address Database
**All this for only £1.99**
*COMPATIBLE WITH ALL AMIGA*

# Harddrive & disk drive space doubler

Epu V1.6 this doubles the size of your HD or DISK Drive storage capacity. RECOMMEND

U871 EPU V1.6 only .99p
SUITABLE FOR WB2/3

# HARDWARE PROJECT III

Build dozens of project. Include an a accelerator for an A500 for less than £15 install 3.5 HD in your A600 & A1200. Put your A500/A600/A1200 in a towercase for less than £30. Use 1.44 PC disk drive on your Amiga. Add an Pocket Modem to your Amiga & many many more this could save you £££... (not for beginner) ........................3 disk pack only £5

# MAGIC WB & EXTRA DISK

This is the cheapest way to obtain Magic WB extra, Each pack below will fill 12 disks when unpacked. (very easy to unpack via click a few button)

MAGIC WB EXTRA PACK (01-12) 1..........£6.99
MAGIC WB EXTRA PACK (13-24) 2..........£7.99
MAGIC WB EXTRA PACK (25-36) 3..........£7.99

AGA21 MAGIC WB V1.2 THE LATEST MAGIC WB FOR A1200
U995 MAGIC WB 1.3 this is for the A500 1.3/A500plus & A600

# Magic BackDrop

This is ideal for use with Magic WB or normal A1200 WorkB (WB2 users require NICKPREF to use the backdrop)

Various Back Drop I (4)..........£3.96
Various Back Drop II (2)..........£1.98
Sexy BACKDROP..........£0.99
NEW AMIGA LOGO BD..........£0.99
Magic Scenery BD (2)..........£1.98
Glamour Face..........£1.98
All New BackDrop 96 (5)..........£4.95

WE ALSO STOCK THE ENTIRE COLLECTION OF LSD TOOLS 1-150 SCOPE 1-220 FRED FISH 1-1000 ASSASSIN GAMES 1-200 ETC

# What's on Super

## What's in your drawers?

**You'll notice that the CD is divided up into drawers. Here's a breakdown of what to expect in each of them.**

**Magazine:** Easy Calc tutorial and Graphics Masterclass tutorial examples.

**Workbench:** the items needed to get your CD up and running.

**Brian Lara:** September CU Amiga Magazine floppy disk demo of Brian Lara Cricket '96 demo. See page 12 for more information about the game and loading details

**Graphics:** a large directory containing graphics applications and images. You'll also find reader competition submissions, an excellent demo of the brand new German ArtEffect package, image processors, image converters and Animation packages.

**Sadeness:** a Sadeness software special drawer containing previews of five of their excellent CD-ROMs: Utilities Experience Vol 1, AGA Experience volumes 1 and 2 and Graphics Experience Vol 1.

**Sound:** a large directory containing the readers competition modules, another brilliant collection of 8 and 16-bit samples specifically created for CUCD3. A new version of AlgoMusic, MIDI utilities and a whole host of excellent audio applications/tools.

**Misc:** readers demos and utilities/applications sent in for the CUCD competition. There are also a variety of must-have tools such as the latest VirusZ, Executive (with bonus CUCD3 only utils), AmiCDFS2 and much more, including a comprehensive collection of ShapeShifter Macintosh emulation tools, Mac System 7.0.1 and the latest ShapeShifter 3.5. In addition, the entire Gnu 'GCC' C compiler package is included for die-hard programmers.

**Games:** contains commercial games demos such as Capital Punishment (see page 12 for playing details) in addition to shareware games such as the 43Mb FMV adventure 'Murder' and the excellent Doom clone Trapped. Readers' games sent in for the CUCD competition round off the collection.

**NewIcons3:** the NewIcons Version 3 package, a collection of Workbench backdrops and massive collection of NewIcons to suit.

**Previews:** four superb CD-ROM previews of commercial CD-ROMs reside in this drawer. Active Software Scene Storm demo collection and Daniel Armar's Blanker Collection, Colour Fountain colour fonts and the brilliant Workbench AddOn CD.

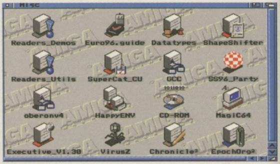
**WWW:** this special directory contains two World Wide Web browsers for use with the massive collection of Amiga related web sites included on CUCD3. For the first time these can be viewed without access to the Internet. The brand new revolutionary Internet software Miami is included to make getting on the Internet much more simple. Magic Web Maker is also included to make your own WWW pages.

**VistaLite:** as on the floppy edition of CU Amiga, this drawer contains the full commercial Vista Pro Lite landscape creation package. As an added bonus, nearly 50Mb of Vista DEM files have been included.

**Just look at how many quality packages we've got crammed onto CUCD3. Who'd have thought it possible? The best just got better.**

## Misc

There's way too much material in here to cover but the essentials include Executive 1.30, the new Amiga replacement task scheduler to improve multitasking. There's also some exclusive CUCD3 tools for Executive such as the new Dashboard from the forthcoming Executive 2.0 package. The Oberon V4 and Gnu C Compiler packages are provided for programmers looking for some good PD options. A collection of the best datatypes can be found as well as the Amiga's best CD-ROM file system, AmiCDFS, inside the CD-ROM drawer. ShapeShifter users, or would-be ShapeShifter users, are catered for extremely well with the massive collection of SS utilities, SS boot file, the freely redistributable Macintosh System 7.0.1, some ShapeShifter FAQ files and of course the latest 3.5 version of ShapeShifter itself. Note, you'll need a Macintosh of your own to gain access to the ROM image necessary to run ShapeShifter on your Amiga. The latest 1.32 version of the capable anti-virus package VirusZ can be found here. Rounding all this off is the collection of readers Utilities and Demos for the CUCD3 competition, of which there's a great deal to check out.



## Access all areas

**There are two ways of accessing this month's cover mounted Super CD-ROM III. The first is by booting the CD either in a CD32 or any other Amiga with a CD-ROM and suitable CD32 emulation. The second is by simply using the CD via Workbench by booting your own Workbench and then inserting CUCD3 in the CD-ROM. When the CUCD3 icon is clicked on, the 'root' window will open up containing many drawers representing the various genres of material on the CD. However, the first thing that needs doing if you did NOT boot from the CD is to click on the small 'Init CD' icon on the bottom right of the root window. This icon will activate the correct assigns to run much of the software on CUCD3 directly from the CD. It will also activate the brand new NewIcons 3 system exclusively released for CUCD3, see the NewIcons box on page 74.**

## Sound

Here again, all that's necessary to listen to the readers sent-in modules is to open the Readers_Mods drawer and click on the icons. There's so many we've split them up alphabetically. You'll also find a text file detailing the competition results. There's a collection of more Johan Alpmar modules which proved popular from the last CD. A later version of Algomusic will amaze with it's new samples and uncanny ability to pump out random generated music that actually sounds good. Inside the MIDI drawer is a brilliant program called GMPlay which acts as a MIDI slave and can play General MIDI instruments. There's also some MIDI songs to try it out with. Finally the tools directory has many audio creative/editing utilities including the 16-bit shareware Symphonie tracker.

## Graphics

The graphics drawer on CUCD3 has a directory of readers graphics. These pictures can be viewed by simply clicking on the icons which will activate the ViewTek viewer. This picture viewer may cause problems on some Amigas, with those it's better to use a picture viewer such as Visage supplied in the Graphics drawer. Of course, all the pictures can be accessed via a directory utility also.

The directory is heavy on graphics manipulation packages which will need to be installed to your hard drive to work, such as Image Studio, ArtEffect, ImageEngineer, Xtrace and so on. Read the documentation on the programs for a run-down on what they do.

## Audio tracks

In addition to the 550Mb of Amiga software on CUCD3, there's also a special treat in the form of two audio tracks which can be played via your CD-ROM or a standard audio CD player. The first track is a specially produced recording of the winner of the CUD3 Module competition. MainVein by William Morton, whilst originally an 8-bit module, has been specially remixed in 16-bit digital audio and cut direct to CD with no analogue stage. What this means is that the module can be heard in full CD quality 16-bit glory which is far better than a module player could hope to reproduce. Congratulations to William Morton who receives a copy of OctaMED Sound Studio, sample CDs and his own Gold CD of his modules.

The second audio track is also something special for CU Amiga Magazine readers, it's an audio recording of a 16-bit module created by our own Tony 'techno' Horgan in order to show of the capabilities of OctaMED Sound Studio and the 16-bit samples present on CUCD3. See the OctaMED SoundStudio review on page 48. The track is titled Never Enough and Dr Horgan advises you to 'crank it' for the full experience.

*Note:* Some CD audio players can err and fail to mute the data track of CUCD3. For this reason ensure you do NOT play track 1 and skip directly to track 2 and 3.

## A word about programs on CUCD

- As with CUCD2, there's so much material on CUCD3 that it would be folly to try and document every program. We have made sure every program is provided on the CD uncompressed and essentially ready-to-run unless otherwise stated. Most assigns and such forth will have been set up by Init CD but many programs expect to be installed on hard drive. If you experience any difficult running a program, read the documentation which is always provided with the program and try install the program to your own hard drive. This may be no more complex that simply dragging the drawer onto your hard drive or clicking on an Install icon.
- Where readers material is included, there is also a .txt file of the same name to match each file which will have the authors information. You'll need to use a directory utility or toggle 'Show all files' to see these.
- Games in particular are often fussy about the specifics of your machine. Hardware specifications, location of libraries and even software utilities and patches running on your system will affect how they perform. Again refer to the documentation for games which have difficulty running on your Amiga. The Capital Punishment demo, for example, is an AGA game only and needs virtually all your Amigas chip memory (2Mb). It can be run by booting the CD and holding down the left mouse button during boot which will direct CUCD3 to load up Capital Punishment and bypass the Workbench. If booting the CD isn't practical, the game can be run by booting with no start-up sequence, this is detailed fully in the ReadMe! icon within the CapitalPunishment drawer.

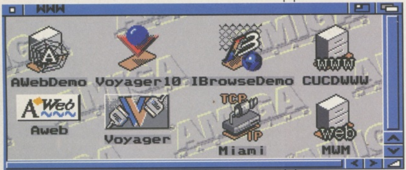
## The WWW on CUCD3

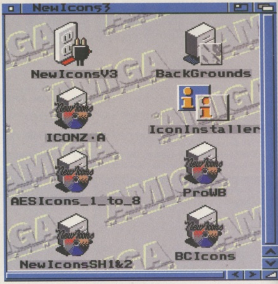


WWW
AWebDemo
Voyager10
IBrowseDemo
CUCDWWW
WWW
AWeb
Aweb
Voyager
TCP
IP
Miami
web
MWM

There are two HTML browsers provided here. The main difference is that one uses MUI and the other does not. Voyager, the MUI browser, will render the HTML more faithfully including backdrops and such forth. If you haven't got MUI installed, you can either run it from the CD by clicking on the 'Init CD' icon or install the latest MUI 3.3 on your own hard drive by clicking on the installer which you'll find in the MUI directory inside the Support drawer. Voyager will run from the CD but will often complain about CUCD3 being write-protected. This is because it tries to cache any images loaded. The best thing is to also install Voyager by opening the Voyager10 drawer and clicking install, you should also have installed MUI yourself. When either AWeb or Voyager is run, to load the HTML on CUCD, select load local file and pick the following file CUCD3:WWW/CUCDWWW/index.html.

If you're interested in the trials and tribulations that went into creating CUCD3, load the file Mat.readme from the root of the CD. There's no icon but you can view it with a text editor or viewer.

## NewIcons



NewIcons3
NewIconsV3
BackGrounds
IconInstaller
ICONZ·A
AESIcons_1_to_8
ProWB
NewIconsSH1&2
BCIcons

NewIcons isn't new, it's been around for some time but this new version 3, exclusively on CUCD3, has some extra features on the old systems. Firstly a brief explanation of what NewIcons are; Workbench icons have no palette of their own. That means if you don't have the palette installed for which the icons were designed they will look discoloured and occasionally down right ugly as in the case of MagicWB. An obvious enhancement would be if each icon could have its own palette which is free to look as it was intended no matter what palette is in use. This is what NewIcons does and the icon images are now stored compressed inside the icon tooltypes. That's not all, finally NewIcons 3 does away with Workbench's icon borders but this is selectable via a preferences tool. Images in the icon tooltypes has another advantage that if you are not running NewIcons, you will see the original icon images if they are present.

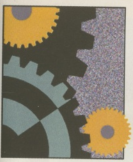
This is the case with CUCD3 and to test this before clicking on the Init CD icon, open up the Misc drawer. You'll see a mixture of standard and Iconographics icons. Now close that window, click on Init CD and open the Misc drawer again. Now you see the wonderful NewIcons.

Be sure to read the documentation on NewIcons 3 within the NewIcons3/NewIconsV3/ drawer. You might like to consider installing the NewIcons3 system on your own workbench from this same drawer. You'll find there's a myriad of NewIcons to pick from on the CD and the Iconographics 'IconInstaller' utility has been moved into that directory to make updating your existing icons easier. Note: NewIcons will attempt to look their best given the available colours, complex icons will look best if the Workbench colour-depth is increased.

## Competition winners

**The standard of readers entries for the CUCD3 competition was very high so we're having a hard time deciding which ones have won. We've already picked a winner for the readers mod competition, the winners of the rest of the categories will be announced next month. Check them out and see which ones you think deserve to win.**

# AmigaWorkshop



**Now we get to heart of the matter. This is the place where we explain, explore and examine all aspects of the Amiga. And there's a chance for you to air your views along with ours.**

### 76 Art Gallery

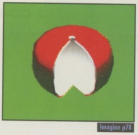
We've got some stunning artwork lined up for you and those who have the CD edition of this issue will have it on disk too.

### 81 Soundlab

Some pertinent questions are asked about multi-channel trackers as we delve deeper into the musical capabilities of the Amiga.

### 86 Comms

The Net feature continues with how to make your own home page look pretty darned good.



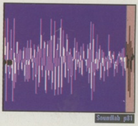
Imagine p78

### 88 Net God

What scandal, gossip and intrigue has our undercover netcop unearthed for us this issue?

### 90 Masterclass

Now that we've kissed Arexx goodbye it's time to start a new series on the delights of the Workbench.



Soundlab p81

### 92 FAQ

And your starter for ten, this month ... what do the letters SCSI actually stand for? Find out this and more.

### 98 Q&A

Even the best of technical wizards need a helping hand from time to time. Don't be shy, write in to the boys if you need some advice.

### 100 Points of View

Alan tells us to get back into our bedrooms while Lisa gets on the case of who is handling Amiga warranties and a reader joins in too.

### 102 Backchat

People are chirpy this month. The Internet FCI offer fan mail keeps pouring in and Amiga goods have been spotted on sale. Good news.

Graphics Masterclass p84

## Tutorials

### 78 Imagine 4.0

Getting things into shape using Imagine's Mold tool is easy and it's perfect for creating visually stunning images.

### 82 Easycalc

For the first in our series on last month's cover disk we've devised a quick and easy way of checking your lottery numbers against the winning ones to see if you've won.

### 84 Graphics Masterclass

Turn to page 84 if you want to learn a few tricks for sprucing up your Workbench. Don't if you're happy with the boring grey tones you already have.

# Art Gallery

**Some superb artwork for you this month and guess what, all these pictures and lots more are on this month's cover mounted CD-ROM.**

# Imagine Tutorial

PART 8

**Bend it, shape it, twist it, anyway you like it. It's all possible thanks to Imagine 3's (CU Amiga Magazine cover disk January 96) Mold tool. And there's not a drop of penicillin or nasty green fungus in sight.**

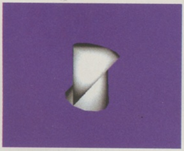
**We touched upon the 'Mold' tool last month, as a way of creating interestingly shaped objects. Let's now look at the various Mold options in slightly more detail. Thankfully none of them deal with a greenish fungus, they control how a primitive shape can be warped into something a great deal more useful.**

**Using Mold is always done in the same way. First of all, in the Detail Editor, create and highlight an object. Then use the Mold menu option (from the Function menu) or press Amiga-E. This will bring up a list of the various options. Here they are in more detail.**

## Spin

Spin works differently from the first two effects and rotates an object around its Z axis. It's useful for creating complex shapes which are symmetrical. For example, think of a lathe creating objects from wood: this is how the spin tool works. The picture below is what we got when we choose a spin angle of 360.

Spin Data
Spin Angle 360.0000
# of Sections 12



▲ Applying Spin to our square doesn't produce anything particularly interesting as it simply folds up around itself.

▲ Applying Spin to an outline object makes for a more interesting shape. Spin makes objects solid and isn't the best for glasses.

## Sweep

Sweep looks like Spin but it keeps the object hollow so it is perfect for items such as glasses or bottles. Once you master this technique you'll use it again and again. Check out below to see how a Sweep angle of 360 produces dramatically different results to the spin effect with the same angle.

Sweep Data
Sweep Angle 360.0000
# of Sections 12

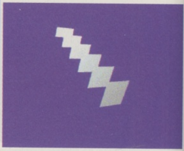
▲ Here's the glass object, this time using Sweep rather than Spin. It looks a lot better. 12 slices should be enough for most objects.

▲ Here is the same glass object, this time rendered in more detail with some attributes set.

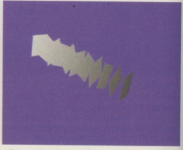
## Replicate

Replicate is very similar to Extrude except that the new object is not solid. Instead, multiple copies are created (five by default). This gives the effect of slices as you can see from the funny-looking picture below.

Replicate Data
To Length
Along Path
Align Y to Path
Keep X Horizontal
Length 100.0000
Copies 5
Mirror Ends
Y Rotation 0.0000
X Scaling 1.0000
Z Scaling 1.0000
X Translate 0.0000
Z Translate 0.0000



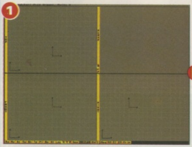
▲ Altering the scaling causes the slices to change in shape as they move away along the length of the original flat object.



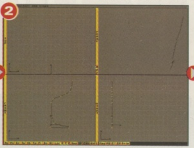
▲ If the rotation value is set, the slices can be made to spin and deform. Try this with solid shapes for bizarre linked chains of objects.

## Making outline objects

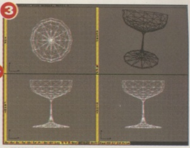
Here is how to make an outline object for use with Mold tools such as Spin and Sweep. You are effectively making an object from nothing, so you have a large degree of control as to what the finished object will look like.



▲ **CREATE AN AXIS** Every object must have an Axis, so use the menu option ADD AXIS to create one.



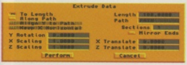
▲ **DRAW THE OUTLINE** Make sure the axis is selected and then pick 'Add Lines' from the Mode Menu. Now draw out your outline.



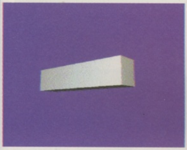
▲ **PROCESS THE OUTLINE** Change back to 'Pick Groups' and the outline will appear. Now you can use Mold/Spin on it to create your object.

## Extrude

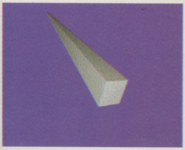
Extrude will stretch out the object, creating a new solid. It has several options which can make a huge difference to how the new object appears. As we saw last month, the stretched component can follow a Path to create weird curved objects or it can stretch in a straight line 'Along Length.' The rotation, scaling and translation settings define how the object should change over its length. Here are some examples.



Length 100.0000
Sections 1
Y Rotation 0.0000
X Scaling 1.0000
Z Scaling 1.0000
X Translate 0.0000
Z Translate 0.0000



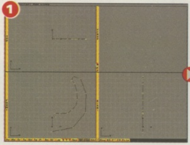
▲ Without rotation, scaling or translation the square plane will be a solid box. Switch off Phong shading to avoid the edges being curved.



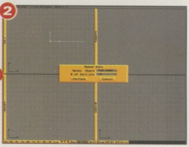
▲ Applying scaling values of 0.1 makes the square shrink as it extends and this causes it to become a pyramid.

## Sweeps with an edge

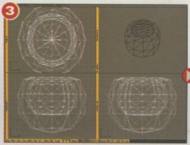
Here is how to make a shape which is hollow, but also has a thickness of its own. It looks rather like an inkwell or a small pot when it is finished.



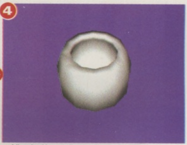
▲ Create an axis and use Add lines to draw an outline. Make the outline double back on itself, like this.



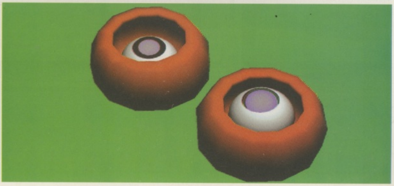
▲ Apply a Sweep (not a Spin) to keep the shape hollow. The default factor of 12 will suffice.



▲ The object will be created. Notice how it now has an edge which is quite thick and yet is still hollow.

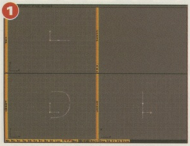


▲ Adjust the objects attributes and render. Here I have kept the Phong setting on to keep it smooth.



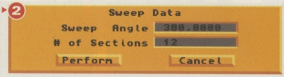
## Halfway sweeps

Sometimes you don't need to make an object sweep round to become a closed shape. For example, here is how you could make up an Edam cheese with a nice big chunk missing.



▲ Create an axis and sketch out the outline of the cheese.

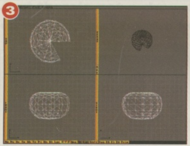
Apply a Sweep but this time alter the 360 setting to 300. ▶



Sweep Data

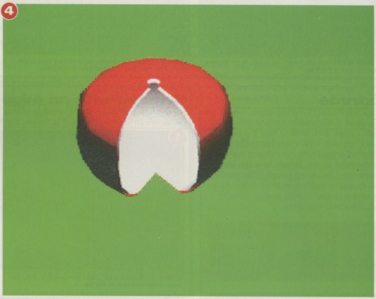
Sweep Angle 300.0000

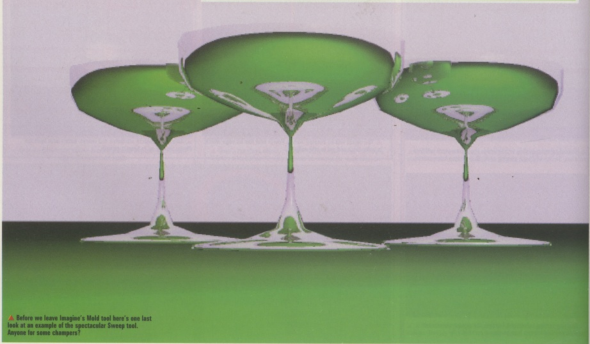
# of Sections 12



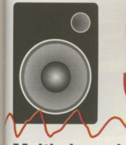
▲ Notice how there is a gap in the object now.

▼ Render the object. I created two objects, one white and one red to produce the cheese-like appearance. Nice!





▲ Before we leave Imagine's Mold tool here's one last look at an example of the spectacular Sweep tool. Anyone for some champers?



# Sound Lab

**Multi-channel trackers are here in force promising audio miracles from your Amiga, but are they all they're cracked up to be?**

The four channel limit of the Amiga's sound chip has caused frustration for Amiga musicians almost since the first Amiga 1000 was released all those years ago. Now that more powerful processors are becoming the norm, tracker programmers are at last finding new ways to overcome this limit.

Many years ago trackers such as Oktalyzer and OctaMED pioneered the technique of doubling up the four channels to make eight. Now there are others such as Symphonie and the new OctaMED SoundStudio offering almost limitless numbers of sample tracks, plus module players like HippoPlayer that offer playback from FastTracker (XM) and ScreamTracker (s3M) modules from the PC. Most of these feature special effects too, such as echoes, simulated reverb and various surround-sound and stereo effects. But how do they work, and are they the solution to all your audio problems?

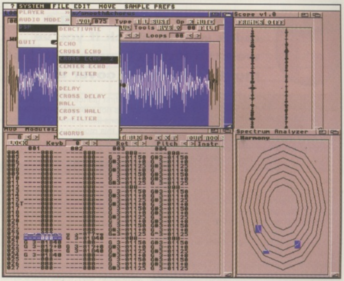
## An extra mixer

In essence a standard four channel tracker program is a fairly simple thing. During playback, the notes and sample information are read in turn from each line of the module and then passed onto the Paula chip which makes the music using the Amiga's built-in sample replay routines. However, the new breed of multi-channel tracker introduces an additional 'mixing' stage. This is where all of the tracks are mixed together into a couple of stereo samples, complete with any panning and special effects processing, then passed onto the Paula chip as a pair of stereo samples to be replayed. Alternatively the combined stereo signal is passed onto a 16-bit sound card, such as Toccata. You could even record straight to an 8-bit or 16-bit disk file, which would create a massive sound sample of the entire module which could then be used to master an audio CD.

The old style approach needs very little CPU power as it makes use of built-in hardware functions (which is why you can have a fast scrolling arcade game with a four channel sound track and no slow-down), but this new mixing method relies heavily on the CPU. This means that the sound quality of the final output will reply on the power of your CPU and also your selected output device.

## Sound quality

Apart from whether you're outputting through an 8 or 16-bit device, the main factor that will govern the overall sound quality is the 'mixing frequency'. In effect this is the sample rate of the final output sound, and as usual higher sample rates (mixing frequencies) will lead to higher fidelity output. Curiously, if you are using a video screen mode (PAL or NTSC) in conjunction with the Amiga's internal audio hardware, you will be limited to a replay rate of 28kHz, even though we at CU Amiga Magazine were under the impression that this limit was lifted with the introduction of AGA. With a fast processor (say a 50mHz 68030) and a Toccata card you should be able to output in 16-bit stereo at 48kHz. If you are using a hard disk file as the output you should also be able to run off a 16-bit stereo 48kHz (or preferable 44.1kHz for CD mastering) file whatever processor you have, because the mixing process will not need to be done in real time.



▲ **Symphonie is one of the new breed of trackers featuring a built-in software digital signal processor (DSP) which smashes the restrictions of four channels and offers features such as echoes and stereo panning.**

## Side effects

There are a few side effects which should be expected. First of all there's the noise which is created and is especially noticeable with lower mixing frequencies. Part of this noise appears as an unpleasant ringing tone harmonic which can be heard in the background, the pitch of which is decided by the mixing frequency. Depending on the particular software you are using, and mainly the mixing frequency, you will also normally experience some loss or distortion of treble frequencies. This can be disguised using 'smoothing' features but these can have the side effect of muting the overall output.

Finally there's the overall volume control. Depending on how many sample tracks you are using and how loud your samples are, this should be adjusted (from the software not your amplifier) so that the samples are scaled properly during the mixing stage so as to give a good loud output (a high signal to noise ratio) without introducing clipping distortion due to excessively high scaling levels.

## There are limits

To be frank, if you're limited to using these new features with the standard Amiga audio hardware, the results will be marred by the noise and distortion that will creep into the sound.

However, if you have a 16-bit sound card (Toccata or Delfina for example) and a decent CPU then things are looking a lot better. You will find a review of OctaMED SoundStudio on page 48 this issue, which contains more specific details of the sound quality available with those two sound cards. ■

AMIGA MAGAZINE

## PART 1

**It could be YOU. Devising a quick way to check if you've won the lottery is easy with last month's EasyCalc cover disk.**

### Return to sender

**A key feature of EasyCalc is the return facility function. How it works is simple: spreadsheet functions carry out a mathematical function and return the value. This means that a calculation is worked out and then the result rather than the formula is shown in the cell . Functions then referring to that cell will see the result rather than the formula, making it possible to carry out calculations based on the result of other previous calculations. For example, the formula that figures out how many winning numbers are present in a row does this by adding up the 1s returned in the checking formula.**

**It's not just numbers that can be returned. Strings, ie text, can also be displayed. The formula that shows how many winning numbers are present displays a text message if there are no correct numbers found. Naturally, you can't carry out mathematical calculations on text messages, although there's no reason an IF function couldn't ask if the cell contains a message, ie**

```
=@if(g9="better luck next
time","it contains a string",
"it contains a number)
```

Lolloping lottery numbers, if last month's cover disk program EasyCalc wasn't superb. As spreadsheets come on the Amiga they don't get much better. The problem with spreadsheets though is that they're not always the easiest applications to get the hang of. It's not just a question of knowing how those complicated cell functions work but understanding how to use them and how to plan a spreadsheet in advance.

At first glance you may think there's not a lot you can do with functions like IF and SUM but there is and this month's tutorial will hopefully show just how powerful they are. To show off these functions we're going to create a spreadsheet that instantly checks lottery numbers.

Nearly everyone plays the National Lottery and many people play more than one row each week (my second row won £10 last week!) and if you do play more than one row you'll know that checking the winning numbers against more than one row at a time is not easy. If you're in a syndicate, with say six or more rows, it can be quite time consuming. Thankfully, this is just the kind of thing that spreadsheets are good at and once we've set EasyCalc up it takes seconds after entering the week's winning numbers to find out if you've won.

### First steps

First we enter the key data: the week's winning numbers. These are entered in to cells A5 to F5, and the player's numbers, the guesses, can be found in cell range A9 to F9. To start off we'll only check one row of numbers, further rows can be added later. To keep things simple we'll also forget any formatting for the time being, using the minimum of explanatory notes on the sheet instead. Each week it's simply a matter of entering the winning numbers into cells A5 to F5 – the spreadsheet will figure out the rest.

**Step 2** Now for the formula, there's one formula for every player number and this formula checks its corresponding number against all of the winning numbers previously entered. If it finds a match the number 1 is inserted into the cell, otherwise zero is placed in the cell – we'll use these results later. The formulae are placed in the cells directly below the player numbers – using EasyCalc's formatting commands we'll hide them later on. In screen shot number 2 you can see them in action, with no correct numbers being found.

**Step 3 (see formula)** This is the real heart of the spreadsheet and it looks terrifying but

=@(if(a9=a5,1,(@if(a9=b5,1,(@if(a9=c5,1,(@if(a9=d5,1,(@if(a9=e5,1,(@if(a9=f5,1,0)))))))))))
```

⑤

```
=@sum(A10:F10)
```

⑥

```
=@if(sum(a10:e10)=0," Better luck next week",@sum(a10:f10))
```

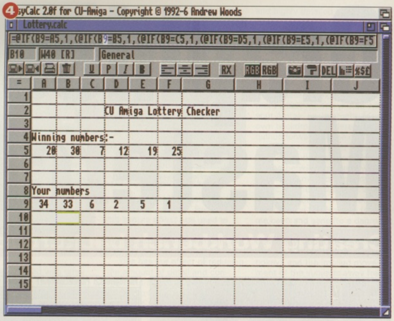
it's really very simple. The IF function is made up of three parts: a question and then two actions, the first is carried out if the question is true, the second if it is false. The formula asks if the cell above it (a player number) matches the first winning entry, if it does the number one is returned, otherwise another IF is used to check the next winning number and so on. See the panel 'Nested Ifs' for more details on this if you're interested.

## A stitch in time ...

**Step 4** To save time retyping the formula afresh into cells B10 to F10 it can be copied and pasted. Enter the formula into cell A10, select the cell and copy it using the menu option `Edit Copy` Now move to cell B10 and select menu `Edit Paste Absolute`. This, however, is still checking the first player number in cell A9, so edit the cell adjusting all references of A9 to B9. Repeat this process for cells C10, D10, E10 and F10 changing the references to A9 to C9, D9, E9 and F9 as you go.

**Step 5 (see formula)** We've now got a spreadsheet that checks player numbers against the winning numbers but this doesn't tell us how many winning numbers we have. By adding up the value of cells A10 to F10 (remembering our check formula returns a 1 for each matching number) we get the number of correct numbers in the row. This also shows how it's important to think through the workings of a spreadsheet in advance. Only by having the checking formula return 1 is it possible for the overall spreadsheet to work.

4



```
=@IF(B9=A5,1,(@IF(B9=B5,1,(@IF(B9=C5,1,(@IF(B9=D5,1,(@IF(B9=E5,1,(@IF(B9=F5
```

| 14 | | | | | | | | | | |
| 15 | | | | | | | | | | |

**Step 6 (see formula)** We've now got the basis of the spreadsheet but we can make it better. By adding an IF statement to the formula in G9 it can be made to only display something if we have one or more winning entries. As it stands now it will show zero as well, which isn't much use. Like the nested IFs used previously the IF statement shown here first asks if the sum of the cells is zero, if it is then it returns a string – a simple message – otherwise it shows the number of correct entries by adding them up again.

**Step 7** For syndicated groups it's a case of copying the player numbers and formula into subsequent rows and adjusting the formula references accordingly so each formula refers to the cells above it rather than A9, B9, etc. You can add as many as you need. And no matter how many lottery numbers you have once the week's winning numbers are entered EasyCalc instantly shows if you've won. This is why spreadsheets are so useful as fast calculating engines.

**Step 8** Finally, with all the formula in place we can use the colour controls. Click on the menu `Edit Colour Set Text` and `Set Background` to make the sheet look like a real lottery sheet. Set the text colour for the formula cells to the same as the background to hide them. The Grid is also turned off, and the `Worksheet Options Lines` menu command is used to add lines around the cells. The lines function will add a vertical line to the left of a cell if one or a vertical column of cells are selected. It will also add a line to the bottom of the cell if a horizontal row of cells are highlighted. ■

**Andy Leaning**

## Nested IFs

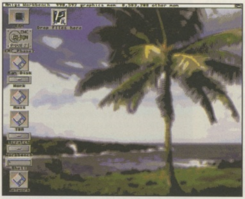
**The formulae all used for our spreadsheet are called 'nested' formulae. This means that arguments to functions don't just have to be numbers or cell references but can also be other functions. The IF statements, as seen in step three, consist of a question, followed by actions to be carried out if the question answer is true or false. If the answer is true (ie a player's number matches a winning number) then 1 is returned, otherwise another IF used, repeating the process but comparing the current player number against the next winning number.**

**The first IF statement, for example, asks if A9=A5 – the first winning number – if it does then 1 is returned, otherwise it asks if A9=B5 again returning 1 if true. This continues comparing A9 with C5, D5, E5 returning 1 every time. Finally, the last winning number is checked, again returning 1 if true, if false however instead of another IF a zero is returned.**

**The IF function can also do more than just check if one number matches another. Other mathematical tests can be applied, including greater than, less than, and not equal to. Try changing the spreadsheet so the formula for how many winning numbers are present only shows if there are three or more of them – ie a £10 win. We'll print the solution for this next month.**

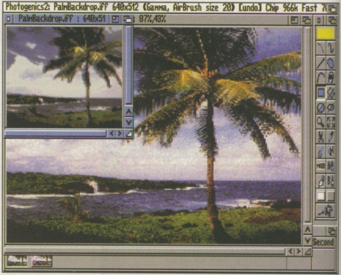
# Graphics Masterclass

## Creating Workbench backdrops



▲ Do not adjust your set. This deliberately blurred backdrop was made from the original image (pictured right) with reduced colour depth and a smaller contrast range.

**Digital wallpaper doesn't have to be all dots and boxes. Give your Amiga the interior decor it deserves.**



Photogenics2: PalmBackdrop.iff 640x512 (Gamma, AirBrush size 20) [undo] Chip 966k Fast 7
PalmBackdrop.iff : 640x51
87%,43%
MODE
Second

▲ Photogenics is great for stylising pictures for use as backdrops. This particular project involves making a blurred and posterised version of the same picture, then using the rub-texture option to affect one with the other.

In the beginning there was a blue screen. Then Commodore had the notion that Amiga users would rather be irradiated with grey photons instead and so they released Workbench 2. While the original did allow the user to alter all four (count 'em) colours of the Workbench screen, release 2 brought with it the opportunity to have the windows and icons hovering over a pretty backdrop or pattern of the user's choice – nothing short of a historic step in 20th century computing history.

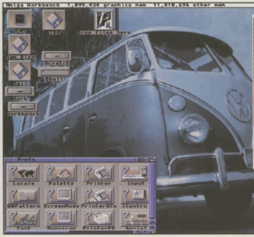
Since then we've been able to slap any picture onto the Workbench backdrop with a few simple selections from the Preferences. However, to reap the full benefits it's worth taking time out to decide just what you want from your backdrop. Well that's obvious isn't it – you want a nice picture to look at don't you? Yes, but if you're going to be looking at this picture on and off for hours on end as you tinker away with your Amiga, you should try to find the most suitable picture, or better still create it yourself.

Fortunately choosing (or creating) your Workbench backdrop is a lot more fun than spending Sunday afternoon trekking around the local DIY superstore.

### Looking good

Unless you've got bags of memory and a nice fast CPU, it's odds on you'll want to use as few colours as possible in your backdrop image. A 256 colour Workbench will use more memory (particularly Chip RAM) and will be slower than one with two colours – but then who wants a two colour Workbench? So unless your system can afford the extravagance of a high resolution high colour backdrop you'll need to find some way of downgrading your backdrop without adversely affecting its quality.

Workbench will automatically perform a colour reduction process on backdrops that have more colours than the current Workbench screen, using dithering to disguise the loss of colours. If you have a JPEG datatype installed, try selecting a 24-bit JPEG image as a backdrop and see how it's dithered and rendered onto your Workbench. On a low-colour Workbench the result is often rather messy, but you can get around this problem by carefully preparing your backdrop picture beforehand so that it looks



Amiga Workbench 1,899,424 graphics mem 11,818,696 other mem

▲ You can always indulge in one of your hobbies, like VW spotting for example. Even so it's still a good idea to re-colour you pictures to avoid too much eye strain.

▲ Soothing space scenes are good for inspiring logical and philosophical thoughts (apparently).

just as good in 64 colours as it does in 16 million.

## A few tricks

If your picture looks rubbish when you drop it to 64, 32 or even 16 colours then you could try using a stylised version instead. The examples here featuring a quaint country cottage and a tropical island scene were both created using the same technique. Photogenics was used in this case and the same effect could probably be achieved with other image processing software.

The source image for both examples was a 256 colour scan of a photograph. This was loaded into Photogenics and then blurred heavily with the defocus effect with the blur level set to six. This was then cloned, and the clone of the original was then processed with the posterise effect using a setting of two colour levels (which reduces the picture to a few areas of solid primary colours). This posterised version was copied to the secondary buffer. Finally the rub-texture effect was used to impose the contours and texture of the posterised version onto the blurred version.

This has the effect of reducing the amount of detail and contrast, but adds an interesting flavour to the picture at the same time. The picture is now made up of relatively few shades and could be displayed with little loss of fidelity on a low-colour Workbench. This particular process also reduces the intensity of the brightest parts of the picture which is quite useful if you want to avoid eyestrain. It also makes it easier to see your windows and icons – a colourful and highly detailed backdrop can confuse things at times.

## Top psychology

If you tend to use your Amiga for long periods of time you could give some thought to backdrops that will subconsciously induce moods and feelings to complement whatever it is you do with your Amiga. For example, for my own backdrop I rendered a tranquil underwater scene of a school of killer whales swimming into the murky distance. The reasoning behind this is that working on this magazine is a mighty hectic business but one that requires a lot of concentration, and the nice whales help to keep me calm and sane (to a degree at least). The key elements here are tranquillity, depth (to make your computer room feel not so pokey), and the implied movement of the subjects away from the user rather than coming out of the screen. Landscape views do the job nicely.

However, you might want your backdrop to do something else for you. Perhaps you make 200 bpm hardcore techno and you want to get in the mood when you boot up – how about a picture of a speeding train coming at you out of the screen or an industrial jackhammer? For those heavy business sessions you could try a nice ordered graph paper pattern to get you into efficient home office mode, which you could easily make yourself using the pattern option rather than a picture backdrop. Got the idea? Oh by the way, feel free to send your favourite backdrops into us for inclusion on forthcoming CU Amiga CD-ROMs. We might even award a roll of wallpaper to the best entry. ■

# Wired World

PART 14

## It's the little things in life that count, so with some help from HTML we can easily link up and add some extras to our home pages.

Last month we looked at how HTML can enable us to set up our own home page including images. This month we explore a bit more about how we can use these images in our pages. There's a few more useful tags that need to be covered yet in addition to the ones used last month though. With a little bit of clever HTML design, your document can develop a style of its own.

## Pretty it up

There's no rule that says you must use images solely for diagrams and such forth, in-line graphics, as they are known, can be used as gadgets or links to add to the overall design. An example of this is the quotation mark on CU Amiga's WWW site. Here's the HTML code that we used to do it:

```
<H3><IMG WIDTH=25 height=20
SRC="genim/lquote.gif">This
intended acquisition... <IMG
WIDTH=25 height=20
SRC="genim/rquote.gif"> <B>Bill
Buck-CEO VIScorp.</B><BR> </H3>
```

In the above HTML code we've selected a nice headline font with the <H3> tag with a left quotation mark, which is a small 25 x 20 sized GIF, to follow. Again we defined the WIDTH and HEIGHT to make the layout look far better for progressive loading browsers such as Netscape and IBrowse.

According to this particular HTML the text, unless told otherwise, will continue on after the included graphic so we need not use any special formatting tags for this example. After the text to be enclosed in quotes is finished, the right quote image is included. This will most probably be wrapped on to the next line if the quoted text is larger than a line at this font size.

If this is to be successful, the size of the GIF will have to be smaller or match the font sized used. Otherwise there'll be a gap between the lines of text which looks messy. After our quote, bold is turned on with the <B> tag for the name of the quotes. This is, of course, terminated with </B> and the entire block terminated with the </H3> tag.

## Wraparound

What happens if we want to wrap an entire body of text around an included picture that's wider than a single line? In this case we'll need to use some special formatting attributes, in this case 'ALIGN'. A very nice application of 'ALIGN' is to use it embedded in an <IMG> tag like this;

```
<IMG ALIGN=left SRC="pic.gif">
```

This will align the picture to the left-hand side of the page. This is not a big deal since it does this anyway if there was no preceeding text. It does, however, have an additional effect in that any following text will continue to word wrap around the picture.

The second line won't jump to where the picture ends as with ALIGN=top, mid or bottom, it will continue to wrap. This creates a newspaper/magazine type impression of a picture embedded within a ream of text. The same will occur if ALIGN=right is used except the picture will be right justified with the text flowing on the left.

It's important to note that you can't change font sizes and include some more complex tags while the text is wrapping around the picture. Most browsers will jump to where the picture finishes before doing that.

So, how do you deliberately make the text not wrap around the picture but start after the picture? With the help of another special attribute in the form of 'CLEAR'. An example would be <BR CLEAR=all> which would execute a return and clear the current justification. Any following text will be after the included in-line graphic.

## Linking up

We'll get onto some more complex image handling techniques later but first we'll look at the most important aspect of HTML: linking to other HTML documents. Linking HTML documents is the heart of the World Wide Web or WWW. This allows anyone to create a page of particular relevance to a topic which could be linked to other pages of a similar topic. This means someone who has successfully found one page of interest could very well find links to other pages on the same topic.

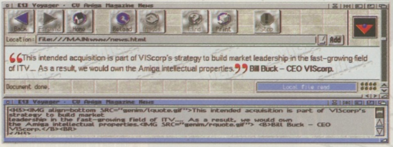
Linking can also be used to break up a lot of HTML into smaller pages. This is useful for HTML as documentation and disk-magazines etc. For example, check out the massive HTML site on this month's CUCD-III.

Using linking is quite simple, there's a special tag simply called <A>. Here's an example:

```
<A HREF="new.html">This is another
HTML document</A>
```

The HREF attribute specifies where the link will connect to. As with in-line graphics and the SRC attribute, full path names can be specified including completely different sites. In this case, without the full http://address. com segment at the start, browsers will assume it's on the current site in the same directory. The text in between the <A> tag and the terminated </A> tag will be highlighted. Normally it'll be red if you haven't been to that link before or blue if you have.

In this way any block of text from a word



File:///MAIN:www/news.html

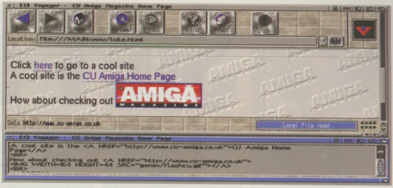
“This intended acquisition is part of VIScorp's strategy to build market leadership in the fast-growing field of ITV.... As a result, we would own the Amiga intellectual properties.” **Bill Buck – CEO VIScorp.**

```
<H3><IMG align=bottom SRC="genim/lquote.gif">This intended acquisition is part of VIScorp's
strategy to build market
leadership in the fast-growing field of ITV.... As a result, we would own
the Amiga intellectual properties.<IMG SRC="genim/rquote.gif"> <B>Bill Buck - CEO
VIScorp.</B><BR>
</H3>
```

▲ Here's an example including pictures with no special justification. The quotes are small 25 x 20 images.

## All this free space

**For InternetFCI/CU Amiga 'TheNet' package users, there's one aspect of setting up your own WWW home page that we rather foolishly neglected to mention. You must notify InternetFCI that you want your free 512K of web space set up. Users of lesser platforms don't tend to use their WWW space, according to InternetFCI, but they report that the interest in WWW space on the Amiga side is much higher. So if you're just getting started on your WWW site, call InternetFCI on their new support number of 01273-763040 or Email them at support@hove.internetfci.com. If you're not already on the InternetFCI support mailing list, Email 'subscribe amigafci' in the body of an Email to listserv@cu-amiga.co.uk.**



E13 Voyager · CU Amiga Magazine Home Page

Location: file:///MAIN:www/tute.html

Click here to go to a cool site
A cool site is the CU Amiga Home Page

How about checking out AMIGA MAGAZINE

Goto http://www.cu-amiga.co.uk

E13 Voyager · CU Amiga Magazine Home Page

```
A cool site is the <A HREF="http://www.cu-amiga.co.uk">CU Amiga Home
Page</A>
<BR>
How about checking out <A HREF="http://www.cu-amiga.co.uk">
<IMG WIDTH=164 HEIGHT=44 SRC="genim/flashcu.gif"></A>
<BR>
```

▲ Here's a link in action, click on the appropriate place and you're off to one of the best web sites around (modesty, sheer modesty).

to a whole paragraph can be turned into a link in many different ways. One common method is;

```
Click <A HREF="new.html">here</A>
for another HTML document
```

Which will mean the word 'here' is just the link or;

```
A cool Amiga Magazine is <A
HREF="http://www.cu-amiga.co.uk">CU
Amiga Magazine</A>
```

Where the link is the description of where it is that it's going to.

Note in this example that the link would send the browser to a totally new site. Obviously there's not much point using http: if the page is only on disk and not on the Internet. Text links are the most common type of link but you can put just about anything between the <A> and </A> that you link including pictures. Pictures are great since they're a great way of making a link without having to say what it is. Here's an example of what we did to get the CU Amiga Magazine banner at the top of our home page;

```
<A HREF="http://www.cu-
amiga.co.uk"><IMG
SRC="cu_banner.gif"></A>
```

This line will include the picture cu_banner.gif but there'll be a red border around the picture indicating that it's a link. Clicking on the picture will again send the browser to the CU Amiga Magazine WWW site. Again if the browser has this site in its cache, the border will be blue instead. Sometimes this border effect can look messy if the included picture is transparent and isn't just a straight rectangle. In this case it's probably best to include the picture but not to make it a link and use a text link instead.

Some web sites make good use of images and links even within their own pages. For instance you could create a bank of buttons with images and turn these into links to navigate your own pages. It's far better to make several pages of a web site than make massive long pages that have to be scrolled through. Bite sized pages can be navigated easily with browser's backwards and forwards buttons whereas scrolling through long pages is not.

Finally, there's always a possibility that the browser being used on your pages isn't a graphical browser. Something like ALynx on the Amiga is an example. It's your call if you support people using such browsers, but if you do it's important to note what changes you'll need to make to make image links and such forth usable for these people.

Firstly, there's a handy attribute used in the <IMG> tag which will display some text if the picture is not loaded. This also looks good on some graphical browsers before the pictures appear. This is the ALT attribute and usage is simple.

```
<IMG ALT="A picture" SRC="picture.gif">
```

Now the text 'A picture' will be displayed in non-graphical browsers and even on some while the picture has yet to be loaded. This is also useful for button links like so;

```
A cool magazine is <A
HREF="http://www.cu-amiga.co.uk>
<IMG ALT="CU Amiga Magazine"
SRC="cu_banner.gif"></A>
```

This example will display the name 'CU Amiga Magazine' if a non-graphical browser is being used or if the picture is loaded. So far we've seen the simple <IMG> tag expand to some length to support progressive loading browsers with the WIDTH and HEIGHT attributes and now non-graphical browsers with the ALT attribute. While this makes for long tags for simple images, I still recommend that you include a picture. Perhaps you could program a macro in your text editor to bring up an entire empty IMG tag like so;

```
<IMG WIDTH=x HEIGHT=y ALT="xxx"
SRC="xxx.gif">
```

OK, that's your lot for this month, we'll be back next issue with more from the world of the Internet. ■

## Net God speaks

**There IS a God (besides myself). Why the sudden belief in HIS existence? Well, Holger Kruse has released Miami and it's even better than we thought it would be. Long have we suffered at the hands of AmiTCP which while an extremely competent TCP/IP stack is way too complex for its own good. Now, thanks to Miami anyone with no previous knowledge of the Internet can easily get online. The initialisation program, MiamiInit, is simple and can be set up within minutes. It's a single executable, you run it, press dial and you're on-line - outrageous! What's more, Holger's created the fastest PPP implementation yet seen on the Amiga.**

**The net result, pardon the pun :-), is that Miami is more compact, easier to set-up (understatement of the year) and with markedly better performance.**

**Miami is on sale in the UK for only £25 which is an unbelievably low sum for such a good program. Holger, thank you NetGod is with you.**

# Surf's up!

**Something big happened this month, something really BIG. It's so big that we've dedicated all of this page to it. Miami – come on down.**

## Miami release special

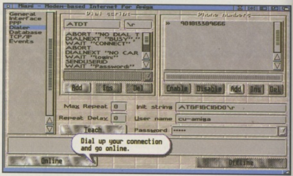
Miami, the new MUI based TCP/IP stack from Holger Kruse, has been released to the public to near universal acclaim. Kruse, a German national living in the US, had been working on the project for nine months in between reading computer science at the University of Central Florida in Orlando.

CU Amiga Magazine caught up Mr Kruse to ask him about more about this spectacular new release.

**Why did you decide to write a program such as Miami?**

"Because I got swamped with complaints about the difficulty of ppp.device and AmiTCP. I wanted to provide an easier solution."

**What do you say to the criticisms about the lack of SANA-2 network driver support?**



```
ATDT   \r
ABORT "NO DIAL T
DIALNEXT "BUSY","
WAIT "CONNECT"
ABORT
DIALNEXT "NO CAR
WAIT "login:"
SENDUSERID
WAIT "Password:"

» 901813389666

Max Repeat    0     Init string  AT&F1&C1&D0\r
Repeat Delay  0     User name    cu-amiga
                    Password     *****
```

▲ Miami itself also has a GUI for the finer points in configuration. All that's needed is to press the Online button and that's exactly what it does.

"Miami was intended as a TCP/IP stack for modem dialup only. This does not require SANA-II. In fact SANA-II usually has disadvantages for SLIP/PPP connections. In future versions of Miami will be extended to support more general types of Internet access (Ethernet etc.), and then Miami will support SANA-II for those interfaces."

**What, if anything, will Miami offer over AmiTCP?**

"Miami is based on a more recent 4.4 version of the BSD networking code whereas AmiTCP is based on 4.3. Miami automatically reconnects after a loss of carrier and it provides better throughput under many circumstances."

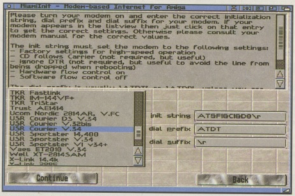
**At the end of the day, everyone wants to know what difference would Miami make to the Amiga community?**

"I think it will allow many users to get onto the Internet who previously found AmiTCP too complicated to setup."

**And is that a good thing? Many would argue that setting up a package like AmiTCP is a rite of passage and guarantees a base level of expertise.**

"I don't agree with this. The commercialisation of the Internet is making the Internet a mass media just like TV. Other platforms (e.g. Win95 and Macintosh) allow easy Internet access as well so why shouldn't the Amiga?"

**So there you have it. If you've not downloaded Miami from the Aminet yet, you can grab it from its own site at http://www. nordic-global.com/Miami.html** ■



```
Please turn your modem on and enter the correct initialization
string, dial prefix and dial suffix for your modem. If your
modem appears in the listview then just click on that entry
to set the correct settings. Otherwise please consult your
modem manual for the correct values.

The init string must set the modem to the following settings:
- Factory settings for high-speed operation
- CD follows Carrier (not required, but useful)
- ignore DTR (not required, but useful to avoid the line from
being dropped when rebooting)
- Hardware flow control on
- Software flow control off

dial prefix   ATDT
dial suffix   \r
```

▲ This is MiamiInit, the first port of call when initialising Miami. It's all GUI driven and interrogates most of what it needs to know directly from the Internet provider.

# Masterclass

PART 1

**Starting off a new series on the Workbench we take you on a guided tour of what all those funny-looking drawers do and are. Take your seats and prepare to be informed.**

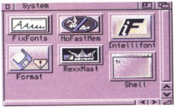
## Masterclass

The Amiga Workbench is the core of the uniquely powerful operating system which is still running rings around other, bigger, bulkier platforms (no names – you know who you are!). However, this power doesn't come cheap and it can be quite confusing try to work out which part does which. This month (and over the next few months) we'll take a look at the Workbench to discover the ins and outs.

First, a global look to examine the more important aspects. Here are some of the most important drawers which are on the Workbench. You may see that your hard drive has an extra icon called 'Trash'. The Trash icon is where you can put old files instead of deleting them – just in case you change your mind and decide you want them back (see the box out 'Removing the Trash') These two pages are a quick summary of what's in each drawer.

## System

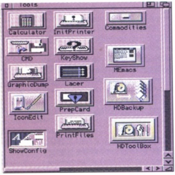
In this drawer you'll find the exceptionally useful Format command and a few other bits and bobs. If your system is a mess like mine obviously is, you'll see another copy of RexxMast (oops..!) NoFastMem switches off all non-Chip memory, and it's useful for ... OK, you got me there. There will also be some font control utilities and the Shell icon (which I use so often I usually leave out on the Workbench).



System
FixFonts
NoFastMem
Intellifont
Format
RexxMast
Shell

## Tools

When is a Tool not a utility? Good question but here you'll find such delights as a pocket calculator, an icon editor, some hard disk utilities and some general printer control programs. PrepCard is only of use if you have a PCMCIA RAM card, Lacer doesn't seem to achieve much and MEmacs is a fearsome text editor. You'll also see another drawer called Commodities and in here you'll find utilities which add little tricks and hot-keys to the Workbench.



Tools
Calculator
InitPrinter
Commodities
CMD
KeyShow
MEmacs

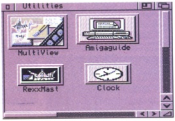
Prefs
WBStartup
fonts

## Utilities

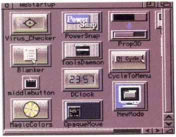
There are some extremely useful programs in here. RexxMast, for example, is the brains behind the ARexx scripting language. Clock tells the time, AmigaGuide provides a hypertext help system and Multiview can display many different file types.



Utilities
MultiView
Amigaguide
RexxMast
Clock

## WBStartUp

If you want a program to automatically start when you load Workbench, this is there you put it. As you can see I have one or two utilities which are started every time I boot up my Amiga.



WBStartup
Virus_Checker
PowerSnap
Prop3D
Blanker
ToolsDaemon
CycleToMenu
middlebutton
DClock
NewMode
MagicColors
OpaqueMove

## Expansion

Sometimes, if you add a particular piece of hardware to your Amiga it will add some special programs into this drawer. Most of the time this isn't necessary, and so even on this heavily expanded A4000 there is nothing in this drawer.

## Magic Icons

Prefs
Font
CVMode

WBStartup
Virus_Checker
Blanker
middlebutton
MagicColors

If you are looking at the screen shots and thinking 'Hey! My icons don't look like that!' there is a good reason. The icons on my Workbench were redefined by a utility called "Magic Workbench". Don't confuse Magic Workbench with Magic User Interface, which adds to the user interface with a new set gadget. Magic Workbench only consists of icons: although very nice ones they are too! An alternative to Magic Workbench is the utility New Icons, which works in a different way but achieves a similar result. Both packages are available for download from Aminet or bulletin boards, or can be purchased from PD Libraries on CD-ROM or floppy disk (Look at the adverts inside for Public Domain houses). Also check out graphics masterclass on page 82 for ideas on making pretty backdrops for your Workbench screen.

## Devs

All the Amiga devices hang out here. To an Amiga, a device could be a Datatype (a description of how to load a particular file format), a Keymap, a RAM disk, or the software required to drive a piece of hardware.

## Removing the Trash

If, like me, you don't bother much with the Trash you can remove it, if you want to.

The problem is that it can only be removed by reformatting the hard drive and that means losing all the existing files stored on it. In other words, don't do this unless you know for sure you have a back-up of everything and that you know how to get the back-up back onto the hard disk.

To format a disk without a Trash icon, use the command:

```
format drive hd0: name Workbench
quick ffs noicons
```

You should substitute the drive name of your disk for "hd0:" and the name of the partition for 'Workbench'. The command line option 'quick' means format the drive quickly, instead of doing it track by track. The 'ffs' means use the 'Fast File System' which is a slightly faster way of doing it and 'noicons' is the word which causes the Trash icon to be left out.

Please remember: doing this will delete all the information stored on the drive so make sure you have a back-up of everything otherwise you're in trouble as you will lose everything. I would advise that you think hard before deciding to do this and then exercise extreme caution if you decide to go ahead. (Headmaster mode off).

## Prefs

This drawer contains all the sub-programs which control various aspects of how the Amiga behaves. Screenmodes, key repeat rates, character sets, colours, fonts, sounds and so on can all be adjusted from here. This window may contain a few more icons than a typical Prefs window.

## Storage

Devices which are not currently being used (i.e. they aren't initiated at boot time) are kept in this drawer. They can then be instigated manually if required. Here, I'm storing devices such as printers, DOSdrivers, monitors, keymaps ... need I go on? You get the idea.

## But there's more!

So you think that's it? Think again! If you go back to the main Workbench window and use the pull-down menu option 'Show All Files' you'll see a load more files and directories which were invisible because they didn't have associated icons. We'll look at this in more detail next month.

# FAQ

## Frequently Asked Questions

### Everything you need to know about everyone's second favourite four letter word: SCSI.

**■ Q. What is SCSI?**

**■ A** Small Computer Systems Interface (SCSI) is a interface standard. It's been going for a long time, although SCSI2 and SCSI3 have updated it a little.

**■ Q. I have a SCSI2 interface, do I have to use SCSI2 drives? What about SCSI drives?**

**■ A** SCSI2 is downwardly compatible with SCSI but not as fast.

**■ Q. Why should I add a SCSI interface?**

**■ A** SCSI makes a lot of things possible such as: hard drives (including large 9Gb drives), CD-ROM drives and removable drives like the Zip, EZ125 and Jaz drives. Some flat bed scanners can work through SCSI much faster than parallel port interfaces). You can also have up to six SCSI peripherals connected at once, unlike IDE.

**■ Q. But I can add IDE hard drives to my A1200 and A4000 very easily — why should I go SCSI?**

**■ A** If you only want to use hard drives there is little point getting a SCSI interface. IDE hard drives are extremely fast and relatively cheap (cheaper than SCSI drives of the same size for example).

**■ Q. Do I need a SCSI interface for CD-ROM drives then?**

**■ A** Strictly speaking no, you don't. Adding a SCSI CD-ROM drive to a SCSI interface (for example, a Squirrel) is easy but it's also possible to use the internal IDE interface by means of the ATAPI software/cable system.

**■ Q. Is there anything which positively, absolutely requires SCSI?**

**■ A** Yes: the removable hard drives (Zip etc) are currently only available in SCSI and IBM-PC Parallel Port formats. The Parallel Port version will most definitely not operate with the Amiga. Also, the Siamese PC/Amiga hybrid system requires a SCSI interface.

**■ Q. Is that it? Why is it still made then?**

**■ A** As far as desktop computers go, SCSI hard drives are usually not necessary: especially as IDE drives are now so fast. However, in the Big-Bad World SCSI drives are especially useful in Network server machines – not least because of their speed. SCSI hard drives are also available in special 'FAST' and 'WIDE' formats which means data can be shifted in 32 bit packets for yet more speed. These drives are useful for high-end digital video and audio editing systems.

**■ Q. What are AV drives?**

**■ A** A class of drive which is suitable for Audio Visual work. This means they are very fast and that they should do without the auto-calibration which other drives do every so often.

**■ Q. I have a hard drive connected to my A1200 via the PCMCIA slot. How can I connect a SCSI interface?**

**■ A** You can't connect two PCMCIA peripherals at once, so this rules out the popular Squirrel and Surf Squirrel at once. There are two methods to choose from at the moment. Firstly, a piece of hardware called the DataFlier SCSI rather cleverly adds a SCSI interface by adapting the internal IDE interface. Secondly, many A1200 accelerator cards will accept extra SCSI interface modules.

**■ Q. What hardware do I need to add a SCSI hard drive to an Amiga with a SCSI interface?**

**■ A** If you have a 'big box' Amiga, then you can mount the SCSI hard drive inside the case and use a standard 50 way SCSI ribbon cable to connect everything. If you have an A1200 with a SCSI interface, you'll need some way to mount and power the SCSI hard drive. You can buy small cases especially designed to hold one or two drives, or you could even make use of a small PC case. Both these solutions usually come complete with power supplies. You could also fit a CD-ROM drive into the case at the same time.

**■ Q. What software do I need to add a SCSI hard drive to an Amiga with a SCSI interface?**

**■ A** Depending on the interface, you should have received some utility software for partitioning and formatting the drive. At the very least you should find that there is a new software device in the Amiga such as 'warpdrive.device' which you can then use with standard Amiga software such as HDToolBox.

**■ Q. What hardware do I need to add a SCSI CD-ROM drive to an Amiga with a SCSI interface?**

**■ A** The same as for adding a hard drive.

**■ Q. What software do I need to add a SCSI CD-ROM drive to an Amiga with a SCSI interface?**

**■ A** You don't need to format or partition a CD-ROM drive but you need software to enable the Amiga to read the disks. Workbench 3.1 includes a CD-ROM FileSystem but there is also a package available from Aminet called 'AmiCD-ROM'. BlitterSoft also sell a commercial version which includes CD32 emulation.

**■ Q. Can I connect any SCSI hardware to an Amiga fitted with a SCSI interface?**

**■ A** You can connect it but whether it will work is another matter. There must be driving software available, so exotic tape drives and flatbed scanners might seem a bargain: but check that Amiga software is available first.

**■ Q. What is termination and do I need it?**

**■ A** SCSI peripherals are all connected in a chain, with the SCSI interface at one end. At the other end there must be 'termination' to prevent corruption of the data. The Terminator is a pack of resistors. Most peripherals have built in termination which can be enabled or disabled by the addition or removal of a jumper or small resistor pack. Only the end devices in the chain need to be terminated. ■

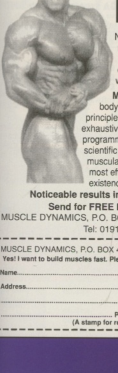
# BUILD MUSCLES FAST!



NEW! Fastest way to build muscles and strength without weights – EVER! Just 35 minutes daily in the privacy of your home will develop an amazing physique.

**MUSCLE DYNAMICS** is a new body building system based on principles developed after years of exhaustive research. It is a total exercise programme involving the very latest scientific breakthroughs in the field of muscular development. It is the fastest, most effective way to build muscles in existence.

**Noticeable results in 28 days guaranteed.**

**Send for FREE Information Pack.**

MUSCLE DYNAMICS, P.O. BOX 40, GATESHEAD, NE8 1PD

| BUSINESS | Spreadsheets, databases, organisers, accounts ... |
| COMMS | Everything you need answering about the internet |
| HELP | Not everything fits into a pigeonhole, but anything you like fits in here. |

# Q&A

**Need a shoulder to cry on about your Amiga? Well a problem shared, as they say, is a problem halved so send your technical questions to Q&A, CU Amiga Magazine Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.**

**I wish I'd had a magazine like CU Amiga to write to when I had problems with my first Amiga.**

**So do I. God knows it's hard being the definitive guides to all things Amiga but, hey, that's what we're here for.**

## Cheap CD-ROM

A friend of mine who owns one of them silly PC things has just upgraded his CD-ROM drive. He said that if I can use his old x2 speed drive with my Amiga 600, I can have it.

So would it be possible to connect it to my machine using the same procedure as fitting a 3.5 inch hard drive to my 2.5 inch IDE interface?

In one of his mags it says that I won't have any trouble but I thought I would ask you as well just to be on the safe side.

**Phillip Jarvis, Gwent.**

*Yes, that should present no problem at all. You'll also need the ATAPI device driver, which is available from PD suppliers and the Aminet on-line archive. Check through the advertisement in this magazine for contacts.*

## Moon on a stick

The following is an excerpt from one very long letter: I unarchived your Imagine 3.0 cover disk just so that I could use the objects, textures, effects, etc [with Imagine 2.0]. But the lens flare and haze effect refuse to load on Imagine 2.0. Is there any way I can get these to work?

Do you have a full version of MUI complete with all the necessary libraries? If so could I send you some disks so you could copy it for me?

It's not that I don't want to pay for the full version because I could download it off a BBS but this way I wouldn't have to pay for the phone bill.

Finally, I own a 9600 bps modem but is there any possible way that I can get a better speed out of it?

**Matthew Stacey, Torrington Nr Devon.**

*No you can't use these effects in Imagine 2 because they were designed for Imagine 3.*

*As for us supplying you with a full MUI system, try elsewhere. And finally your modem: do yourself a favour and buy a new one.*

## New keyboard

I have a few questions that I would like answered. Please help?

1. My A600 keyboard is broken and I was wondering whether an A1200 keyboard would work with it as this will enable me to have a (much needed) number pad. If not, would you tell me how to fit a PC keyboard to my Amiga?
2. I am interested in the Internet but even after reading your bible there are still a few things that I am puzzled about, especially the WWW. Do you need to just have a program to access it or do you need to have an Internet site such as Demon?
3. I am thinking about buying a MIDI interface to use with my keyboard (Yamaha) which has two MIDI ports on the back (in and out). When I use this with OctaMED 5.04 will this enable me to use my keyboard instead of the Amiga one or does it just generate sound samples? Which MIDI interface would you advise me to get?

**Jonathan Archer, Blackburn.**

*1. The ribbon connectors used on the A600 and A1200 keyboards are different so if only for that reason you can't just swop them over. You will need to contact a specialist Amiga repair centre to get a replacement or get it fixed.*
*2. To access the WWW you first need an account with an Internet service provider (the people who connect you to the Internet via a phone call) such as Demon or Internet FCI. Once you have access to the Internet you can use the WWW with some web browsing software, such as Voyager.*
*3. Once you have a MIDI interface you will be able to enter notes from your MIDI keyboard into OctaMED, so it will replace that function of your Amiga keyboard. Obviously it will not replace your Amiga keyboard in other non-musical applications. HiSoft do a good MIDI interface. Call them on 01525 718181.*

## CD options

I have an A1200 with 4Mb of RAM and a 420Mb hard drive. I am thinking of buying a CD32 and linking it to my A1200. Are there any advantages or disadvantages of doing this rather than buying a proper CD-ROM drive?

If I do get a CD32 will I be able to use any of the Aminet CDs or any other major Amiga CD titles, and finally what speed is the CD32? Will it be too slow for using any good software?

**Martin Jerome, Hants.**

*You'll be much better off getting a*

*proper CD drive, such as those offered by Power Computing and HiSoft. That way you can just plug in and go, accessing the CD-ROM like any other drive.*

*The CD32 network option is OK if you have one sitting around, but it's a lot of hassle and the network will be slower and less flexible in use than a CD-ROM that's connected via a Squirrel interface for example.*

*The CD32 drive works at double speed, although some CD32-specific software makes it spin at single speed in order to read certain parts of the disc.*

## PGA tour

I own an Amiga 1200 with a 120Mb hard disk, a Hawk expansion card with a 2Mb Simm and FPU, and a CD-ROM drive.

**1.** My CD-ROM drive has recently stopped working properly. It will read data from the CD and when doing so it usually crashes the computer. Sometimes though it works perfectly (with the same disc). Because of this I took it back to the shop and they said that the computer's power supply is too weak. How can this be? The CD-ROM has its own power supply.

**2.** The sticker on my CD-ROM says 'Zappo' on the top of it, yet all the software, disks and manuals are for the 'Overdrive CD' made by Archos. Do I have the wrong software?

**3.** The eject function in the supplied software no longer works. Why?

**4.** Is my Hawk expansion board PCMCIA friendly? Can I replace my existing 2Mb Simm with a larger 4Mb or 6Mb Simm?

**5.** Is my FPU compatible with the Blizzard accelerators? It has small pins coming out of the side.

**Duncan Strand, Leicester.**

*1. This could be a power supply problem. The combination of a hard drive and a RAM board is often too much for the A1200's inadequate PSU. Try using the CD-ROM without the Hawk RAM board. If it works without the Hawk then it's probably a power thing, although there could be an occasional PCMCIA conflict with your system.*

*2. The Zappo and the Overdrive CD are basically the same units, only with different badges.*

*3. We've no idea on that one. It's probably best to contact whoever supplied with the software for help on that problem.*

*4. If your Hawk worked fine with your CD drive (before these problems) then evidently it is PCMCIA friendly. Yes, you can replace your 2Mb Simm with a bigger one. Check the 'jumpers' on the board which will probably need to be altered depending on the size of the new Simm.*

*5. It sounds like a PLCC type FPU. The Blizzard 1230 boards use PGA type FPUs, so it won't be compatible.*

## Web voyages

I've just signed up on the Internet through Internet FCI with the offer in your magazine. However, Voyager seems to be quite slow with loading images when compared to my friend's P100 PC. We both have the same modem speed. I know that Voyager needs MUI and that this would slow things down quite a bit, but even AWeb, which is a little faster than Voyager, cannot keep up.

**1.** Is this due to my CPU speed?

**2.** If yes to question 1, then would fitting a PLCC FPU to my RAM board speed things up?

**3.** My RAM board has a socket for a crystal. What is a crystal and what does it do?

**4.** Will the crystal speed things up even further?

**5.** What FPUs can be fitted to my RAM board?

**Philip Law, Emailsville.**

*1. Yes. It seems you have a RAM board with no accelerator, in which case (presuming you have an A1200) you are running on a 14MHz 68020. The Pentium P100 processor is much faster than this, so as you would expect, certain tasks take a lot longer on your system.*

*2. No. An FPU would not be used for downloading and decoding pictures.*

*3. The crystal slot is for an FPU. The crystal is used to set the running speed of the FPU.*

*4. A crystal with no FPU will do zilch.*

*5. You don't state which RAM board you have. Check with the manufacturer or supplier.*

## Help is at hand

In response to the letter from Owen Brown in the July 1996 issue (GVP accelerator that plays up after an hour of use) the problems may not be due to any fault with the power supply or the GVP board, but due to a bad connection between the board and the A1200 feature connector.

I had a similar problem I even had the board tested and it checked out fine. However, I cleaned the feature connector and bent the board's connector pins, and then inserted and removed the board a few times. Since then I have had no trouble. Give it a try, it may save you some money.

**J Ettles, Lancashire.**

In reply to Owen Brown's letter, I have had similar problems with my Blizzard accelerator. I found a solution by installing a fan in the trap-door expansion slot, as the problem was caused by the chip overheating and causing the computer to crash intermittently. Also what would I need to do some home video titling on my Amiga?

**Steve Harris, Cheshire.**

*Thanks for those tips. As for what you'll need for video titling, you can get hold of our March 1996 issue which came with the excellent VideoStage Pro cover disk (full program). Alternatively check out Scala. For more information call Scala UK on 01920 444294. You can output Amiga graphics straight to video, but if you want to add titles to an existing tape you'll need a genlock, which is a clever kind of video mixer. Prices start at around £100 (see adverts inside the mag).*

## Say you say me

At the moment I don't have a sampler and was wondering if I could use the speech synthesiser Say command from Workbench and then somehow sample the sound. I've already had a go with AudioMaster and OctaMED 5 but so far with no success. (I have an A1200/020 with a 250Mb hard drive). Please help?

**Oliver Watton, Stalybridge.**

*There's a small program available from the Aminet (also on Aminet Set 1 CD-ROM) called Say2Raw which is supposed to do just that: convert speech synthesis output into raw samples. However, we never managed to get it working. A1200 owners wanting to use the Say tool (which was not included with Workbench 3.0) can take the narrator.device (devs), translator. library (libs) and the Say tool (utilities) from a Workbench 2 disk and copy them to the corresponding parts of the A1200 Workbench.*

## Upgrades

I bought a second-hand Blizzard 1230-III with 50MHz FPU and 1Mb of RAM. Is the SCSI kit for this board still available? The processor on the board is the EC030 but it says in the manual that I can upgrade to a full 68030 MMU 50MHz. Where do I get one and how much will it cost? I need a CD-ROM drive! If I buy an internal one which has been made for a PC case, how do I play audio CDs without a sound card connected to the drive? Or can you buy drives with phono connections and audio controls?

**Andy Kinsella, Bolton.**

*Gordon Harwood Computers (tel: 01773 836 781) are the official distributors for the Blizzard range in the UK. The SCSI add-on is available and they should be able to handle your CPU upgrade too. Call them for price details. Most CD-ROM drives have phono audio jacks and a headphone socket with a volume control, so you can play music CDs straight through your hi-fi or monitor speakers.* ■

## Send your Q&A problems to ...

You can send your technical problems [or answers – Ed] to CU Amiga by the following means:

By letter to Q&A, CU Amiga, Priory Court, 30-32 Farringdon Lane, London, EC1R 3AU.

Email: Q+A@cu Amiga.demon.co.uk.

NO SAES PLEASE We regret that we can't respond to readers' questions by post or over the phone. Please do not include a stamped addressed envelope with your letters, as we simply don't have time to answer the thousands we receive. Responses are only available through the pages of this magazine.

## The trouble with bedrooms ...

> **Now that software is becoming scarcer on Amiga the bedroom programmers are coming to the fore again.**

**By Alan Dykes**

The trouble with your bedroom is that it's YOUR bedroom. Unless you have a room-mate, wife or partner (or you get lucky a lot) there are not a lot of people who get to see the inside of this mysterious cavern and this can be bad for the Amiga.

Bad for the Amiga? Have I gone off my trolley? Have I had one too many Robinson's Barley Waters (which, incidentally, has always made my chin itchy)? Nope. I'm talking about bedroom software development. It has long been acknowledged that the Amiga was a hotbed of software development and young talent. And for many aspiring programmers and artists the bed that got hot was their own.

Bums on beds, fingers on keyboards, monitors burning brightly into the early hours, worried mums and goodbye girlfriends were all the hallmarks of the scene and many current stars are proud to admit that this was they way they started.

Now that software is becoming scarcer on Amiga the bedroom programmers are coming to the fore again. I'm actually using bedroom figuratively here too. If someone produces software at home, for PD or commercial gain, but not for a large publishing company, they are still part of the 'bedroom' cottage industry. You can do this for fun, you can do it for gain, you can do it for fame, you can do it to get a job – the software industry is still crying out for new talent, but you should never do it without help.

### Get help

The guys who made it, the guys who went from their bedroom to a smart house in the country and a flash car were all extremely talented, but even they had help.

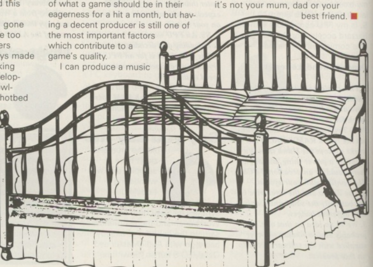
Software publishers fulfil more than just a packaging, marketing and money grabbing role. Good software publishers will also whip a game into shape. A big software house will assign a producer to a game, someone with widespread experience on many games to help it reach a marketable, exciting state.

OK, there has been a sea of crap from software publishers too, in fact it's often the biggest who lose sight of what a game should be in their eagerness for a hit a month, but having a decent producer is still one of the most important factors which contribute to a game's quality.

I can produce a music track which I'm proud of, but which I know is nowhere near as good as what is commercially available. I can cook a curry, but not anywhere near the standard of the Raj Tandoori down the road. Why should someone who produces a passable piece of software by themselves expect it to be a commercial revelation? If you want it to be big, if you want it to be great you need help. Help from someone who knows something about software and isn't afraid to say what's what.

### Objective eyes

If you spend ages doing something you're bound to be blinkered. You might think that what you've created is the best thing since sliced bread but it could just be a pile of poo. So get advice from someone who isn't involved. They don't have to be Martyn Brown or Jon Hare (though this sort of advice, admittedly, would be a definite advantage), they just have to know what they're talking about and the person who's programming has to be able to accept criticism and act upon it. So get rid of the smelly socks, shove those pizza cases under the bed and ask someone up to check out your game or utility. But just make sure it's not your mum, dad or your best friend. ■



■ Alan Dykes is CU Amiga Magazine's Editor and enjoys a good game from time to time.

## A reader writes ...

**By Tom Homer**

Out of the games on my collection of 500 or so disks the only really good ones are Worms and Frontier. 'But what about Breathless, Alien Breed 3D and Gloom?' I hear you ask. Well, all of these are Doom clones. What if we want something new, something original? Something that is not a clone. Worms was an original idea and look how many copies that sold. If the software houses released some good, original material we might be going somewhere instead of trying to out-Doom Doom.

But it's not just the software houses who need to buck their ideas up, Amiga Technologies and VIScorp could do something too: like advertising (now there's a novel idea). Look how many advertisements there are for intel and if you buy an Intel processor you buy a PC. If the only advertisements in the public eye are for PCs how can the Amiga hope to sell? Word of mouth? I don't think so. The Amiga should be aimed at potential PC owners, not at those who would like a PC but can't afford one. 'But it's not as good a games machine as the PC, it doesn't have its capabilities!' you cry. It would have if we had people willing to upgrade their machine to the latest, fastest technology. I'm fed up with A500/A600 owners writing to magazines to complain about cover disks which are AGA only, or need 2Mb RAM. If the software houses continue to write games for A500 then we will get nowhere and stay there.

I've seen letters from A500 owners trying to make their Amigas as good as A1200s. 'How can I fit the AGA chipset? How can I fit more RAM?' they ask: buy An A1200 that's how.

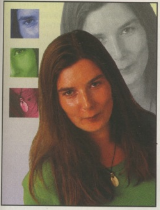
I always thought that shops were around to make money by selling things. This is obviously not the case (millennia of economic philosophy down the drain). At least not where Amiga is concerned. The only Amiga I've seen displayed recently was in a Silica shop in Hull – a badly adjusted and blank grey Workbench screen greeting customers. Really makes you want to buy one doesn't it. Especially as it's sitting next to monitors showing off demos for Playstation? There was a man looking at the Amiga pack in the display case, looking closely, looking interested. Then he saw the grim monitor display and left the shop.

> **"If the software houses continue to write games for A500 then we will get nowhere and stay there."**

What I want to say is that everyone must work together to make the Amiga a success. If it goes down the drain then you are going to have to spend loads more money on a PC anyway so why didn't people just upgrade to the latest specification Amiga when they were available? Why don't they do so now, there are some very good deals. Don't just leave it up to the man in Bury St Edmunds (Lisa Collins, Points Of View, April 1996) to try and get the Amiga selling. Well done that man, you're one of the few who can actually say that they have done anything to help the Amiga. ■

**■ Tom Homer is a CU Amiga Magazine reader and wishes to state that this is not only his opinion but also that of many of his friends and Amiga acquaintances too. He can be contacted at: TOM_HOMER@metnet.demon.co.uk.**

## Guaranteed hassle



**by Lisa Collins**

How do you play pass the parcel Amiga style? You put one player in America, one in Germany and the other in the UK. Then you spend the next couple of months tossing the Amiga back and forth until eventually everyone gets fed up and goes home, leaving the Amiga adrift in the middle of the Atlantic Ocean until someone else comes along and fishes it out.

Maybe things aren't as dire as that but the question of who is actually responsible for any new Amigas sold has seen me telephoning around the globe trying to to find out.

In the midst of all the excitement over the VIScorp takeover there is been one important factor that has been overlooked: who is going to honour the one year warranty, or take responsibility for any new Amiga bought? Or indeed for any current owners whose one year warranty is not yet up. This is particularly relevant now as there seems to have been a recent upsurge of new Amigas being bought. This is, in part, due to shops and catalogues selling Amigas at bargain prices. This is great news as it means there is a new glut of Amiga owners. However, judging by the amount of phonecalls we are receiving, these new owners don't know where to turn to for support if their Amiga is faulty.

To clarify matters I rang around some of the shops that were selling these new Amigas to see if they would honour the warranty. They said they would but some of them didn't even know that VIScorp had bought the Amiga. This begs the question as to who do they intend returning any faulty Amigas to or who will they refer their customers queries to?

This is an appalling situation. I rang VIScorp to find out who is looking after matters on behalf of new A1200 owners. They said that Amiga Technologies still had the right to sell Amigas and would honour the one year warranty on any new Amiga sold. What a relief. However, as I already knew that calls to the now defunct UK AT would prove pointless (although a lot of new owners don't know this), I rang AT in Germany. They confirmed they would be honouring guarantees on any new Amigas bought. I was then given another number to ring to find out the contact number for the UK. I rang it and I was informed that in the UK a company called Digitec (tel: 01952 277 711) would handle any problems with these Amigas. I rang Digitec and they were very helpful and assured me that they would be honouring warranties on new Amigas in the UK. It's not an ideal situation but at least I now know what to tell people when they ring up for help after they too have spent the afternoon ringing around trying to find out who's looking after their warranty. .

> **"In the midst of all the excitement over the VIScorp takeover there's one important factor that has been overlooked."**

So, VIScorp own the Amiga but Amiga Technologies are ultimately responsible for new A1200s and in the UK it's Digitec who handle the queries. And the merry-go-round continues a pace ... ■

**■ Lisa Collins, is CU Amiga Magazine's Deputy Editor.**

# Backchat

**People are happy, happy, this month. What's going on? The Internet FCI offer on the June issue has caused a warm glow in readers' hearts and there are reports of shops actually selling Amigas!!! Things are on the up.**

## The horse's mouth

I read Mr Dykes' comments in the points of view section (July 1996) with great pleasure. He said of the Amiga exactly what I have been saying to my friends when they ask me what computer console I would get and why. Every time I say that I'd get an A1200 or an A4000 Amiga, this is usually greeted with "but isn't an ST or a PC, a better option? Most people I talk to, say that the Amiga is crap. This really annoys me because I have to keep repeating the good points of the Amiga over the ST/PC/Mac machines which is sometimes not as easy as it sounds.

I keep harping on about the friendly Operating System, Workbench and how much easier it is to use than Windows software. For example, I used my dad's Pentium PC running Windows and within a couple of minutes I was confused, disorientated and generally let down. Using Workbench is a breeze compared with Windows, it has no nasty surprises like Windows which (thanks to the terrible online help) caused me to erase something I shouldn't have. I think technophobes would feel relaxed using Workbench, something VIScorp should keep in mind when they are advertising the new Amiga.

I bought my Amiga because it was a cheaper alternative to PCs and Macs, now I've learnt that the Amiga has one of the best operating systems in the world. I think that the Amiga has lots of surprises left even after all these years and it definitely outshines the consoles with its accessibility for programmers and musicians. I wholeheartedly agree with Alan Dykes and my friend is now considering buying an Amiga after I spoke to him. He was originally going to get a second-hand ST to compose music with MIDI software but when I told him about Bars and Pipes and OctaMED and gave him a demonstration of the music packages I had he was impressed. So let that be a lesson to all those who think that the Amiga is at death's door. Even the A500 has what it takes to take on the big boys. Watch out Bill Gates.

**Christopher Neil Hindley, Flintshire.**

## A bit too hard

I think your magazine is by far the best on the market. I have bought it every month for the last three years and will continue to do so. The content is perfectly balanced and if I was asked to make one alteration it would be to gear the tutorials a bit more towards the novices out there. However, I have one question – why do you advertise the issue to be released on a certain date but when I go to the shops it isn't there or isn't expected in for another week?

**Mr F Bate, Cornwall.**

***This letter arrived in just after last month's complaint that the tutorials were too easy! Well, you can't please all of the folk all of the time ... We try to aim our tutorials at novices without patronising more experienced readers. As for the issue not appearing in shops on the due date (which is normally the 15th of every month), we don't know what has happened there as all the issues should appear in major retailers on the given date (sometimes even a little bit earlier). If you want to guarantee that you get a copy place a reserve order with your newsagent. We have passed on the details of the shops that you gave us to our circulation department. Be sure that the matter will be sorted shortly.***

## Do the right thing

After reading the points of view in the July issue, I had to write in. I have upgraded from a A600 to an A1200 using the Escom part exchange deal and have since added an Apollo 1230 accelerator with 4Mb of RAM and attached the Intrinsic Computer Systems multimedia station with quad speed CD-ROM and a gigabyte hard drive.

I am wondering if I have done the right thing. Now I have been trying to buy some decent educational software for my eight year old to use and it is almost an impossibility. Alan Dykes said in his article that the Amiga still outshines the opposition. Maybe it does but no matter how good it is, without the software to go with it, it can never realise its potential. I would like to see firms like Europress supporting the Amiga again, possibly with the software on CD like the PCs and I would also like to see the Dorling Kindersly collection of educational software available on the Amiga. I think that there are many parents out there in Amiga world who feel the same. There must be over 500 CD educational titles available for the PC and that is not counting shareware, so is it any wonder that we are unsure if our loyalties are misplaced. Maybe the advertisers in your magazine could try and convince the software manufacturers that there is virtually untapped market out there.

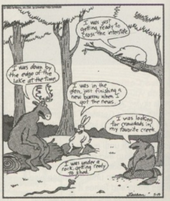
**KR Hunt, Scunthorpe.**

***You have a point there. However, there is some good news – a company called 10 out of 10 Software do an extensive range of educational software on the Amiga. You can contact their distributor Guildhall on 01302 890 000.***

## Songs of praise

I was connected up to the Net with another provider so I read through your Comms Bible and took a look at your Internet FCI offer with great interest (CU Amiga Magazine June 1996). After spending some time reading the book, it took me just about 30 seconds to decide that this was the new provider we were looking for, since the one I was using at that time was at best average, at worst useless. For example, a typical conversation with them regarding problems would go like

**THE FAR SIDE** By GARY LARSON



I was just getting ready to cross the interstate.
I was down by the edge of the lake at the time.
I was in the glen, just finishing a new burrow when I got the news.
I was looking for crawdads in my favorite creek.
I was under a rock, getting ready to shed.

More facts of nature: All forest animals, to this very day, remember exactly where they were and what they were doing when they heard that Bambi's mother had been shot.

this ...**"What is your problem?"**
*"We can not get our mail down",*
**"What machine are you using?"**
*"An Amiga A1200"*
**"Sorry I don't know anything about Amigas."**
This was after trying and re-trying to get through for half an hour. However, when I called Internet FCI it was a different story. When I first contacted them I got an answering service saying they would call me back – they did. Next they detailed what they offered and asked what type of computer and modem I had. I then sent my £20 to them, the next day a engineer called me to tell me everything was ready, then proceeded to explain how to download the software needed and made sure that I had all the necessary instructions.

I then downloaded the software and installed it with ease. I connected to the Net fine, but when I tried again there was a problem, however as it was late in the evening I waited until the next day to call the support line. I was greeted by a very pleasant individual, who listened to my problem, and immediately spotted the difficulty and enabled me to solve it, in a matter of minutes. He then informed me that if I should have any problems whatsoever just to call and they would be there to solve them.

Well, all I can say is, this is the best service I have ever received: from the general enquiry about the services right through to problem solving. I will definitely be taking out permanent membership with them and recommending them to anyone interested in joining the Net Thanks for a brilliant magazine and for introducing Internet FCI to me, an excellent choice.

**Gerry Menzies, Emailand.**

## I bring good news

Regarding the ongoing Amiga Quest saga (CU Amiga Magazine May 1996), I'm a reader who brings good news and I'm a female. In Eastbourne, the Amiga has a smattering of just 10-20 titles on most high street shelves. However, I've discovered a local shop, K RAM Computers, which has stacks of Amiga stuff there including new and secondhand games, loads of PD stuff, Amiga and accessories and as well as offering an advice service they do part exchange deals as well. The shop has recently relocated from the back streets to the high street so business must be good. This shop is a mini heaven and is keeping the Amiga alive and its supporters happy.

**Cindy Wootton, East Sussex.**

## More Net congrats

I am writing as I feel I have to congratulate you and offer my heartfelt thanks to all and particularly to Mat Bettinson. The reason for such an obviously fawning opener? The Internet package you have put together in collaboration with Frontier Communications.

For several months now, I have been following, with growing interest, your 'Wired World' column. I have become fascinated with the Net and all it offers. I became very keen to 'get connected' but I was always put off by the horror stories of the complexities of configuring AmiTCP to establish a stable connection to this incredible resource, despite my knowledge of computers and of my beloved Amiga. Then along came my saviours in the form of Mat and the team at CU Amiga. At last someone had had the foresight and common-sense to create an 'out-of-the-box' package for surfin' wannabes.

It is for this that I am so grateful. Well done, bloody good job! Thanks Mat for sitting down and taking the time to configure this amazingly complex system. You'll be pleased to know that your efforts were greatly appreciated by at least one reader. Your choice of software was good and I have effortlessly become involved in a whole new world, making new friends and instantly feeling a part of a much bigger community. We owe you one!

To my knowledge, this is the first time such a package has been put together for the Amiga, well apart from the much more primitive Demon installer.

You've broken new ground here and I'm sure that many more readers will be encouraged onto the 'net now that you've seen fit to make it so much easier for us.

It is only fitting that I also congratulate Frontier Communications for the part they have played. I have dealt with Gary Hall at FCI a couple of times since I opened my account and he has always been pleased to help. I have also had to call Technical Support once or twice and I was very pleased to speak to someone who obviously had considerable knowledge of the Amiga and the software package. My few problems have been very quickly and painlessly obliterated by the staff there.

So once again, well done, thank you and keep up the good work. With your help, I have entered a whole new dimension of my hobby and I can only urge other readers to follow suit.

**Jonathan Hollin,**
**bluey@thenet.co.uk (Leeds)**

## A little something for you to chew on

There seems to be a lack of definition at the moment about what type of computer the Amiga actually is. The decline in interest in its gaming abilities and its different modern configurations has led to the Amiga being seen increasingly as merely another computer system in direct competition with the PC.

However, the Amiga's elegant OS design and effectiveness for serious software has never been particularly important in its success. The Amiga's largest selling machines have always been specialised for home computer users the vast majority of whom mainly want a computer for graphics-heavy uses, like games but who also want to be able to do basic word processing/art type things and maybe a little programming. By including specialised graphics and sound processors, cutting back on expensive CPUs and expansion ports and putting it all in an integrated unit that can be used without a monitor, the Amiga has traditionally been able to fulfil this purpose with a much better games power to price ratio than a PC business machine could ever manage and this has been its main selling point. To use a motoring analogy, the Amiga could be compared to a car and the PC a large van: they'll both get you about but the van costs more and has practical capabilities in excess of what most people need.

Unfortunately some of the people most recently connected with the Amiga seem to have forgotten that what most home computers buyers want is basically a games console with a keyboard and have made plans for PC-like Amigas that include several expensive non-essential features. The, thankfully, deceased Walker discarded with the cheap one piece A1200 style unit and the specifications for the planned Amiga clone from Phase 5 seem particularly extravagant with video inputs, ISDN interfaces and other things that most people will never use.

Also the tendency to insist that graphics power is not important gives it an image of being an eternal bastion of cheap computing which is entirely untrue. The Amiga became popular as an expensive graphics dream machine, a status which was essential to its success; any new computer needs to represent a true leap in capabilities from established machines if it is to attract the owners and the software support that will keep it out of the plughole. There is a direct link between how impressive a home computer is upon its launch and how popular it subsequently becomes; while Commodore's 64 sold 15 million units by offering the graphics capability of mid 80s game consoles when late 70s ones were the standard, the CD32 was ignored because they were mediocre machines that couldn't do much that already popular machines could manage. The A500 did well but if its graphics capabilities were up to the standard of 16-bit consoles then perhaps all the Americans who held out for powerful PCs would have got one and it would have matched the C64's success.

Any designers of a new Amiga must not forget its valuable role as being a high tech games machine. The only way to make a successful home computer is to anticipate the next generation of computer graphics video from high density CD-ROMs, millions of polygons per second and with a compact and high value machine, get in there first. The survival of the machine depends on it.

**Grant Sutcliffe, Lancashire.**

# Subscribe to CU Amiga Magazine

## And get over £20 worth of free games

**Guarantee delivery of Britain's best Amiga magazine to your door ... and pick up over £20 worth of classic games. That's right, if you subscribe to CU Amiga Magazine right now you'll not only receive the best source of Amiga information before it even hits the shops, you'll also add superb games like Syndicate or Football Glory to your collection at no extra cost.**

### Why CU Amiga Magazine?

- Every month CU Amiga Magazine brings you the latest news on the Amiga scene with exclusive interviews and well informed comment.
- Our renowned tutorials section shows you how to make the most of the Amiga's most popular software packages
- Our reviewers are the best in the business and whether you're interested in technical products and software or games, you can be sure of our authority.
- The best EXCLUSIVE cover disks. Every month we publish cover disks packed with full utilities, demos and the latest games ... look no further.
- CU Amiga Magazine Super CDs

CU Amiga Magazine is the complete solution for Amiga users

### First every month with ...

- News
- Authoritative reviews of products and software
- Games exclusives

### Choose from these superb titles:

| Column A | Column B |

## GET STARTED CD

It's HERE! Zoom release 2 - now ready and in stock for delivery (at last!). Zoom 2 contains all that's new and great from May 1995 to June 1995. All the best PD/shareware will be found on this CD. We included all the best from our library, submissions, the Aminet, BBS's and other contacts. The difference between this and Zoom 1? Zoom 2 is 99% ready-to-run, set in an excellent Magic WB environment and and much more accesible than its predessor. There is so much on Zoom 2 - utilities, tools, productivity, educational programs, business, games, Magic WB stuff, slideshows, documents and much more. There is also an exclusive 'Get Started' demo on the CD for AGA machines. If you want the very latest PD from every conceivable source - Zoom 2 is for you! Zoom release 1 was one the most popular CD's from Summer 1995. Zoom release 2 will be hotter! Get yours before stocks run low!

- Greatest & latest PD from May 1995 - June 1996 : Utils, games, slideshows, education, disk mags and more!
  - *including most of this advert and loads of great PD software*
- **NEW!** Get Started Demo (AGA Machines)
- **NEW!** All the Professional Sound Samples [50 Disks]
- **NEW!** Over 25MB+ of read-to-view/use Magic WB icons etc
- **NEW!** Special 'programming' themed area

**OUT NOW!**

## SPACEBALLS SCENE STORM

Sick of the run-of-the-mill old PD CD releases containg collections from pre-1995?!? This CD contains the complete collection of F1 Licenceware titles from F1-001 to F1-100. Over 100 titles or more than 200 disks! This CD is worth well over £500, if the disks were bought separately. There is something for everyone on the CD - games, utilities, tools, professional clipart and music, beginners guides, educational programs and much more. Some superb material is contained within this CD-Rom: Blackboard v3 (image manipulation), Ultimate Quiz 2 (general quiz), Word Plus Pro (originally valued at £15!), Fortress (strategy God game), Relics of Deldroneye (voted best PD game ever by Amiga Format), ERIC (voted second best PD game ever), Powerbase (databse program), GRAC (superb 'Monkey Island' style adventure game creator with 000's of copies sold on floppy). Introduction to WB (best selling F1 Title), Absolute Beginners Guide to AMOS, Junior Artist (kids paint package) or Tots Time (one of many kids educational programs). Use some of the professional music within your games, with no extra charges. What about the clipart for your DTP documents? AMOS programmers have a field day with this CD - AMOSzine, guide to AMOS and AMOS supplements. Something for everyone. With a very easy to use AmigaGuide© interface with 80% of the programs running straight from the CD. Remember that the programs are commercial, with copyright owned by F1 Licenceware. **All programmers receive a royalty for every CD sold.**

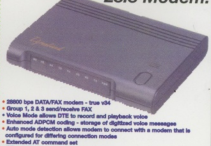
## EASIER THAN ABC!

a. Choose your country
b. Choose an ISP
c. Input a few variables

Wanting to get onto the Internet? NetConnect gives you all you need to get onto and use the Internet. Containing a suite of **commercially licenced** software you won't find an interface as easy-to-use as NetConnect's! We have spoken at length to so many of our customers about getting onto the Internet - we know exactly what you need and what you want. You want software you can USE - not shareware but commercial software, you want the hassle taken out of the installation and you want a suite of the very **best** Amiga Internet software. Indeed, to make NetConnect the very best we organised programmers to enhance their software - so you get previously non-released software. NetConnect contains a full TCP client worth over £35 in itself! You can save masses of £££'s from buying NetConnect as there is no need to licence the Internet software - full versions all licenced for you!

NetConnect's GUI does more than control/manage AmiTCP! It also gives you a completely editable icon bar (see pics), a "Tools Daemon" style menu system and also a time accumulator (which allows you to monitor time on the Internet and costs (which are much cheaper than people think!). No other Internet pack meets the specifications of NetConnect! Ask for a demo version for proof!

## Modem Offer & Specifications
## *28.8 Modem!*



- 28800 bps DATA/FAX modem - true v34
- Group 1, 2 & 3 send/receive FAX
